The three most valuable occurrences of mica are muscovite, phlogopite and biotite. The first mentioned, which is found in a variety of colors, is mined in India, and in lesser degree in German East Africa and Brazil. Phlogopite is worked in India, Ceylon, Canada and Brazil. In order of importance the three chief producing countries are British India, Canada and the United States. cent years are: 1902-3, 20,412 cwts., valued at $426,595; 1903-4, 21,548 cwts., valued at $420,275.

From the technical point of view, Canada affords the most interesting field for inquiry, since it is here that efforts are being made to work the mineral on a substantial and organized scale, and not merely from hand to mouth. The existence of an unlimited supply of cheap labor has occasioned a singular crudity of method in the Indian mines. Although the finest quality, as well as the largest quantity, comes from the peninsula, the proportion is carried on absolutely without the use of machinery, the mineral and the waste material being passed to surface in small baskets by long lines of women, and unwatering operations being carried on by means of jugs.

Throughout the American continent, practice, although more modern, is still, owing to a variety of causes, of an archaean type. Miners in this branch seem peculiarly prone to the vice of dividing their profits up to the hilt, no proper development work being carried on excepting in certain well-known cases. In Canada the open quarry method is still largely followed, notwithstanding the dangers occasioned by the heavy frosts.

In the Lacey mine, Ontario, however, modern machinery is used and the example of adopting the power-drill has been furnished. A high proportion of waste occurs, the finished product averaging only some ten to twenty per cent. of the output. It is hoped, however, that with improved methods of treat-

The exports of the Indian mines in re-

ment the proportion may be made less disadvantageous.

The Canadian output at present shows an inclination to decline, being valued at $166,810 in 1903 and $159,175 in 1904, though estimated as high as $410,960 in 1902. The American output, which is chiefly small mica—the quality most affected by tariff conditions—shows a steady decline in value since 1900. The decline in values at the end of the century was due to a sudden demand for small mica for the micanite industry, which, of course, lowered the average quality of the mineral exported. The industry in India employs about 9,000 persons, and is worked on a $1.25 gross royalty basis.—Mining World.

TURN ON THE LIGHTS.

ELECTRICITY bids fair to turn night into day. Men are constantly striving to do greater things with the marvelous force in which there is both life and death. It is believed that in electricity has been found the ideal light, and in the cities of the country there is a constantly growing demand for its use, a growing effort to apply the light in a new and more effective manner. The little globes blaze by thousands in the streets, in the stores and in the homes. They shine in colors, and they speak to the public from the fronts of business places in the cause of publicity.

Step into the streets of any of the large cities, and the eye is fairly dazzled with the brilliancy and the flash of the little lights. Business men recognize their value, and the city authorities are coming to an understanding of the fact that the people apreciate and demand streets that are illuminated in an attractive and brilliant manner. For instance, Denver is seeking now to be a "city of lights," and it is planned there to make the main thoroughfares almost as light as day by arches spanning the roadways and illuminated with thousands of incandescent bulbs.

A NATIONAL BOYCOTT.

THE Chinese boycott against the United States which went into effect two weeks ago is proving itself a very real thing, and already the Chinese Government have been warned that the United States will insist on the full observance of the Tientsin Treaty of 1858, providing that

> "at each of the ports open to commerce citizens of the United States shall be permitted to import from abroad and sell, purchase and export all merchandise of which the importation or exportation is not prohibited by the laws of the Empire."

Reports from the Orient regarding the progress of the movement are conflicting. On the one hand comes the news that it is extending rapidly. Others incline to the opinion that Chinese merchants are dissatisfied with the outcome. Ex-Minister Wee Ting Fang, of Washington, declares that the spread of the boycott on American goods is a sympton of extraordinary progress toward a real nationality; that the movement has been organized by the best and most representative Chinese and is entirely pacific in character, and that the extent of the movement and the strength of the feeling manifested not only by the mercantile classes but also by the students are indicative of a new spirit in China. At the same time the boycott ought soon to be rendered unnecessary by a satisfactory settlement of the grievances complained of by the Chinese. No difficulty is presented by the exclusion of coolies from United States territory; at the same time the existing regulations press with severity upon other classes, such as merchants, travelers and students, who are compelled to undergo objectionable examinations. A clearer definition of the word "laborer" is essential, and in addition the right of appeal from decisions of immigration officials. Mr. Wee Ting Fang says an educational test would be the most effective means of preventing the ingress of coolies besides eliminating undesirable class distinctions.

Canada is an interested spectator, not only because the crisis will afford her a valuable lesson in international affairs, but because it may accrue greatly to the benefit of Canadian trade. The C.P.R. authorities have already received inquiries from Hong Kong merchants asking as to the feasibility of securing heavy supplies of Canadian flour to replace the American article which they will no longer accept. Canada can supply China with a large amount of soft wheat flour and practically unlimited quantities of the hard western Spring wheat variety.

PLUMBERS' CONVENTION REPORT.

On account of unavoidable circumstances it has been found impossible to give a complete report of the Convention at Winnipeg last week. The report of the banquet, resolutions adopted, committee reports, convention notes, etc., have been held over until next week, when they will be published, together with a report of the Maritime Boards of Trade Convention.

TALKING SHOP.

SEVERAL members of the executive staff of the Pease Foundry Co. entered into a compact a couple of weeks ago not to "talk shop" from Saturday noon till Monday morning, but to give this time to rest and recuperation by thinking of and doing things entirely apart from business matters. The necessity of this action was owing to the strenuous pace the staff had been traveling in order to transact the growing business of the company. The staff showed wisdom in agreeing to cut out the shop talk at such a time. There is a time for everything, but the trouble is that many lack the wisdom to do the proper thing at the right time.

* * *

The editor of Hardware and Metal believes the present to be an opportune time to "talk shop" briefly.

This is the banner year in the Canadian plumbing trade, the banner year for the master plumber, for the supply houses and for the manufacturers. Every branch of the trade is handling all the business possible and few labor strikes have marred the reaping of the harvest of Canada's growing time by the plumbing fraternity.

* * *

This is the banner year for organization in the plumbing trade. The Provincial Conventions in Ontario and British Columbia and the National Convention at Winnipeg are the most important gatherings in the history of the trade in Canada. The number of master plumbers and steamfitters on the inside is steadily increasing and the effectiveness of the organization is reaching its zenith. The supply men and manufacturers in Ontario have also gotten together and a strong and compact organization is now in existence to govern this branch of the trade. Hardware and Metal can claim some credit for aiding in the growth of this organization and it congratulates both master plumbers and supply men for the progress they have made. Organization is the order of the day.

* * *

This is also the banner year for Hardware and Metal, it having practically every live plumber in Canada on its list of subscribers and every up-to-date supply house represented in its advertising columns. The increase of Hardware and Metal's circulation amongst Canadian plumbers during the past year has been marvellous and the publishers can account for the gain only by believing that their efforts to provide a readable, newsy and instructive paper are appreciated. Through this increasing circulation the paper is able to be of greater service to the Master Plumbers' Associations in extending their organization, and to advertisers in giving them results. In our advertising columns will be found the announcements of every progressive supply house deserving the support of our readers. In these announcements the best and most up-to-date goods are advertised, while the reading columns of the paper keep the plumber and steamfitter informed re-

garding the latest novelties and goods introduced to the trade.

* * *

A comparison of this year's Special Plumbing Number with previous issues cannot but impress upon our readers the wonderful advances made in trade organization, in the increasing number of supply houses and manufacturing plants doing business in Canada, and in the marked value of Hardware and Metal and its plumbing department and market reports to the trade. The commendatory letters recently received from Messrs. W. H. Meredith, Ontario secretary, Toronto; J. A. Gordon, Dominion secretary, Montreal; J. Thorp Blyth, association secretary, Ottawa; H. T. Andrews, Orillia; W. A. Loughrey, Amherst, N.S., and many other representative plumbers in Canada indicate the valuable place Hardware and Metal has won for itself amongst its readers. On the other hand the fact that the plumbing advertising in these columns has doubled during the past year proves the paper's value to advertisers as well as indicating the prosperity of the trade generally. Hardware and Metal has made good as the representative Canadian plumbing paper, and its editorial staff is endeavoring to do still better work in order to merit the increasing support being given the paper.

* * *

In addition to the very full and interesting report of the Winnipeg Convention and the many valuable articles on heating and plumbing in this issue, we would draw special attention to Mr. Quinn's article on the ventilation of the new School of Science Building in Toronto. The article deals with the most up-to-date job in Canada and should be especially interesting to plumbers in the smaller towns and country districts, giving as it does the principles upon which they can build their plans for smaller but similar systems in schools and other public buildings in their own districts. Another article dealing with the heating of the same building will be given in a later issue, while it is also proposed to discuss the system in use in the Toronto City Hall, where a humidifier was recently installed, in still another article.

* * *

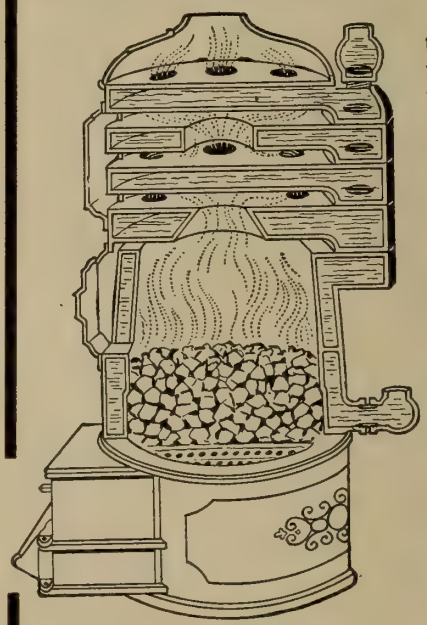
Mr. Quinn endeavors to treat his subjects in the language of the workshop rather than that of the university, and it is pleasing to note that some of the most successful supply men as well as the most intelligent master plumbers (such men as Mr. Edward Gurney, of the Gurney Foundry Co., and Mr. George Clapperton, of Bennett & Wright, Toronto,) have commended Mr. Quinn's articles highly. It is impossible, of course, to cover all the minor details in the articles, but we would again remind our readers that our columns are open for articles or communications criticizing or discussing in detail any points touched upon in any article published.

* * *

We particularly invite questions and letters describing difficult jobs done or obstacles met with by plumbers or steamfitters. W. A. Hillhouse, a progressive plumber at Shelburne, Ont., has promised Hardware and Metal a description and photos of work done on a contract he has under way to instal a hot-water heating system as well as a septic tank and plumbing system in a residence in that town. Plumbers are busy men and not usually given to letter writing, but we trust others will follow Mr. Hillhouse's example. A job illustrated by a blue print or plan will prove of interest to plumbers in all parts of Canada, while a short description of work done or some news telling of contracts secured will also be appreciated by our readers.

* * *

A leading manufacturers' agent who called on Hardware and Metal recently stated that one of the firms represented by him was receiving a very large number of replies in response to an advertisement recently placed in our plumbing department. That is an old story, but it bears repitition.



Another visitor, a retail hardwareman, stated that he subscribed for the Iron Age as well as Hardware and Metal, but he always read our paper from cover to cover in preference to the larger American paper. He said the concise statements and newsy paragraphs, as well as the editorials on local subjects, were what attracted him. He agreed that the comparison might be made with the liking most men have for their local paper if it is capably conducted. Even though a larger and better paper is published in a nearby town, the local paper has the preference because it appeals to the home spirit of the reader.

A letter also comes from a commercial traveler, who is well acquainted with the trade in Canada, in which he says: "Hardware and Metal appears to be a genuine favorite and almost every hardware merchant who will take anything already has it."

THE OXFORD HOT WATER HEATER

Before we presented the OXFORD HOT WATER BOILER ("B" Series) to the trade of Canada we put it to the crucial test of actual use under every natural condition.

All of these tests demonstrated its thorough efficiency and durability and most particularly its economy in the use of fuel. It was our intention to produce a heater from which could be derived the maximum of heating capacity with the least possible amount of fuel and throughout our sixty years of experience in this line of business we have never obtained more satisfactory results.

A most favorable element in construction is the increased diameter of the fire-pot at the bottom, giving the sloping walls expanse of surface directly over the fire: it also prevents the accumulation of ashes and dead fuel around the fire and permits of the most thorough dissemination of heat.

The construction of the grate is worthy of special note. It is of the triangular revolving kind with revolving bars which provide a large air space but do not allow the coal to fall through. The handle is in front of the boiler, and by turning the grate the dead ashes are sharply cut off and with a few extra turns the entire contents can be dumped into the ash-pit. By removing two outside screws any grate-bar can be taken out through the ash-pit door.

The material used greatly lengthens the life of the boiler; in fact, makes it indestructible and unbreakable. It is constructed from steel and iron exclusively—metal to metal joints in every connection. Every heating expert will appreciate the superiority of this method of production over the use of rubber or fabric washers which in other similar goods is the weak link in the chain.

The first water section of the OXFORD BOILER is double the thickness of the other sections and is bell-shaped (larger at the bottom than at the top) giving a much greater surface in direct contact with the action of the fire. This adds very largely to its heating power.

The ash-pit is deep enough to contain a large accumulation, requiring less frequent attention than is usually necessary and an ash-sifter is provided.

We can recommend the OXFORD HOT WATER BOILER to the trade with full assurance that it will give thorough satisfaction and suggest that you send for illustrated catalogue giving complete details.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 82.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 18, 1905.

COOL weather is bringing many Montrealers home from the Summer resorts, and city trade is, consequently picking up, many good assorting orders having been received during the week. Orders are coming in well from country dealers, who are asking for Fall goods.

Sporting goods continue to occupy the most important place in the market, and the demand for cheaper and medium guns, is unprecedented. A few orders, too, are being placed for the expensive English goods. Ammunition is selling very briskly.

Horseblankets, skates and sleigh bells are being extensively inquired for, and there will no doubt be a lively business in these lines when the season is in full swing. So far, the great demand in horseblankets has been for the cheaper grades, but, as most dealers are well stocked up, there has been no exceptional activity as yet.

Axes—Are selling steadily and the price remains firm. Our quotations are: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—The trade is quiet, but healthy. Prices are: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—The demand is fair and it will assuredly pick up in the Fall. Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—Are still dead, in the market, as dealers have not yet sold the big stocks bought during the recent slump in prices. Quotations are: Cold blast, $4.50; No. 0, Safety, $3.50.

Barb Wire—Is a very slow seller, at this season. Prices remain as before: $2.75 for 100 lbs. f. o. b. Montreal; $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—Are another dead issue, and there will be little activity in this line until next season. Our quotations are: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—The demand for these goods is constant, and the market is in a most satisfactory condition. Our quotations are as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—There is no let-up in the usual demand for screws, and good orders are reported by all the jobbers. We give prices as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Business remains very active. No disposition is shown to make any change in prices, which are still as follows: 3-8 and smaller, 60 to 10; seven-sixteenths and larger 55 to 5.

Wire Nails—The large building operations in all parts of the country keep the jobbers busy shipping wire nails at the following prices: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—No activity is apparent on the market, though prices are firm. We quote: $2.20 per keg f.o.b. Montreal.

Horseshoes—Good sales are reported, and there is every prospect of a busy season. We quote: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all 1 to 4. $6.75. Packing—Up to three sizes in a keg, ten cents per hundred pounds. More than three sizes twenty-five cents.

Sporting Goods—Business in this line is tremendous, eclipsing all previous records. We give prices: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—There is practically no movement, and, even for the season, the dullness is phenomenal. There has, however, been no change in prices.

Cordage—A quiet trade is reported. Prices are steady, at our last quotations.

Cement and Firebrick — Contractors are waiting for a settlement of the labor question before placing further orders. ders. Trade, consequently, is quiet. Our quotations are as follows: $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—This is an active branch just now, good orders being received from all parts of the country. We quote as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Spring Hinges—Are very slow, as the season is late. We quote: No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—A fair demand is evident, the prices remaining unchanged. We quote: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—Many orders are being booked for Fall delivery. Prices are 25c. to $2.50, according to quality.

Sleigh Bells— Though the season is young, many inquiries are reported for all lines. Our quotations are as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common 70c. to $1.50, pear shape $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—The advance in jute has raised the prices on horseblankets, and they will be firm all season. Retailers, however, are well stocked, and trade is not very lively. There is every indication that prices will be higher next season. We quote: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12.00; 16-oz. Hessian, unlined, $6.50; 3-4 lined $11.50; full lined, $14.00, and up to $24.00; Kersey blankets, $9.00 to $21.00; all wool, $24.00, $30.00, $48.00, and $60.00.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 18, 1905.

CONSIDERING the season, the general run of business is exceptionally good. Naturally the holiday season tends to keep things rather quiet, and thus the hardwaremen are very well pleased with the way things are going. Sporting goods for the Fall trade are having a very good demand, and the opening of the season in this way predicts well for the weeks to come in this

line. The big demand is for shot guns and shells, the season for rifles of course, coming somewhat later. Washing machines are having a good sale. There is a considerable movement in contractors' supplies of all kinds. Bolts and nuts are rather quiet at present. The chief market for these is in the agricultural machinery manufacturing line and during this season manufacturing in this line is quiet.

There are no changes in prices to report.

Sporting Goods—The demand for Summer goods is about over now, but the season for Fall sporting goods is opening up splendidly. There is already a good demand for shot guns and ammunition. Rifles at present are not a feature.

Washing Machines—There is quite an active demand.

Chain—The ordinary Summer trade is being done. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Dealers are well satisfied with their sales. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Good business is reported at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demands for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—Demand is reported good and country merchants are ordering in fair quantity.

Wire Nails—There is an exceptionally good business being done in this line, due probably to the extensive building operations.

Cut Nails—Trade continues satisfactory. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Trade is particularly good for this season. We quote as follows: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller. $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4. $6.75. If shipped from factory 15c. less.

Horse Nails—A seasonable trade is noted. Prices are the same.

Screws—The mills are busy, but stocks are satisfactory. The strong demand keeps prices firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—The demand for bolts and nuts is quiet, due to its being the slack season in the agricultural machinery interests.

Cordage—Sorting orders are coming in. Prices remain firm at last week's changed prices. We quote as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—There is no change in the market this week. Business is very good. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Business is brisk, demand being strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper— The general activity in building circles has resulted in a good business being done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool—Trade continues in activity. Hides are coming in freely, but not in excess of demand; prices have slightly modified, but more by way of getting to an even basis. We quote as follows:

Hides, No. 1 green steers, per lb		0 10
" " 2 " " "		0 09
" No. 1 green, per lb		0 09½
" " 2 " "		0 08½
Country hides, flats, per lb	0 08½	0 09½
Calf skins, No. 1, selected		0 10
" " No. 2		0 08
Lamb skins, each		0 60
Shorn pelts "		0 55
Rendered tallow, per lb		0 04½
Unwashed wool, new clip, per lb		0 16
Wool-washed fleece	0 25	0 26
Rejections		0 20
Pulled wools, super, per lb	0 21	0 23
" " extra "	0 22	0 24

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 18, 1905.

GREAT excitement in copper is the feature of the week's metal trade. A corner has practically been achieved, and the result is seen in the serious scarcity of ingot casting copper. Whether this is a result of trade conditions, or persistent bulling on the exchange, cannot be determined by the local dealers, though both of these have undoubtedly worked to bring about the present want. The result will almost certainly be a general advance in copper and brass goods. Manufacturers have already withdrawn prices on brass goods, and the effect will be particularly apparent on all staples.

Antimony is now so high in price, that there is practically none selling, as dealers refuse to pay the figure asked. This metal has advanced fully one hundred per cent. in a comparatively short time.

Ingot tin is higher again this week, and indications are that it will remain so. Otherwise the market is without feature, but the general trade is good.

Canada Plates— A slightly lower price is shown in galvanized plates. Current prices are: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4.00, $4.10.

Ingot Tin—A decidedly upward tendency is shown. We quote prices: 35c. to 35 1-2c. per lb.

Pig Lead—The range of prices is narrower this week, the maximum price having been lowered. Our quotations are: $3.75 to $3.85 per 100 lbs.

Boiler Tubes—Prices are slightly easier than in our last report, though trade continues brisk. We give prices: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—The market has settled down to a normal activity. We quote prices:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.25 to 18.75	delivered	Montreal.

Tool Steel—No change in prices has occurred since our last report. Trade is brisk. Our quotations are as follows: Colonial Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c: "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—Shares the general briskness of the metal market. We quote: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2: spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.10; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting — Conditions and prices are unchanged. Our quotations are as follows: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3,50 per 100 lbs.

Galvanized Iron—Much activity is still shown, and prices are firm as follows: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra

Black Sheets—Prices are steady at our last week's figures. We quote: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—The price now ruling is practically prohibitive, and there is

C.F. JACKSON & CO., Limited
Wholesale Merchants
Ormidale Block, Vancouver, B.C., and
Liverpool, England
Direct Importers of:
Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc, etc

scarcely any movement in the market. Prices are: 14 1-2 to 15c.

Sheet Zinc—This is another scarce article. Prices are firm, as follows: Cask lots, $7.25, small lots, $7.50.

Tin Plates—Prices are steady, but may be advanced as a result of the raise in ingot tin. We quote: Cokes, $3.75; charcoal, $4.

Ingot Zinc—The acknowledged shortage on the market has not yet produced a change in prices. Our quotations are: 6 1-4c. to 6 1-2c.

Scrap Metal—The market is much more active than last week, except in scrap iron. Both wrought and cast iron scrap are in very light demand, despite the fact that the American market is steadily advancing. The stocks are small. Our prices are as follows: Copper and wire, 12 3-4s.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 1-4c. machinery cast scrap, $13; wrought scrap, $12; stove-plate scrap, $9; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-2 to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, August 18, 1905.

NOTHING very important is to be noted on the metal market this week, except it is the scarcity of copper. However, that is not serious as yet. There has been quite an active market in bar iron during the past week, and the mills are now running to their full capacity. There is not so much being done on the tin plate market this week. There is a quiet antimony market, due probably to the excessive price. Youghiogheny soft coal is very firm and is advancing gradually.

Bar Iron—There is a very active market. The mills are running to their full capacity. We quote: $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—Market is very strong and buying active. We quote: 35c. to 36c. per lb.

Tin Plates—There is lessening demand this week.

Galvanized Sheets—An excellent demand is reported. Prices are steady.

Brass—Conditions are unchanged, business being fairly active. Discounts continue at 10 per cent.

Lead—The market is strong, with stocks light and demand very active. Prices are very firm. We quote: Pig lead, $4.00 per 100 lb., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—The market has been improving and is now quite active. Prices steady. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Copper is very scarce, but the market is active. The scarcity is not causing any serious inconvenience on the local market as yet. Our quotations are as follows: Ingot copper, 15

OPEN HEARTH STEEL

3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—The high prices on this market are almost prohibitive to buyers, and consequently things are very quiet.

Old Material—The advances in the States have not been sufficient to warrant an increase in the prices on the local market. Dealers' buying prices are: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Youghiogheny soft coal is stiffening very perceptibly, and there is an increase in the quotation. Otherwise prices remain unchanged. Our quotations are as follows: Anthracite in cars at bridges: Grate, $5.15 per gross ton; egg, stove and nut, $5.40 per gross ton; pea, $3.80 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKET.

Advance proofs furnished HARDWARE AND METAL by The Iron Age, August 17, 1905.

IN pig iron the week has been rather quiet, taking the country as a whole. The purchases of the United States Steel Corporation will probably not be made until early in September. In the east there has been a further moderate movement in basic pig, one interest taking 10,000 tons at a concession, while another buyer took 4,000 tons in addition to previous purchases of 8,000 tons. In the Pittsburg district a leading maker of cast iron pipe has bought 10,000 tons of gray forge pig, while in the Chicago district one foundry is in the market for 15,000 tons.

In the east there has been a little wavering as to prices, one large producing company offering iron at somewhat lower figures.

Steel billets are scarce and the situation is rather acute, particularly in the Chicago district. At some points accessible to tidewater small lots of foreign billets have been sold.

It is reported that the Canadian Government has suspended for four months the anti-dumping clause so far as steel billets are concerned, the fact that the two leading Canadian steel works are engaged on rails making it difficult to obtain Canadian steel for the rerolling industries. Our own steel works are so busy, however, that they cannot take advantage of the situation.

Orders for steel rails for 1905 delivery continue to roll in to the works. The Harriman roads have just placed 75,000 tons with the Steel Corporation. It is not known whether this system accepted offers for Pacific Coast delivery made by works in Eastern Germany which are not associated with the other German mills.

In the structural trade the event of the week has been the award of the contract for the new Manhattan Bridge to the Pennsylvania Steel Co. It calls for the enormous quantity of 43,937 tons of material.

The pressure upon the structural mills is exceedingly heavy and the payment of premiums for prompt delivery and the importing of occasional lots of foreign shapes seem to foreshadow an upward movement.

It has developed that in all, eight boats were ordered from Delaware shipyards. The shapes went to an Eastern Pennsylvania mill, while the plates were divided between Pittsburg and central and eastern Pennsylvania works.

During the week car builders have gathered in additional work. It is expected that the order for 12,000 steel cars for the Pennsylvania line west of Pittsburg will be put in hand either this week or early next week.

In nearly all the heavy lines the tonnage on the books is enormous and further work cannot be taken in many instances from sheer inability to meet even distant deliveries.

In the lighter lines the most important development is that a heavy buying movement has set in all along the wire trade. The tonnage in sheets, too, is picking up, but the merchant pipe trade is afflicted with sharp cutting of prices.

In bars the agricultural implement makers and other consumers who contracted for their requirements for six months and a year ahead have now pretty well covered. The aggregate tonnage has been very large.

LONDON METAL MARKETS.

From Metal Market Report, Aug. 16, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 47s. 1 1-2d., and Scotch warrants at 50s. 6d., making prices, as compared with last week, 3d. higher for Middleboro, and 1s. 2d. for Scotch warrants.

Tin—Spot tin opened firm at £149 10s. futures at £148 15s., and after sales of 80 tons of spot and 230 tons of futures, closed firm at £149 15s. for spot and £149 for futures, making price as compared with last week, £1 5s. higher on spot, and £2 higher on futures.

Copper—Spot copper opened firm at £69 10s., futures £69 10s., and after sales of 100 tons of spot and 700 tons of futures, closed easy at £69 5s. for spot, and £69 5s. for futures, making price as compared with last week, 5s. higher on spot and 7s. 6d. higher on futures.

Lead—The market closed at £13 18s. 9d., making price as compared with last week, 11s. 3d. higher.

Spelter—The market closed at £24 12s. 6d., making price as compared with last week, 5s. higher.

Nova Scotia Trade News

Halifax, N.S., Aug. 15.

THE hardware trade is very quiet in all lines, and dealers do not expect that business will show any improvement before the end of the month, if then. Not until the harvesting is over will trade brighten. Dealers, however, are not complaining over the dull spell. While business was slow at the opening of the season it showed a remarkable improvement later on, when orders came in very freely. The white lead market has attracted considerable attention here during the week, due to the rapid advance in the price of that article. This was expected, however, owing to the change in the tariff. The increase was 50c. all round. Lead pipe is also stronger, showing an advance of 20c., the price now quoted being $4.90. Barb wire is $2.55 in less than carload lots, and $2.45 for carload lots.

The Maritime Hardware Association has still under consideration the revision of the price list. The members here are waiting for a reply from St. John. The articles over which the hitch has occurred are glass, paints, and nails. Dealers here are anxious to have these articles listed in what they considered a more beneficial way to the trade in general. Under the existing arrangement they are obliged to charge the same for one single barrel of nails as they would for one hundred.

The Oxford Copper Co. have bonded their property to a company composed principally of Halifax capitalists. A representative from Halifax is going to inspect the property this week, and if it is considered satisfactory development work will be commenced at once.

The hardware stock of the wholesale firm of W. B. Arthur & Co., which is in financial difficulties, is offered for sale by tender. The firm's building is also to be sold by tender.

Prices quoted here follow :

Lead pipe	$ 4 90
Sheet zinc, in casks	7½c.
" " 5 sheets and over	7¾c.
Less	8c.
Pig lead, per lb	3½ to 4c.
Bar iron, base	$ 2 00
Wire nails, base	2 30

Decorative	6 75
B.B. No. 1	6 25
B.B. No. 2	6 50
Barbed Wire, less than carload lots.	2 55
" " carload lots	2 45
Horseshoes, for quantities	3 85
Galvanized iron, 20 tons, 30 gauge.	4 00
Black sheet iron	2 25
Pole axes, polished	7 00
" " black	7 50
Double bit axes, polished	12 00
" black	13 00
Lanterns, cold blast	5 00
Turpentine	94
Boiled oil	54
Raw oil	51

The Dominion Natural Gas Co. will extend their system to Galt, and are now negotiating with the Galt Gas Co. to use the latter's mains. The Galt Gas Co. will receive natural gas from the Dominion Gas Co. at a price which will allow a 35-cent per 1,000 cubic foot rate to Galt consumers.

PERSONAL AND TRADE NOTES

Toronto.

Mr. F. O. Lewis, of Lewis Bros. & Co., Montreal, spent Thursday at the Toronto branch of the company.

Mr. Walker Holborn, hardware merchant, Sutton, is spending his holidays with his family in Toronto.

Mr. Lou Robb, manager of Fred Hunt's plumbing business at London, was in Toronto and Montreal during the past week.

Mr. Thomas Elliott, who for some years conducted a retail hardware business in Perth, Ont., has accepted a position with H. S. Howland, Sons & Co.

Jas. Johnston, of the Dominion Wire Co., Montreal, is spending three weeks' holidays with Mr. Thomas Hodson, Toronto. Mr. Johnston is much improved in health.

Mr. John McLaren, traveling representative of the Canada Brass & Supply Co., London, passed through Toronto last Saturday on a business trip to Montreal.

Mr. John Bowman, London, former president of the Ontario Wholesale Hardware Association, was a caller at the Toronto office of Hardware and Metal last Saturday.

The Queen City Cutlery Co., 169 Spadina avenue, Toronto, have arranged with their creditors to close out their business and pay 100 cents on the dollar. Mr. I. A. Tobias, manager, will continue to represent the Clauss Shears Co., and is arranging to organize a joint stock company to carry on a wholesale business.

Mr. W. P. Millar, of the James Smart Mfg. Co., Limited, Brockville, was a caller on the Toronto office of Hardware and Metal last week. Mr. Millar reports that the "Kelsey" warm-air heater is steadily increasing in popularity and in conjunction with their blower system is winning great favor for heating and ventilating large hospital buildings, etc., as well as the smaller school and church structures.

Montreal.

Mr. White, hardware merchant, of Orillia, was in Montreal the early part of the week.

J. A. Bremner, of Alex. Bremner, importer of cement, firebrick, etc., Montreal, is confined to his bed through illness.

F. W. Wilkinson, of B. & H. Thompson, metal merchants, Montreal, is enjoying a three weeks' vacation at East Boulton.

Mr. Spragg, late of Emerson & Fisher, St. John, N.B., has joined the invoice department of Lewis Bros. & Co., Limited, Montreal.

The employes of the Dominion Cartridge Co., Montreal, are holding their ninth annual picnic at Brownsburg, Que., to-day, Aug. 19.

Fire gutted the premises of the Montreal Engine Works early Tuesday morning. The loss is placed at between $2,000 and $3,000.

Mr. Moser, of Caverhill, Learmont & Co.'s Winnipeg office, was a caller at the firm's headquarters, Montreal, on Saturday and Monday.

Mr. E. C. Eaton, director of Frothingham & Workman, Limited, Montreal, has so far recovered from his serious accident as to be at his office again this week.

J. P. Seybold, senior member of Seybold & Sons Co., wholesale hardware merchants, Montreal, returned last week from a three weeks' outing at Proud's Neck, Maine.

Mr. E. Dowsley, secretary of A. Ramsay & Sons, manufacturers of mixed paints, Montreal, has returned from a pleasant three weeks' vacation on the coast of Maine.

John James Brown & Son have let contracts for building a large dancing academy and private hotel for Prof. L. Norman, Montreal. D. M. Long is the contractor. Metallic ceilings are to be installed throughout by the Pedlar People.

Mr. W. P. Crary, president of the 20th Century Mfg. Co., New York, was in Montreal this week, and while there appointed Mr. Walter Grose Canadian sales manager for his firm. The Ontario Lantern & Lamp Co. have obtained the right from Mr. Crary to manufacture the 20th Century White Flame Burner in this country.

Mr. K. B. Thornton, superintendent of lines for the Montreal Light, Heat & Power Co., left this week to take a position in the operating department of J. G. White & Co., New York. Before leaving, Mr. Thornton was presented with a loving cup by the superintendent and officers of the company. Mr. W. McLea Walbank, vice-president, made the presentation.

Mr. M. P. Shea, who has traveled in Eastern Ontario and the Soo line for the past two years, representing the Canadian Fairbanks Co., Limited, has taken control of the advertising and publishing department for the company, and will be succeeded by Mr. E. J. Holland, who is well known in that territory. The company intend making other additions to their traveling staff in Quebec Province.

"Steeple Jack" Murphy has been in Montreal for some time executing contracts of repairing and re-painting galvanized iron work on the tall steeples of St. Antony's, Dominion Square Methodist, American Presbyterian and St. Gabriel's Churches. His method of work is unique inasmuch as he uses no scaffolding or ladders. Jack intends to visit Ontario in the near future, and if any of the trade would like to secure his services letters addressed care of the Pedlar People Montreal, will catch him.

Elsewhere.

The employes of the Vulcan Iron Works, Winnipeg, hold their annual excursion on Saturday, 19th inst.

Purvis Bros., hardware merchants and plumbers, Sudbury, have completed a large two-storey brick addition to their store on Larch street.

Mr. W. G. Seyffert will shortly open a store on Ainslie street, Galt, for the sale of sporting goods, light hardware and stoves and ranges.

Mr. H. E. T. Haultain, mining engineer, Toronto, has been appointed to take charge of the mining and milling for the Canadian Corundum Co. in Renfrew County.

Mr. M. R. Summerfeldt, hardware merchant, Mount Albert, is making an extensive trip to the Northwest and Pacific Coast and will be gone about two months.

Mr. Robert Piper, of Gillard's hardware store, Cobourg, was injured recently while taking down a can of pitch tar from a shelf. It exploded and flew into his face, burning it severely, especially about the eyes. It is thought that his sight is not permanently injured.

Robert Hobson, manager of the Hamilton Steel & Iron Co., who had planned to start for England shortly, was taken suddenly ill a few days ago, and his condition became so serious that it was decided to remove him to the city hospital, where doctors operated on him for appendictis. His many friends will hope for a speedy recovery.

Mr. H. Saprey, vice-president of the Montreal Copper Co., Limited, was in Hamilton last week. Mr. Saprey says the boycott on the United States products by the Chinese is not hurting Canada any. As an instance, his company shipped 100,000 tons of copper to the Celestial Empire recently, and is sending another big order to the same place next week.

Mr. W. H. Wiggs, the proprietor of the large plumbing supply house (Mechanics' Supply Co.) in Quebec City, has just returned from Europe, having gone with the Canadian Manufacturers' Association. He also visited France, Germany, Holland and Belgium, and while there saw the Liege Exhibition. Canada has the finest foreign building on the grounds and it is daily crowded with visitors.

John Lemmon, of the firm of Lemmon & Lawrenson, hardware dealers, Kingston, has purchased the interest held by the latter partner. The firm will hereafter be known as Lemmon & Sons, and will consist of Mr. Lemmon and his two sons, Allen and Melville. It was just exactly five years ago that Lemmon & Lawrenson went into business on King street. The business has grown from a $5,000 basis the first year to over $40,000 this year, and prospects are good for future development.

GAS FLASH LIGHT SIGNS.

A taking novelty is being introduced in Canada by the Rochester Lamp Co., 109 Church street, Toronto. It is a flashlight sign with an automatic gas burner, allowing the sign to show dark for a minute or a few seconds and then light for a longer or shorter period. All contrivances of a similar nature in the past have been electrical affairs. The device is of great value to merchants desiring to attract attention to special sales or seasonable merchandise and there is room for several in every town.

FARMERS ARE LEARNING.

Mr. W. A. Hillhouse, hardware merchant and plumber, Shelburne, writes that the trade in his section is very prosperous. He says: "Our farmers are beginning to instal heating and plumbing in the handsome new houses they are building, the same as their town cousins. Trade in all lines is good and a magnificent crop is about to be harvested."

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

BUSINESS CHANCES.

IF you wish to buy or sell a business anywhere in Western Canada, it will pay you to communicate with us. We have some good legitimate propositions on our list; handle nothing else. Address The Business Brokers, 611 McIntyre Block, Winnipeg, Man. (tf)

MANUFACTURERS' AGENT WANTED.

A LARGE firm of bedstead manufacturers in Birmingham, Eng., are open to engage an agent in Canada for the sale of their goods. Address Box 254, HARDWARE AND METAL, Toronto. (tf)

TRAVELERS WANTED.

A MIDDLE-AGED gentleman of good address is wanted to call on the trade in Ontario. No samples to carry. A very good opening for a retired or retiring general merchant who desires a light, healthy occupation with good remuneration if successful. Give references. Box 260 HARDWARE AND METAL, Toronto. (25tf)

SITUATIONS VACANT.

HARDWARE clerk, with knowledge of tinsmithing by September 1. Box 483, Essex, Ont. (34)

TINSMITHS wanted; 20 to 25c. per hour. Apply to Pedlar People, Oshawa, Ont. (34)

TINSMITH wanted; experienced; must be good on furnace work; steady employment; wages $12 per week. Box 269, HARDWARE AND METAL, Toronto. (34)

WANTED—Good hardware clerk; one who has the knowledge of cutting glass and stocking; keeping suitable for the country trade. Address Jas. Wright & Son, Glencoe, Ont. (35)

WANTED—At once, one first-class tinsmith; must be temperate; steady job to right man. Apply to S. B. Merrill, Enterprise, Ont. (34)

GRANITEWARE REPAIRS.

TINSMITHS, attention—Graniteware repaired by new process; durable and good. Send one dollar for recipe. O. S. Wright, Hardware and Tinware, Vienna, Ontario. (33)

TO LET.

WAREHOUSE in Galgary, newly built; wired for electric light and with railroad siding facilities; basement, 44' x 32'; ground floor, 44' x 32½'; first floor, 73' x 48'; with or without heat as tenant desires, also Elevator if required. Apply to Wm. Head, P.O. Box 104, Calgary, Alta. (33)

FOR SALE.

A FIRST-CLASS foundry in good running order, equipped with cranes and overhead trolley, machine shop and pattern house; works are situated on two acres of land at New Toronto, just outside city limits, with splendid shipping facilities; modern plant in every respect. Address Pease Foundry Co., Limited, 191 Queen street east, Toronto. (38)

AS AN ENGLISHMAN SEES US.

AN Englishman, now resident in Toronto, recently wrote the Ironmonger, of London, England, the interesting letter reproduced below. The writer, Mr. E. P. Oxenden, has been in Canada a year and is now manager of a hardware business in Toronto. He says:

"One of the first impressions I received on arriving was of the large scale on which the hardware trade is conducted here and the wideness of its scope for individual enterprise as compared with England. Here in Canada we have no equivalent of the Thames street houses to compete for the builders' trade. The builders, as a matter of course, go to the local hardware and plumbers' stores for all their supplies. Moreover, owing probably to the existence of so many manufacturers' syndicates and associations and to the high import tariff, the selling prices are high and well maintained, especialy in plumbers' goods. The population of our immediate market in Toronto is now about a quarter of a million and is rapidly growing, and we also supply a big district outside the town, so that there is an enormous demand and market for our goods.

The almost universal business terms in the retail trade here are net cash, and no discount is expected by the buyer, but the wholesale houses allow the retailer 2 per cent. for cash within thirty days. Many retailers, of course, give credit, usually on the hire-purchase system, which is rather popular. No stamp is needed to make a contract legal, so that this form of trading is simple and safe. Receipts also are free from stamp duty here.

Toronto is a large manufacturing town. In the hardware department it produces stoves, furnaces, tinned and japanned ware, enamelled ware, woodware, cutlery, tools of various kinds, and machinery. Moreover, throughout the Province of Ontario, works of all kinds are growing up. In imported cutlery Rodgers' brand is generally called for, but some of the German makes have a pretty fair reputation, and Canadian manufacturers are coming to the front in table cutlery. In axes there is a very large demand for the famous American patterns, American saws, planes, and levels are also mostly used, but in chisels, English-made goods hold the market. The prices for tools generally rule low, but good cutlery, owing to the carriage and duty, is high in price. All sheet iron and tinned goods are remarkably light in quality and of cheap grade. A really strong coal-hod, pail, or dustpan, for instance, cannot be found here. The Canadians are also very weak in brass foundry, and the patterns of this stock in the ordinary hardware store, are few and flimsy, iron goods, japanned or bronzed, being often substituted for brass. The practice of only keeping a very small variety of patterns and sizes makes stockkeeping easy, and fresh supplies can usually be obtained within twenty-four hours, the order being sent by the telephone (telephones, by the way, are almost universal). Travelers call weekly, and many goods are ordered six months in advance. There is a large sale for American pattern locks, which are wonderfully cheap. Brass door furniture is unknown, china or mineral furniture of American pattern being almost universal. All hardware retailers sell window glass, for which there is a very large demand, as also for ready-mixed paints, turpentine, oils and varnishes. Gardening tools (mostly of American pattern) are cheap, but the variety is very limited. In spades, shovels, and digging forks, for instance, only one size is usually kept in stock. Side-driven lawn mowers, the only pattern used here, are in large demand, and very cheap, retailing at from $3 to $5 for 14-inch to 18-inch cutters. Such domestic goods as mangles and laundry stoves are rarely seen, as the Chinamen do practically all the laundry work. Their laundries are to be found in every street, but the Government does not encourage the increase of this type of "washerwoman," for Chinese women are altogether prohibited from entering Canada and the men may only come in on payment of a heavy poll-tax.

Painters' brushes in good quality and well assorted are found in all hardware stores, but domestic brushes are poor in quality and assortment, because the almost universal corn broom and the American mop are made to serve all purposes, and floors are very largely painted, stained and varnished, or oiled and polished. Hence the large demand for paints, oils, and varnishes. A great deal of the splendid turnover in the hardwareman's business here as compared with England is due to the greater extreme of cold and heat, every change of season producing its fresh demand for hardware goods. Thus, every autumn brings with it a call for stoves, furnaces, and their fittings from every house, as well as for storm doors and windows, together with the demand for the necessary outfit for this; while the severe frosts of Winter regularly cause bursts in the water pipes, taps, and hydrants, and Spring means the removal of all stoves and their pipes. Spring cleaning, moreover, brings with it a call for screen doors and windows to keep out the flies and mosquitoes, and after a year's residence I have come to the conclusion that there is no better country than Canada for the hardwareman who knows his trade, especially if he is able to combine plumbing and tinsmithing with his ironmongery business."

BUSINESS CHANGES

Ontario.

John Simpson, blacksmith, Carleton Place, is dead.

J. D. Mills, hardware merchant, Prescott, has assigned to G. W. Wallace. A meeting of creditors will be held Aug. 19.

The Guelph Foundry Co., Limited, Guelph, are in voluntary liquidation. The assets have been advertised for sale by tender.

Quebec.

Berthiaume & Pepin have been registered as plumbers, Montreal.

J. R. Durand, tinsmith, Berthiersville, is offering to compromise.

J. O. Gervais, hardware merchant, Montreal, is offering to compromise.

Vaillancourt & Lafrancois, plumbers, Montreal, have dissolved partnership.

The assignment of J. H. Lacroix, hardware merchant, Shawinigan Falls, has been demanded.

J. I. O. Guindon, hardware merchant, Montreal is offering to compromise. The assets were sold Aug. 18.

Gravel & Duhamel, wholesale saddlery and hardware merchants, Montreal, have purchased the bankrupt stock of O. L. Richardson & Sons, wholesale asddlery, Quebec.

Manitoba and N.W.T.

J. Harrison, blacksmith, Wapella, has been succeeded by J. Hazelwood.

GODERICH HARDWAREMAN IN WEST.

MR. MELVIN HOWELL, a prominent hardware merchant of Goderich, Ontario, was in Winnipeg early in the week and called at the Winnipeg office of Hardware and Metal. Mr. Howell is taking an extended trip through the west, and on Tuesday night he left for the Coast. He intends visiting the Portland Fair and returning home by way of Chicago. Mr. Howell has been brought up in the hardware trade, being for years in the employ of R. W. McKenzie, the veteran hardwareman of the pretty town of Goderich. Later he was admitted to partnership, the firm becoming McKenzie & Howell. About two years ago Mr. McKenzie retired from the business and Mr. Howell took over one of the most progressive hardware stores in Western Ontario.

NOW "MADE IN CANADA."

The 20th Century Mfg. Co. of New York have granted to the Ontario Lantern & Lamp Co., Montreal, the right to manufacture their white flame burner in Canada. This article is already in brisk demand, and buyers in the Dominion will be glad to know that they can henceforth secure it in their own country without paying duty. The Canadian sales will be under the management of Mr. Walter Grose, who is so well known to the trade through his connection with the Ontario Lantern & Lamp Co. All communications from Canadian dealers in reference to the 20th Century White Flame Burner should hereafter be addressed to Walter Grose, 28-30 St. Dizier street, Montreal.

Pressed Zinc Ornaments often make the beginning of a profitable trade in "Metallic" Building materials. Their beauty suggests many other metal things.

Dealers catering to the Sheet Metal Trade find the quality, workmanship and variety of the "Metallic" line more satisfactory than any other.

Being of solid zinc or copper they last forever and their outlines are clearer cut and sharper than any similar die stuck work.

The use of "Metallic" Pressed metal goods in the form of Friezes, Festoons, Centres and other Ornaments for interior and exterior decoration are innumerable. New designs are added constantly.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg 314

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (stone brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug. 18, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

IN another part of this paper will be found an extended account of the National Plumbers' Association convention, which was the big event in Winnipeg trade circles last week. The holding of the convention in Winnipeg this year has already given the association work in the west a new impetus and it is probable that the Province of Manitoba will have a Provincial association very soon. Hardware and Metal was the only Canadian paper having a representative at the sessions of the convention.

* * *

Geo. Clare, M.P., for South Waterloo and head of the firm of Clare Bros., of Preston, Ont., was in Winnipeg last week visiting Clare & Brockest, the western selling agents for the firm. Mr. Clare will visit the coast and probably the Portland fair before his return east.

* * *

On Saturday the office staff of the J. H. Ashdown Hardware Co. held their annual picnic at Winnipeg Beach. The excursion was very successful, the only regret being occasioned by the absence of Mr. Ashdown.

* * *

Prices are steady this week, the single exception being a decline in zinc. Many travelers are enjoying their holidays and consequently wholesale business is not so brisk as it has been.

* * *

Screen Wire Cloth—Price is still quoted at $1.55 per 100 square feet. The season's trade is almost over.

Poultry Netting—Prices are as follows for the 2-inch mesh in No. 19 gauge:

24-inch	roll,	perroll	$1 20
30	"	"	1 50
36	"	"	1 80
48	"	"	2 40
60	"	"	3 00
72	"	"	3 60

Lanterns—Selling in large quantities for Fall trade. Prices, as recently announced by the wholesalers, are as follows:

Cold blast lanterns	$4 75	per doz.
Coppered cold blast lanterns	6 75	"
Cold blast dash "	7 25	"
Lift Lanterns	4 25	"

Wire—Trade in all kinds of staple wire and fencing, is fairly active, orders being for Fall delivery. Prices are still quoted as follows:

Barbed wire, 100 lb	$2 85
Plain galvanized 6 to 8	3 39
" 9 2 50	2 90
Plain galvanized 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	2 85
Staples	3 35
Oiled annealed wire 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Stephens'

Paint and Varnish Solvent

For removing paint or varnish from any desired surface.

It acts quickly and will not stain or raise the grain, leaving the wood in its original condition ready to be repainted or finished.

Absolutely reliable and a ready seller.

Write for information in detail and lowest prices.

G. F. STEPHENS & CO. LIMITED

WINNIPEG, CANADA

Horsenails—Discounts are as follows: "C" brand 40. 10 and 7 1-2 per cent., "M" brand and other brands 55 and 60 per cent. Add 15c. per box.

Wire Nails—Business is very active. The price is steady since the recent reduction to $2.75 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—In brisk demand at following unchanged discounts from list prices:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.25
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 00
" double bitts	12 00 to 18 00

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—There have been no changes since the reduction in Anchor tarred paper, recorded last week. Prices are as follows:

Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Ammunition, Etc.—Trade is now very brisk for September delivery. We quote:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge	
black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—For small quantities the price is 20 cents per lb. Concessions are obtainable for large quantities.

Iron and Steel—The market is only fairly active. Prices are steady. We quote:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—Quoted as follows:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge,	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

WINNIPEG HEATING CONTRACT.

D. W. Dwight. of Toronto, manager of the G.N.W. Telegraph Co., has presented to his daughter, Mrs. D. Ross, of Winnipeg, a Pease Economy heating and ventilating system. Waterloo vapor registers will be used throughout the system, and all materials are being furnished by the Pease-Waldon Co., Limited, of Winnipeg.

A new water service has been established at Grimsby.

Sarnia is extending its waterworks system. Two new high-pressure boilers are being installed.

A. Rodgers & Co., plumbers, Hamilton, have secured the contract for the alterations to the plumbing, etc., in the court house, the price to be $1,018. This includes the mason work, carpentering, painting, plumbing, plastering and tiling.

HEATING AND PLUMBING

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

By M. J. Quinn, Mechanical Superintendent for the Ontario Government.
[Registered in accordance with the Copyright Act]

ARTICLE XII.

AN EXAMPLE OF MODERN STEAM HEATING AND VENTILATION FOR PUBLIC BUILDINGS.

WHAT is, perhaps, the most modern system of steam heating and ventilation in Ontario has recently been completed in the new Science Building, Toronto, and it is the purpose of the writer to describe, so far as that is possible in a short series of articles, its method of operation, and by a few sketches, the general scheme carried out in its installation.

Of course it is to be understood that the drawings used are not scaled, so far as the building is concerned, and are not intended to give a correct idea of its interior, but rather to give the reader an opportunity of studying a scheme of heating and ventilation which it is expected will at once prove economical as regards the consumption of fuel, and effective as regards its ability to properly heat the building and provide the required number of changes of air.

In this respect, attention is drawn to the fact that the amount of air required in the various rooms in the building varies, not altogether because of the varying number of inmates—which is usually the only consideration in considering schemes of this kind,—but because of presence in greater or smaller quantities of noxious gases and pungent odors in many of the apartments, due to the work of experiment and research which is almost constantly going on in such an institution.

We will take up first for consideration the question of ventilation, a question which all will agree is one of the first importance, and which, perhaps, is today receiving more attention and careful thought on the part of heating and sanitary experts than any other with which they are called upon to deal. And because of the increasing recognition which it is receiving on the part of health authorities, who are meeting with a large measure of success in their efforts to gradually educate the public along proper lines, it becomes a matter of prime importance to every member of the heating and plumbing fraternity, be he master or journeyman, to make good use of every opportunity which presents itself to study the work of the best engineers in this line, so that they may be in a position to adopt, in a larger or smaller scale, the ideas therein contained.

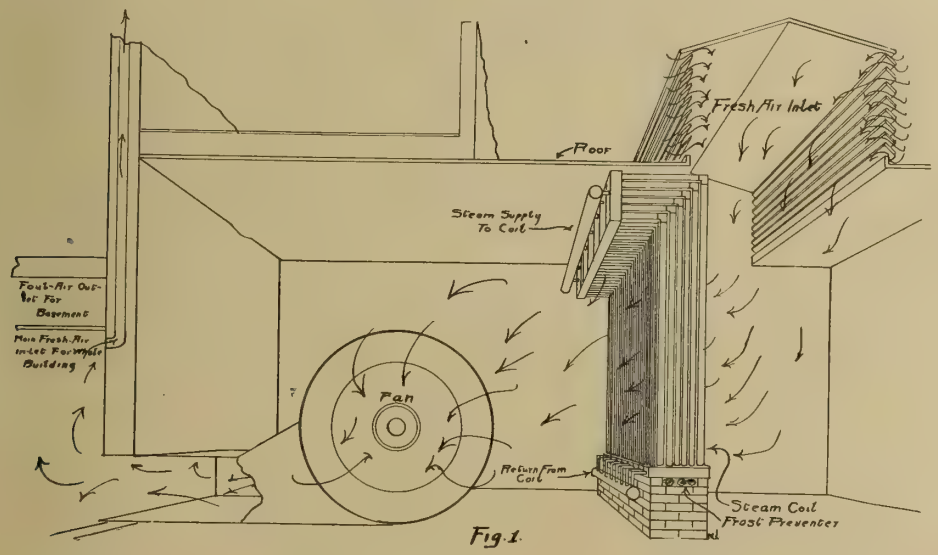

Fig. 1.

In designing a system of ventilation for a building, whether it be of a large public character, such as a church or school, office building or factory, or a private residence, two systems are available, viz., the gravity or ordinary indirect system which depends for its operation upon the difference in weight between the inside and outside atmosphere and which, because of the great fluctuation between these two bodies, cannot be relied upon to deliver a definite quantity of air in a specified time; and the mechanical system, which, through the medium of a fan, either steam or electrically driven, can, when of the correct size and driven at the proper velocity (accurate conclusions regarding both of which points are easily arrived at), deliver a constant supply of air of any desired volume without regard to atmospheric conditions.

It will, of course, go without saying that the latter system is the one adopted by the engineer who designed that in use in the Science Building, and a study of the cuts shown, together with the following explanation of the system, will, we hope, convey a clear idea of its essential features.

Referring to Fig. 1, it will be seen that within a large chamber, which is built immediately adjacent to the boiler room, is placed a large steam coil or "main heater," extending from a foundation of brick to a point close to the ceiling.

The coil is made in sections, each having fourteen one-inch pipes built in two rows of seven pipes each, and connected together top and bottom with cluster heaters, the tappings of which are made in straight rows, instead of "staggered"—the usual method,—and each section is separately valved and tapped, though these details are not shown.

Under the bottom headers is run a continuous three-pipe steam coil, without valve, but returned through a trap, so that it is kept constantly hot, to prevent the action of frost on the lower portion of the main heater, where condensation is liable to congeal when the outside temperature is at a very low point.

In front of the main heater is placed a double inlet supply fan, of the "full housed" cone construction. This fan is 14 ft. high, 6 ft. wide, with 7 ft. inlets, is belt connected to a 35-horse-power engine, and is run at a maximum velocity of one hundred and fifty revoluzions per minute.

When in operation the air is moved in the direction indicated by the arrows, a partial vacuum being created by the withdrawal of the air in that portion of the chamber in which the fan is situated, the fresh air from outside rushes in through the towers above the roof and is drawn through the steam coil, where it is heated to the desired temperature, passed through the fan as indicated, and discharged under pressure into the "main fresh-air inlet for the whole building," which is in reality a corridor under the basement floor, about 12 ft. wide and 7 ft. high, running the whole length of the building, and into which open the flues connecting with the various apartments.

Referring now to Fig. 2, it will be seen that flues are built in the walls on each side of the corridors, through which the air is delivered under pressure to the rooms on the different floors. A separate flue is provided for every room, and enters the same at a point between seven and eight feet above the floor.

On the face of every fresh air register is placed a galvanized sheet iron construction, an example of which is shown in Fig. 3, the object of which is to properly diffuse or distribute the incoming

currents of air so that a comparatively even distribution of the same is assured.

The angles at which the various deflectors are set depends, of course, upon the position of the register in its relation to the centre of the room, and the proportions of deflector are worked out with a view to fulfilling the requirements of the room for which it is intended.

With regard to the removal of the foul air, Fig. 2 shows a passage under the basement corridor floor, and above the fresh-air duct, which, like the latter, runs the full length of the building. Into this passage open flues which connect with the apartments in the basement only, and at the end of this "foul-air outlet from basement" is placed an exhaust fan, similar in construction to the main supply fan, though much smaller, being 7 ft. in diameter, 4 ft. wide, with a single inlet 5 ft. in diameter, an outlet 4 ft. square, belt connected, motor driven at a maximum velocity of 165 revolutions per minute.

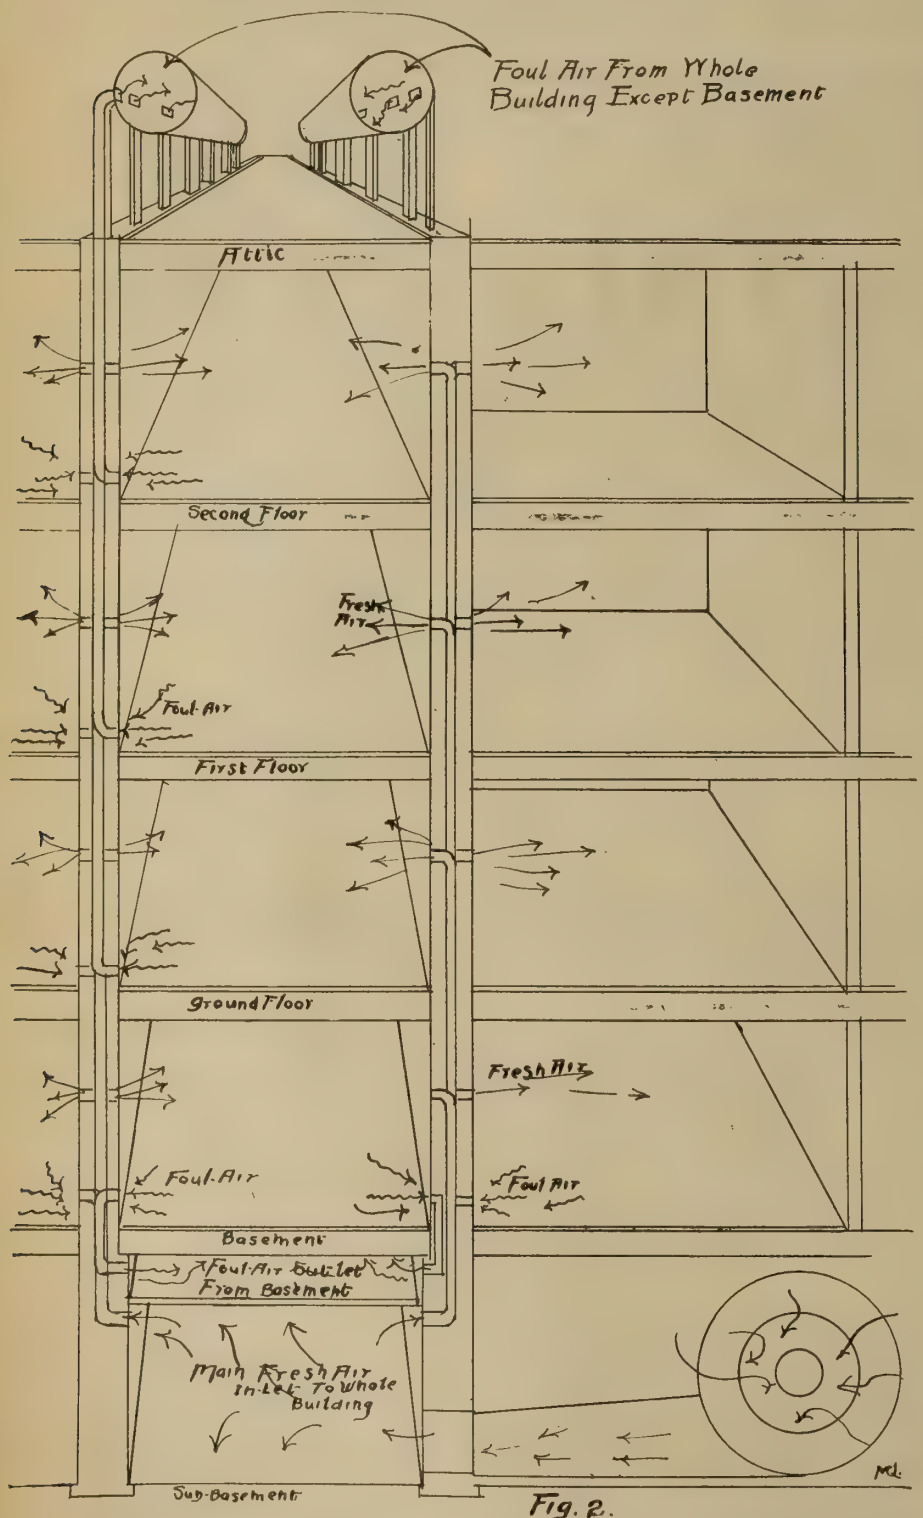

Fig. 2.

The foul air is in every instance taken from the apartment at a point close to the floor.

The removal of the foul air from the three upper floors of the building is accomplished by means of flues in the walls, more distinctly shown on the left side of Fig. 2, and of construction similar to those used for fresh-air inlets.

All foul-air flues extend to top of wall in attic, where they are connected to "main foul-air ducts by means of rectangular galvanized iron pipes of the proper dimensions.

The "main foul-air ducts" terminate in two chambers, one of which is shown in Fig. 4, in each of which is placed a fan, one 7 ft., the other 8 ft. in diameter, full housed, double inlet with outlets 48 in. by 136 in. and 49 in. by 155 in., respectively, each with a maximum velocity of 165 revolutions per minute.

These fans exhaust the air from the "main foul-air ducts" and deliver it into a large foul-air duct placed under the apex of the roof and running the full length of same.

This arrangement is more clearly shown in Fig. 5, which is a cross section of the fan chamber.

From this "main foul-air duct" the air is forced through an opening about 4 inches wide, which also runs the full length of the roof, and which is surmounted with a heavy galvanized iron hood set at a height sufficient to allow of the free exit of the total volume of air discharged by both fans, this arrangement obviating the necessity of constructing anything in the shape of a ventilating tower.

All fresh and foul-air ducts are fitted with a close-fitting damper, which is pneumatically actuated by a thermostatic device situated in the apartments to which they are connected, so that any desired constant volume of air may be delivered to any portion of the building.

This system of ventilation is undoubtedly as nearly perfect as it is possible to make it, careful regard having been had to all losses by friction and otherwise, the amount of air which can be supplied to each portion of the building is definitely known, and it being entirely separate, and in no way dependent upon the direct heating system, which will later be described, can be run, if so desired, only when required for ventilation, thereby effecting a very large saving in fuel which would be required if all the necessary heating and ventilation were attempted with one plant.

POSSIBILITIES IN HOT AIR HEATING.

Addresses delivered by R. S. Thompson at a semi-annual meeting of the American Society of Heating and Ventilating Engineers, Chicago, July, 1905.

JUDGEMENT is liable to be influenced by interest, and it is natural to suppose when a person advocates any particular system of heating that he has a special financial interest in that system. That the arguments I present may not be thus discounted I will state that the concern with which I am connected is just as well pleased to get a contract for heating with hot water or steam as with hot air, and my opinions are therefore unbiased by interest.

The primary object in all house-heating apparatus is to fill the house with warm air, and in all systems the air is warmed by contact with heated surfaces, as air is absolutely transparent to radiant heat. In heating with hot air the air is heated by contact with hot surfaces in a central heating apparatus and is then conveyed to the rooms. In heating with hot water or steam the water is heated

in the heating apparatus, conveyed to the rooms and there used to heat the iron of the radiators, which in turn heats the air.

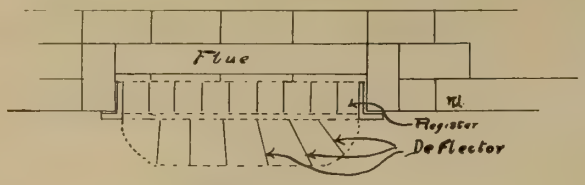

Fig 3

The difference between the two systems is, therefore, practically that in the hot air system the air is heated by one

But economy of operation is no less important. The plant is paid for once, the fuel bill is a continuing expense and

A given amount of fuel will in perfect combustion set free a given amount of heat, no more and no less. The heat is in the fuel, not in furnace or boilers. No heating apparatus can add a single unit. The theoretically perfect plant would be one in which there was absolutely perfect combustion of the fuel and complete utilization of the heat released by this combustion, and on these two points depends the comparative economy of operation.

On the first point, completeness of combustion, while there is large difference in different apparatus there is no essential difference between the two systems. The fuel can be burned as perfectly and as large a proportion of the heat units contained in it be released

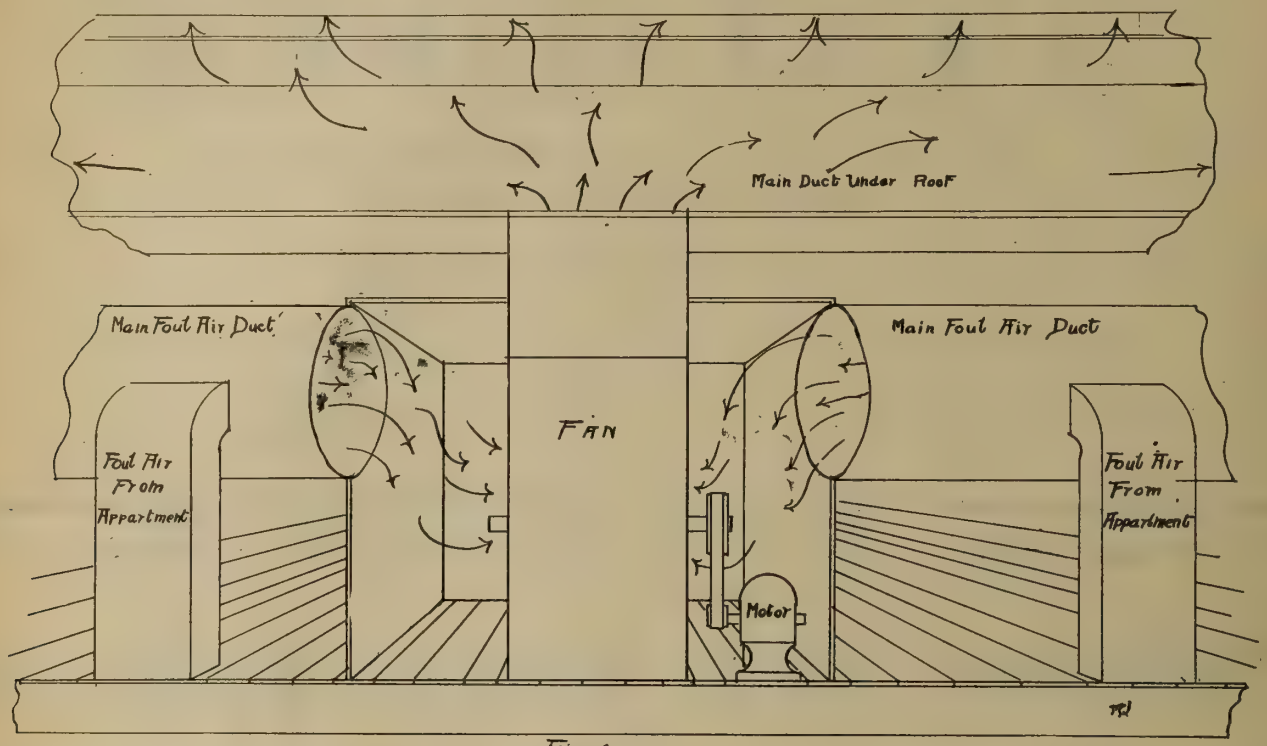

Fig. 4

central plant, while with hot water and steam the air is heated by a separate plant or substation in each room, which substation is heated from a central station.

It is not my purpose to disparage the system of heating the air by individual heating plants, but to show some of the possibilities in heating the air by a central plant, a system which, in my judgment, has been largely left to incompetent men and has not received the attention and scientific study which it deserves. That this system has been in a large proportion of cases unsatisfactory I freely admit, but believe that the failures have been due to errors in construction or operation and not to any inherent defect in the principle.

First Cost of Hot Air Heating.

Heating the air by a central plant involves less expense in the installation, and this is a matter which demands the consideration of the practical engineer. Economy in first cost is not everything, but it is something, and with probably 99 out of 100 people who have homes to heat a very vital something. While a really first-class hot air plant cannot be installed at the prices commonly charged for inferior and inefficient ones, yet even

frequently amounts to more in a few years than the first cost of the plant. No system is economical which involves a continuous useless expense. What are

with one system as with the other. The issue is therefore narrowed to what becomes of the heat after it is released from the fuel.

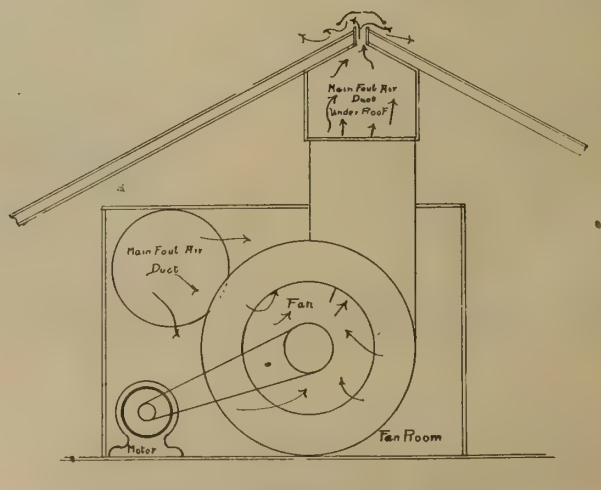

Fig 5

the specific facts in regard to cost of operation in heating with hot air?

Heat cannot be destroyed. Once produced, it must either be transformed in-

SOMETHING NEW IN RADIATORS

THE "SOVEREIGN"

1905

WATER or STEAM

There are Radiators on the market just as high as ours in the matter of inches; and you may be able to buy them for less "per inch" than you can get the ***"Sovereign"*** for.

However, don't forget that in the ***"Sovereign"*** the surfaces are larger—the connections freer and constructed to allow less friction—besides they are lighter in weight and the designs are more artistic and have generally better defined outlines—they are made and designed by the most experienced men in the manufacture of this class of goods in Canada, men who created all the best ideas in Radiation on the market to-day.

We are ready to ship all orders promptly.

TAYLOR-FORBES COMPANY, Guelph, Canada

to some other form of energy or continue as heat. In house heating it may be practically said that all the heat released by combustion either goes toward heating the house—that is, to replacing that which has been lost by radiation and leakage through walls and windows—or escapes up the chimney, having performed no more useful function than the creation of a draft.

The extent to which the heat produced is utilized can therefore be practically determined by ascertaining the per cent. which escapes to the chimney. The lower the temperature at which the waste products of combustion escape to the chimney (velocity of current being the same) the larger will be the per cent. utilized for heating the house and consequently the greater the economy of operation. In other words, the extent to which the cooling of the products of combustion can be carried is the measure of the efficiency of any heating apparatus.

Efficiency of Hot Air Heating.

Let us see the theoretical limit to which the cooling can be carried, keeping in mind the fact that the theoretical limit can never be reached, much less passed, in practice.

The products of combustion are cooled by contact with metal which is cooled by contact with water or air. The theoretical limit of cooling is therefore the temperature of the air or water by which this cooling is accomplished.

With live steam the possible minimum is the temperature of water boiling under normal atmospheric pressure, or 212 degrees.

With hot water the possible minimum is the temperature of the water as it returns to the boiler from the radiators, usually 140 to 170 degrees.

With hot air the possible minimum is the temperature of the cold air entering the furnace, anywhere from below zero to 70 degrees.

The theoretical limit of cooling and consequent theoretical economy in operation is therefore lower with hot water than with steam, and lower with hot air than with either hot water or steam. It is therefore possible, throretically, to heat with hot air more economically than with any other system.

But the advocates of the other systems will contend that while this may be so in theory, yet in practice, owing to the greater power of water to absorb heat, it is otherwise, and that actually the exhaustion of the heat contained in the products of combustion is carried much further in both steam and hot water heating than it is in hot air heating.

In many cases I admit the contention, but in turn contend that the reason is to be found in the construction of the apparatus and not in the principle and that it is entirely possible to so construct hot air apparatus that the same difference in its favor, as compared with hot water and steam, will exist in practice as is shown in theory.

A few days since I made a test with a hot air furnace and found the temperature in the smoke pipe was 120 degrees, or at least 20 degrees lower than the theoretical minimum with hot water and 92 degrees lower than the theoretical minimum with steam. Probably you will say that the fire was low. Judge for yourselves. At the time I took the temperature of the smoke pipe the furnace was delivering over 1,000 cubic feet of air a minute at a temperature of 210 degrees. And when this test was made the temperature of the outside air was 80 degrees, or at least 40 degrees higher than would be usual in the use of the apparatus. It may safely be said, therefore, that in actual practice the cooling of the products of combustion in a hot air furnace can be actually carried from 40 to 120 degrees lower than the theoretical minimum with hot water and steam. I think it therefore demonstrated, both by scientific deduction and practical test, that one of the possibilities in heating with hot air is the utilization of a larger per cent. of the heat contained in the fuel than can be secured by any other system.

In heating with hot air, however, there is an expenditure of heat which may perhaps be called waste—namely, the heat contained in the air which is forced out of the building by the pressure of the warm air that is being poured in. But this loss of heat is due to the necessity for ventilation. A given amount of ventilation will involve the same loss of British thermal units whatever the heating system may be. It is true that with hot water or steam heat it is possible to reduce the ventilation below the proper ratio and thus save heat. But this is equally possible with hot air if the plant is so constructed that the amount of ventilation can be controlled.

It is true that with hot air heating ventilation can be carried to a point which will involve large loss, as I shall show hereafter. The same is true with hot water and steam. You can open the windows and crowd the fire. But in either case the loss is to be charged up to ventilation or bad management and not to the system of heating, and can be as well controlled under one system as another.

It is a possibility in heating with hot air to heat all the rooms in a house at the same time. I am compelled to admit that this is not always done in practice. I could not even dispute the statement that it is not often done, but I can demonstrate both theoretically and practically that it can be done, and that which can be done is a possibility. The difficulty has not been in the principle, but in the apparatus; not in the gun, but in the man behind the gun.

If the amount of cold air that is supplied to the furnace is equal to the amount that can be forced through all the hot air pipes; if the construction of the furnace is such that this amount of air can pass through the casing and reach the hot air pipes, with velocity unreduced by friction; if the furnace has the necessary surface and the necessary arrangement of surface to heat all this air; if the size and form of the hot air pipes is such as will permit the passage of the required amount of air to each room, and if there is no serious back pressure in any room, the furnace will heat them all at the same time; for if enough air is being passed through the furnace to supply all that can be carried by all the pipes the pressure in the furnace will force this air through all these pipes if the resistance due to friction and back pressure in the rooms is less than the pressure in the furnace. That is a simple matter of mathematical demonstration.

There are a great many "ifs" in that claim. Certainly. And it is the business of the heating engineer to look after those "ifs." If he can't do it he has not yet mastered his profession. These "ifs" cannot be met either by guesswork or by a set of hard and fast rules. They require a thorough scientific knowledge of the principles involved, a considerable amount of practical experience and a liberal use of horse sense.

Air is compressible and elastic. It is subject to friction, inertia and momentum. The fact that two pipes have the same area is not proof that the same pressure will force the same amount of air through each. To get proportions correct is not a simple or easy matter, but requires the exercise of brains and judgment.

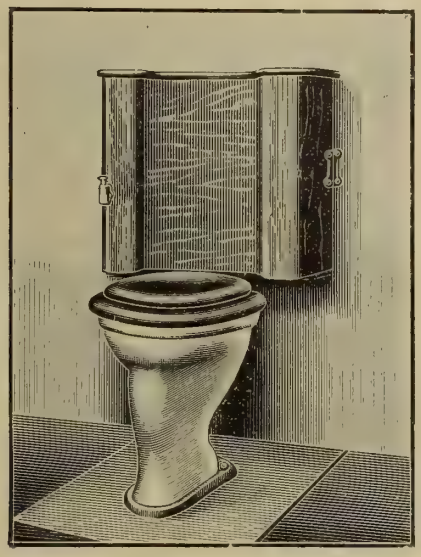
Hot Air Heating for Exposed Situations.

It is possible in heating with hot air to heat those rooms which are most exposed to the wind, or the windward side of large rooms. The course of heated air is subject to definite laws and by the use of these laws it can be controlled. But the man who would control it must make himself familiar with these laws and not content himself with a lot of empirical formulas.

The cause of trouble in heating rooms exposed to the wind is that the air pressure on the outside by leakage produces air pressure in the room, and if the pressure in the room is greater than the pressure in the pipe the greater will overcome the less. If the pressure of air on the outside is so great that the pressure of air in the pipe cannot force air out through the crevices around windows, and there is no outlet for the air, it will be impossible to force air into the room and consequently impossible to force air into the room and consequently impossible to heat that room. But the difficulty can be overcome by providing a proper outlet of the proper size and in the proper location.

Nothing has done so much to injure heating with hot air as the common idea that neither skill nor scientific knowledge is needed in connection with it. This system has been neglected by scientific men and the work is frequently turned over to common mechanics. In many places the carpenter is given the job of having the house piped and he turns it over to whoever gets the contract for roofing and spouting. The average man, who would not think of laying out a shoe closet in the house he is building without consulting an architect, will give all the directions for putting in a furnace, determine its size, its location, the pipes and registers. Then he expects the furnaceman to put in the furnace on plans of the builders' selection and guarantee the working of the plant.

And, strangest of all, there are plenty of furnacemen who will do it. No wonder guarantees on the working of hot air furnaces are worth but little.



Recirculation to Cure Over-Ventilation.

There is one point in connection with heating with hot air, to which I have already referred, in which there is a possibility of great waste of heat. This is overventilation. Take a house in which the loss by radiation from walls is 80,000 British thermal units per hour in zero weather. To maintain the temperature by replacing this loss will require the use of 62,857 cubic feet of air per hour at a temperature of 140 degrees.

Supposing the family consists of six

CANADA BRASS & SUPPLY CO.

We are the largest manufacturers of Plumbing Supplies in CANADA, and the only Supply House in the country making their own woodwork. This is one reason of the large demand for our "London" Lowdown Combination, which is the most satisfactory and best-working outfit in the market.

Our stock is always complete and we can give you prompt shipment of anything you may want in Plumbing Supplies.

We solicit your orders.

persons, the maximum requirement for ventilation would be 11,800 cubic feet per hour. In this case we are using 51,057 cubic feet of air per hour in excess of the amount required for ventilation. If this air escapes at 70 degrees and has been heated from zero it represents a loss of 64,963 British thermal units, or about 8 pounds of coal per hour. In my judgment the remedy for this is to make provision for recirculating this excess of air.

AMONGST CANADIAN PLUMBERS.

ENTERPRISING AMHERST PLUMBERS.

AN original picture is reproduced herewith showing Mr. W. A. Loughrey, of Amherst, N.S., hard at work setting up one of the Amherst Foundry Co.'s Beaver brand lavatories.

W. A. Laughrey, Amherst, N.S.
Specially posed for reproduction in HARDWARE & METAL

It will be news to many in the west to know that the Amherst concern is now manufacturing some beautiful lines of baths, sinks and lavatories. The company are developing a large business in the Maritime Provinces, however, and Amherst is proud to have the second purely Canadian enamelled-ware factory.

W. A. Loughrey, who had the accompanying photograph taken especially for Hardware and Metal, has been in the plumbing business in Amherst for nine years and has now formed a company, the business being conducted hereafter under the name of W. A. Loughrey & Co., doing general plumbing and hot water fitting. Mr. Loughrey's enterprise is shown by his letter head, on which a small oval picture of the gentleman appears, together with the words: "In the long run it pays to do good work. That is why I secure contracts all over the Maritime Provinces."

GROWING BUSINESS AT GALT.

THE above is a snapshot of the interior of Allan & McKenzie's hardware store at Galt, Ont. It shows the every-day appearance of this well-known house, consisting of a basement, showroom, workshop, stockroom and garret, with a back shop and storeroom overhead. The showroom is nicely arranged for the display of hardware, stoves, tin and graniteware, paints oils, varnishes, etc., and general house-furnishings.

This house has always been noted for the high class of goods carried in stock. The patronage bestowed on it is very extensive both at home and distant parts of the province. Table and pocket cutlery is one of the specialties and their reputation for up-to-date goods is well established, a common saying being that if there is anything new and good you can get it at Allan & McKenzie's. The stock carried is very large and extensive and increasing every year.

The workshop on the second flat is large, airy and light, and is fitted with a complete set of tools and machinery for tinsmithing, furnace work and general repair work. An iron brake eight feet long is used for eavetroughing, etc. The stockroom, garret and back stockroom takes care of the surplus stock. They have also a large storeroom on Ainslie street, where the surplus stock of new stoves are kept and second-hand stoves are repaired and sold. One feature of this business is that everything is marked in plain figures, this ensuring one price for all.

PLUMBERS' SHOW ROOMS AND SHOPS.

IN my travels through the country I am constantly running up against new ideas in the matter of displaying plumbing goods, writes a traveler in the Metal Worker. Some plumbers are content with little or no display, relying upon their ability to talk or on the value of the work executed by them in the community in which they live. Others, however, take special interest in preparing an attractive showroom, displaying new features and keeping their establishment up to date in all particulars. One way to bring to the public notice new fixtures and to demonstrate the application of old ones is to set closets, basins, tubs, etc., both under water pressure and with sewer connections. This allows the prospective purchaser to see the working of all fixtures in a much better way than if water pressure and sewer connection were not at hand. It is also a good idea to rough in the entire plumbing for a bathroom, leaving the floor open so that the soil pipe may be inspected, showing how the lead bends are connected up, and in all respects to bring to the view of prospective customers the actual working and uses of various fixtures, traps, back vents, air chambers, etc. This affords the plumber an opportunity to explain at some length the superiority of his work over that of others, to show why back vents are used, and in a general way to bring out the mechanical features of a plan.

A wrinkle which is sure to bring trade is to inclose a small room about the size of an ordinary bathroom, have it nicely papered with a varnish paper and set up the fixtures in the way they would be used in the room. This affords an opportunity to display to advantage various nickel-plated fixtures, such as towel racks, clothes hooks, soap boxes, etc., used in bathrooms and which are a profitable line for the plumber to carry. This method of displaying fixtures has the advantage of showing off the goods in their true size; goods on the floor being apt to be dwarfed by the large dimensions of the room and the size of other goods near them. If space is available and business warrants, two or three bathrooms should be fitted up with different priced fixtures to explain quickly and forcibly to customers how certain priced goods will look when installed in their homes.

Another feature which has been found to be of advantage is to have neat photographs of important pieces of work either in a book in the office or framed to hang on the walls, showing customers different arrangements, expensive fixtures and general conditions in op-to-date houses regarding plumbing fixtures. A plumber in a small Pennsylvania town has one of the neatest showrooms I ever witnessed, and the expense connected with fitting it up was not more than is ordinarily incurred by plumbers. The first space of 15 feet was devoted to the display of tubs and other fixtures, which were arranged tastefully so that people could walk around all sides of them and view the fittings. On the walls, which

were free from shelves, were arranged either photographs of the buildings or architects' wash drawings where this firm had installed the plumbing work. The rear of the room instead of having the usual rough counter with showcase on top, found in so many stores, had neat glass show counters about 12 feet in length, of the same kind as those ordinarily used by cigar dealers and which cost very little more than the ordinary wooden counter with glass showcase on top. In these were placed nickel-plated fittings of all kinds, which not only displayed themselves to the best advantage but were kept free from dust. Back of these counters were desks for the proprietors and the bookkeeper, and still further back in the room was a door leading into the shop. The shop, however, had an entrance to the street through another part of the building so that workmen never came through the showroom. This is very desirable, as I have often seen careless workmen run up against a prospective customer with a piece of soil pipe.

PORT ARTHUR'S PLUMBING GROWTH.

FOR many years the Marks, Clavet, Dobis Co. and the Wells & Emmerson Co. have been in the plumbing and heating business at Port Arthur. Last year they decided to pool their interests in plumbing and heating goods only and to go out of plumbing and steam fitting, leaving this work to the younger concern. The latter had been buying large quantities of supplies but it was felt that it would be to mutual advantage to the trade in Port Arthur and Fort William to have a jobbing house in this important and growing centre between Toronto and Winnipeg. The new supply house is now well stocked with a full line of all the standard goods and enjoys the patronage of the master plumbers and trade generally in the New Ontario district, the withdrawal of the jobbers from the retail field leaving no ground for dispute and causing the best of feeling to exist between all branches of the trade.

MAKING OF ENAMELLED WARE.

ONE of the surest signs of the general prosperity of Canada, and more particularly of her plumbing trade, is furnished by the rapid growth of the Standard Ideal Sanitary Co., of Port Hope. Established only two years ago, this firm has made such progress that its plant is already three times its original size, and even this will be enlarged in the near future. A Hardware and Metal representative visited Port Hope recently and, guided by Mr. H. T. Bush, the genial manager of the company, was shown over the entire plant, where the numerous operations necessary to turn out fine enamelled baths, sinks, and tubs, were courteously explained.

The splendid new offices of the company were the first to attract attention. Situated on the second floor of a recent addition to the buildings, the offices command a magnificent view in three directions. To the north lies the picturesque Town of Port Hope, while eastward and westward the shores of Lake Ontario present a view which makes this office unique in the country. The interior of the offices is in keeping. Windows on three sides distribute the light almost perfectly, and even in the hottest weather the lake breezes make the offices most comfortable. The private office of Mr. Bush, the president and manager of the company, is finished throughout to harmonize with the mahogany office furniture, and is handsome in the extreme.

The plant of the Standard Ideal Sanitary Co. is situated on a neck of land 1,025 feet long, and containing about eight acres. In choosing the site, shipping facilities were of first importance, and a unique spot was selected for this purpose. On the east side of the works the raw material, such as coke, coal and pig iron, is landed at the very doors from boat or train, and on the west the shipping door opens on another spur line and wharf, whence the finished product is shipped in all directions. Thus no teaming is necessary, and a considerable saving is effected in the cost of production. Another important saving is effected by up-to-date methods. No heat is allowed to go to waste, but be means of automatic fans is utilized for enamelling and steaming purposes.

The process of manufacture includes so many operations that only an expert could hope to describe it satisfactorily.

Excursion party of Employes of Standard Ideal Sanitary Company.

The tubs are first cast in a mould, but the large size of the casting, and the thinness of the walls, make necessary skilled workmanship and unusual care. From the foundry the tub or sink is taken into the cleaning room, where it is trimmed and polished by sand blasts. It next moves into the slush-room, where the first coat of enamel is put on. This is a white liquid of such consistency that it spreads itself evenly over the entire surface. After this coat dries the article is taken into the furnace room, where it undergoes the most interesting operation of all. By the aid of huge tongs, the workmen easily put even the heavy baths into the furnaces, where a heat of 2,200 degrees expands the iron and allows the first coat to amalgamate with it. It is then removed, and while still red hot is laid on a table which, by means of levers, can be placed in almost any position. The real enamel is now put on in the form of a powder, which is sprinkled from pneumatic sieves. This operation is repeated, after which the bath or sink is put in a cooling oven, and the work of enamelling is over.

Mr. Bush firmly believes that the best work can only be done under the best conditions. The splendid situation of the works affords the most essential things in this business—good air, good light, and freedom from dust, and the work of the employes is made as easy as possible by the use of such aids as pneumatic hoists and cranes, which do away with all heavy work in the foundry.

The employes of the company, numbering 200, have caught the enthusiasm of their manager. An instance of this was afforded by the success attending their first annual excursion, which took place on August 3. The party accompanied by their own band, went by special train to Lakefield, whence they took a steamer up the beautiful Stoney Lake. At McCracken's Landing a most enjoyable day was spent, and the men are already looking forward to their next outing.

An encouraging feature of the Standard Ideal Co. is the outlook for an export business. Already goods are being sent to India, Buenos Ayres, Cape Town, and London, Eng., and Australia will soon be invaded. Altogether the expansion of the Standard Ideal Sanitary Co., indicating as it does the prosperity of the Canadian plumbing trade, is a matter for national congratulation.

Messrs. Cotter Bros., plumbers, Winnipeg, have been awarded the contracts of installing the heating and plumbing systems of the new post office. As is to be expected, the plans call for the most modern and up-to-date equipment.

WROUGHT STEEL PIPE AS COMPARED WITH WROUGHT IRON PIPE.

Written specially for HARDWARE AND METAL, by George Clapperton, Toronto.

THE manufacture of wrought pipe, while being of special interest to those who are interested in its production and sale, is of more than passing moment to steamfitters and plumbers; not alone because it is the principal material used in their trades, but the many inquiries they have to answer, giving their opinion as to the relative merits between the steel pipe as made to-day and the wrought iron pipe used in former days.

It may, therefore, be of interest to the readers of this article to have the benefit of what knowledge I may have gained of both the manufacture and durability of wrought pipe.

The first machine made pipe, was manufactured in America under patents secured from England about the year 1835, an industry that afterwards had enormous development. Prior to the time stated, pipe had been made by hand in England and America, and was necessarily very expensive, so that when gas was first introduced into the City of Philadelphia, old gun barrels were used as a substitute, until the supply became exhausted.

With regard to the original makers of wrought pipe, there seems to be some uncertainty, the claim having been made by Mr. Samuel Griffith, who had a furnace in Philadelphia, and Tasker & Morris, who were located in the same city, where they carried on a foundry business and made a specialty of manufacture of stoves and heaters. It is no providence of mine to endeavor to establish, as to which of these claims was correct; Griffith never reached a point much beyond his original venture, and Morris & Tasker & Co. expanded, and at one time controlled the pipe industry.

It is, of course, understood that all wrought pipe, made and used at the time mentioned was iron and butt welded, the lengths being about twelve feet long and the gross product about ten tons per week, and in order to protect same from foreign competition, it was decided to adopt a different standard of threads, to be known as the American guage.

From this small beginning has grown up one of the great industries of America: the present production of wrought tubular goods in America is not less than 5,000 tons per day, a capacity which equals, at least, that of England and Germany combined. Where the original range of sizes was from 1-2 inch to 1 inch, there is now manufactured from 1-2 inch to 30 inches, the larger sizes being lap welded instead of butt welded. The growth has, of course, been gradual, and much of it has been attained since the introduction of steel as a factor in pipe making, which was first done successfully in 1885 by Mr. F. J. Hearne, of the National Tube Co., which is one of the constituent companies of the United States Steel Products Export Co.

Pipe of the smaller sizes up to 3 inches, has been made successfully in Canada for the last sixteen years, mills being located in Montreal and in Guelph. The output of these mills has grown very rapidly, and last reports show that 100,000 tons of finished pipe annually, and it is fast becoming one of the principal industries of our country.

This innovation, you will readily understand, was vigorously combated by the makers of iron pipe, but slowly and surely steel has forced its way until it is to-day more of a king in the industrial world than cotton ever was.

I have reached a point where there may be differences of opinion and I wish express to say that any sentiments which I may express simply represent my experience and judgment. To my mind there is no question that iron pipe, as originally made from A1 quality pig iron, was for some purposes superior to the present soft steel article manufactured by the Bessemer process, but unfortunately commercial conditions have made it impossible to procure this pipe except at a price which would be practically prohibitory to the ordinary user, and we therefore have to choose between a so-called wrought iron pipe, which is manufactured largely from scrap iron and which, frequently contains a mixture of hard steel, which unfits it for many uses; particularly where you have to cut it up and thread it by machine.

Understand, I am making no charge of any unfairness on the part of the manufacturers, as it is necesary to bring the cost down to a point where they can make such selling prices as will enable them to compete with the cheaper article. It has become a choice betwen good steel pipe, and uncertain iron pipe, and my leaning is towards the former. Even if it were possible to get the kind of pipe our fathers used, there would still be many uses for which steel pipe would be preferable, paticularly where tensile strength is to be considered. To more readily understand the difference between iron and steel pipe, it might possibly be well to explain the difference in their production.

In making iron pipe originally, a high grade of pig iron was used, same being puddled by hand labor into what is termed "muck bar." This is then piled into fagots, which in turn are rolled into sheets of the proper size, the term for which is "pipe skelp." The skelp is then brought into the welding furnaces and brought to a finished condition.

The difference in making steel pipe is, of course, in the process. Previous to its reaching the welding furnace, where the work is practically the same, the steel process of to-day has simply changed the manufacture of the raw material from hand labor to a mechanical manipulation of the original melting stock; the only difference being that the steel ingot is cast and consequently devoid of the fibre which you find in iron. The steel pipe, owing to this process, has much more tensile strength than iron, and is therefore much more suitable for high pressure work. Iron pipe, when made as it should be, is undoubtedly more ductile than steel as made at present, but if, as claimed, there is at least two-thirds scrap placed in the puddling furnace, the result must be a bar, which is hard and uniform, in consequence, of which, the skelp of which the pipe is made, does not possess the ductile and welding qualities which formerly distinguished the iron pipe.

I have not touched on the matter of corrosion, because that becomes at times a matter largely of local conditions. I have seen cases where iron pipe did not give as good satisfaction as steel, and others where the reverse was the case, so that I think it is only fair to leave that question an open one.

There is another point in this connection which is an important one to the users of wrought pipe, and that is the matter, electrolysis. While I have no special data on this subject, I have heard it stated that wrought steel pipe will show less impairment from electrical action than wrought or cast iron pipe.

I think the efforts of the future will not be to make iron pipe to compete with steel at the expense of the quality of the former, but rather to improve the quality of steel pipe as to make it equal in every respect to iron pipe, leaving iron pipe to occupy the same position relative to steel pipe, as other iron products do to similar articles of steel.

IN NEW QUARTERS.

Mr. Fred. Somerville, manager of the Ontario Lead & Wire Co., Toronto, is now receiving admiring callers at his new offices at 59 Richmond street east, just off Church street. Many are the compliments he has received and the handshakes he has handed out since Saturday last, when the office staff deserted the Lombard street quarters and moved around the corner to the handsome new suite of offices. The plumbing supply showroom will be ready for Exhibition visitors, and photographs have been promised Hardware and Metal so that out of town buyers can see for themselves the beauty of the new headquarters of the firm. In the meantime Mr. Somerville is busy with his "glad hand."

The contracts for the Regina water works and sewage extensions have been let to Messrs. Dobson, Jackson & Fry. The contract provides for the putting down of 11,400 feet of water mains and the same amount of sewage extensions, and the contract figure is in the neighborhood of $23,400. The council has decided to give a trial to wooden water pipes and the contract for the supply of the pipes required for the extensions has been awarded to the Canadian Pipe Company, of Vancouver, who have also secured the contract for valves, hydrants and valve boxes, the value of the company's contract being $6,600.

FIRST ATTEMPTS AT SYSTEMATIC VENTILATING AND HEATING.

PRACTICALLY the history of systematic ventilation begins with the building over the House of Parliament, in London, in 1660, by Sir Christopher Wren, of four flues to carry off the heated air. Two of these flues are illustrated in Figure A. They are important only because they were made use of by J. T. Desaguliers, who was called upon in 1723 to devise a more satisfactory system. He built two closets, one at each end of the room above the assembly room, between the flues, cc, and put in pipes, ee, from the flues to square put in pipes, ee, from the flues to square cavities of iron, xx, that went round a fire-grate, b, fixed in the closets; as

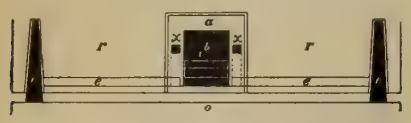

Figure A.1

soon as the fire was lighted in the grate the air came up from the house through the heated closets, and then went up their chimneys.

The thermo-ventilator became an object of hostility to the housekeeper, who did not like being disturbed in her possession of the rooms of which she had the use, and she defeated the operation of the ventilating closets by not having the fire lighted until the House had sat for some time and was very hot, for then the air in the closets descended into the rarer air, and the assembly room became hotter instead of cooler.

The uncomfortable members, seeing that the design for cooling the house was being frustrated, called upon Dr. Desaguliers to devise some contrivance which would be beyond the machinations of the housekeeper. The doctor, who some time before had made a machine

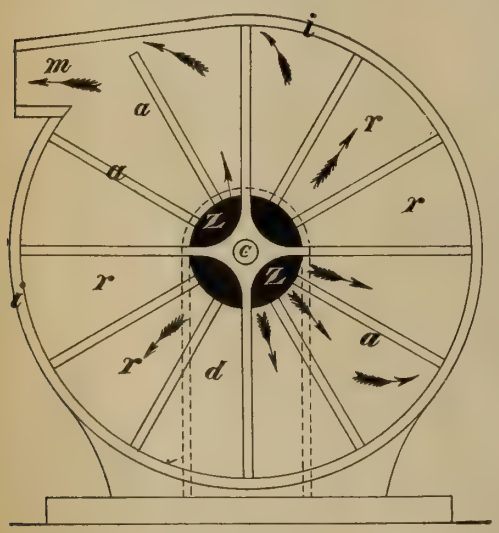

Figure B.

for freeing mines of foul air, put in one of these machines. The machine is shown in Figures B and C, and is, of course, the forerunner of the fan of the same general type now in common use. The wheel is described as being seven feet in diameter and one foot wide. The twelve radiating partitions, aa, approached to within 9 inches of the axis, leaving the circular opening z, 18 inches in diameter. The wheel was inclosed in the concentric case, i, which had a "blow pipe," m, on the upper part of its circumference, and a suction pipe, n, that communicated by a pipe, d, with the central opening, z, in the wheel, which was turned by the handle, e, attached to the axis, c, that went through the case and rested on a standard. The "fanner" was adjusted to revolve easily, but as close to its concentric casing, i, as possible, and it had no communication with the air except through the suction and blowing pipes. The wheel was turned by a man who received his ordets directly from the Speaker of the House. The apparatus was arranged so that when the suction pipe, n, was open to the atmosphere, or to a space containing heated air, and the blowing pipe connected with the room, the apartment was filled with cold, or with heated, air, in any desired quantity by increasing or decreasing the speed of the wheel. If foul air had to be drawn out, the suction pipe was connected with the room, and the blowing pipe with the atmosphere; and when it was not required to draw out foul or introduce fresh air, but to keep the air of the room in motion only, the suction and blowing pipes both opened into the apartment. In order to make the fan more effective, in 1791, is was moved into a position over the centre of the House. Desaguliers' contrivance, with some modifications, was in use for eighty years.

It would seem that at this time the members were annoyed with cold which did not depend on the ventilator, and, with an accumulation of heat, which did. On the advice of Mr. Adam Walker, a large stove, six feet on the side, and fourteen feet high, and filled with earthen pipes and retorts, was placed under the floor, and the air, warmed in moving through them, entered the house at a grated aperture three feet in diameter made in the floor. To improve the ventilation, two chimneys with cowls were placed on the roof. Their effect, being unconnected with the centrifugal ventilator, was to render its otherwise effective operation nearly useless.

The House of Lords also was not sufficiently warmed by the flues built under the floors, and its ventilation had always been very imperfect. Sir Humphry Davy devised a plan to ventilate and heat the room by admitting fresh air through a large number of holes in the floor and by withdrawing the foul air at the ceiling through two apertures covered with open wire-work, from which metal tubes were carried to the external air, and when extra ventilation was required, these tubes were heated to accelerate the velocity of the air passing through them. The whole plan was a failure, as Sir Humphry badly calculated the capacity of the tubes. The heating flues gradually cracked and permitted some of the furnace gases to escape into the hall, and finally in 1834, when a large quantity of waste paper was burned, the woodwork in the vicinity took fire, and both Houses of Parliament were destroyed.

When the temporary building for the House of Commons was supplied with heat and air, its atmosphere was quite as defective as any that had pervaded the ancient building. The modifications introduced by Dr. David B. Reid will be understood by an inspection of Figure D. The external air was admitted through a coarse gauze screen into a porch communicating by doors with a room under the house. At one of these doors was placed the heating apparatus, b, which consisted of a collection of hollow cases, formed of parallel cast-iron plates or pipes, containing hot water, and placed at a small distance from each other; the air from the porch, heated in passing through the intervals between them, flowed into the warm air chamber, d, from which it was conveyed

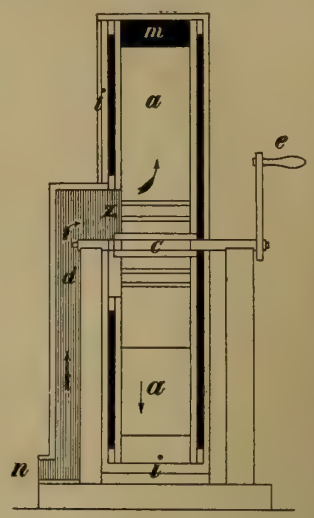

Figure C.

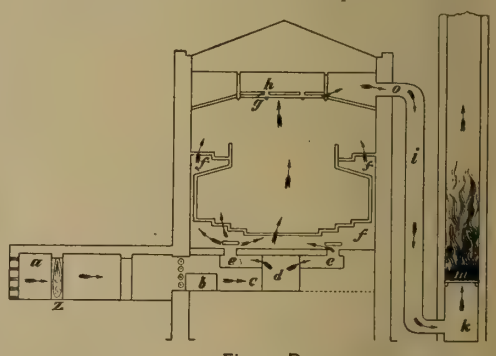
through about twenty apertures, ee, made in its ceiling, into a space formed under the floor of the house; from this space about 36,000 cubic feet of air rose every minute through several thousand holes about a sixteenth of an inch in diameter, made in the floor and under the seats in the pit and galleries. The ascent of this pure air into the house expelled the effete air through openings in the ceiling formed by some of the panels, with which it was ornamented, being raised about an inch above their styles. Through these apertures the air passed into the space h, under the roof, and thence it was conducted by the descending tunnel, i, into the ash pit, k, and, rising through the fire in the furnace, m, was emitted into the atmosphere at the



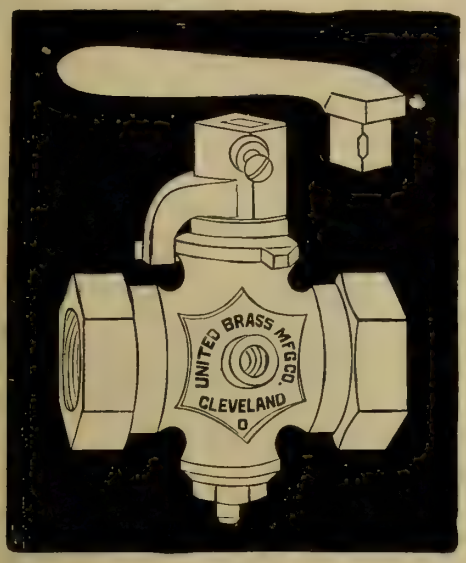


Figure D.

summit of a chimney stack about one hundred feet in height.

The room under the floor, that formed the warm air chamber, was partitioned so that by opening certain doors cold air could be admitted either to reduce the temperature of the warm air flowing into it from the heating apparatus, or to fill it with pure unwarmed air when that only was wanted. The air was also supplied with moisture previous to its admission into the house. The air received the necessary moisture by means of pipes filled with water, which were placed on the floor of the porch, and perforated with a number of small holes. —The Valve World.

MARBLE LAVATORIES.

Many Canadian manufacturing concerns have used the motto "Made in Canada" extensively to draw attention to the wonderful development of our manufacturing industry. This development has been not only in the quantity but also in the quality of the articles produced, an illustration of this being shown in the accompanying cut of one of the marble lavatories manufactured by the James Robertson Company, Limited, in their works at Toronto.

The cut shows an Italian countersunk lavatory, 24 x 33 inches, with back and mirror frame in one piece, bevel mirror and marble shelf, Robertson's nickel-plated brass trap and brass recess legs, nickel-plated supply pipes with stop valves, nickel-plated brass Fuller basin cocks, 15 x 19 inch oval basin, and nickel-plated chain stay and chain with brass basin clamps. All of this work is "Made in Canada" with the single exception of the bevelled mirror, which is the best that can be imported. The marble work is of selected stock, deeply

Robertson's Marble Lavatory.

countersunk, carefully finished and highly polished.

CENTRAL HEATING PLANT.

IF arrangements at present in progress with the Port Huron city council can be carried out, Port Huron will have a $50,000 central steam heating plant, similar to those which have been recently established in many metropolitan cities of the United States.

A thirty-year franchise is granted by the city council. The company will commence the putting in of the system at once, to be completed in three months and ready to furnish heat when cold weather comes at about the bare cost of the coal.

A large power house will be erected and steam heat will be furnished to business houses, public buildings, stores, offices and residences, at an expense said to be much less than the cost of maintaining individual heating plants.

The method of heating on the co-operative plan is much the same as the system of gas heating and lighting. Pipes are laid along the streets at a depth sufficient to prevent them from being affected by cold. Service pipes are connected with business houses or residences, and the heat is forced through from the main plant.

The Port Huron men who have interested themselves in the scheme have looked carefully into the experiences of other places, and have learned that wherever central steam heating systems have been established they have met with unqualified success. It is claimed that there is no trouble about maintaining steady and equable heat whatever the weather. There is a great lessening of cost as compared with ordinary methods of heating; and there is, of course, a complete saving of the trouble attendant on running stoves or furnaces.

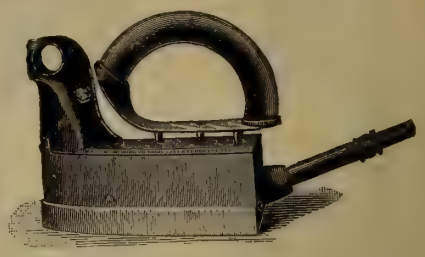
ELECTRIC LAMP BRACKET.

Mechanics and others who work on important jobs in dark corners or after daylight has gone will be interested in the electric lamp bracket which is manufactured by Henry Wallworth & Sons, Limited, Manchester, England. The feature of the bracket is its ball socket, which allows it to be placed in almost any conceivable position very easily and with perfect safety. It is claimed that the bracket will sustain a weight of four pounds at a radius of three feet, and that it will not damage or strain the flexible wire. The advantages of this scheme for such work as armature winders, marking out tables, large radial drills, etc., are obvious. The manufacturers have appointed as their Montreal agents McLean & Sophus. Mention Hardware and Metal in writing for particulars.

TORONTO SUPPLY MAN HURT.

What might have been a very serious accident occurred in Toronto last Friday, near the corner of Church and Charles streets. Mr. W. B. Malcolm, proprietor of the Queen City Brass Foundry, 64 Lombard street, and one of the oldest and most popular supply men in Ontario, in some manner fell from a moving street car near his home. The momentum of the car swung him around and he fell on his back, receiving a severe scalp wound which required several stitches. He was unconscious for some time, and the bad shaking up he received will keep him in his bed for a week or two. Danger of fatal result has now passed away and the trade will be glad to learn that Mr. Malcolm is doing as well as could be expected and will be around again soon.

ELECTRIC FANS.

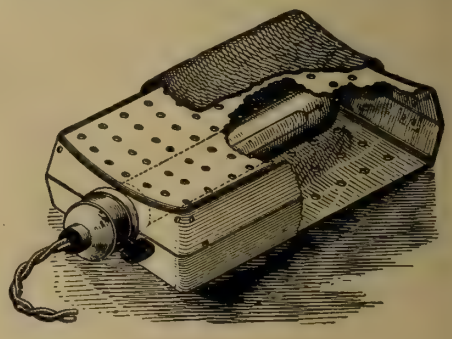


It's an ill wind that blows nobody good, and this Summer's heat, distressing as it has been to the average mortal, has made great business for the manufacturers of electric fans. The demand this year has exceeded anything that was expected, and, in consequence, some of the smaller firms find themselves short in their supply.

Electric fans are no longer a luxury to be enjoyed only by the extremely well-to-do, and the price now quoted on them is within the reach of nearly all. The fans also are being found useful in Winter, as well as in Summer, for the purpose of keeping display windows clear of frost. This is a great boon to the retail dealer, who takes pride in a tastefully decorated window.

Next season promises to add still further to the popularity of this comfort-making article, and manufacturers will prepare for a still greater demand.

GAS HEATED SAD IRON.



A GAS heated sad iron, manufactured by the Central Mfg. Co., 196 State street, Binghampton, N.Y., has been put on the market, its construction being shown in the accom-

panying cut. It can be used for domestic or steam laundry use, natural or artificial gas. The burner is of an improved Bunsen type, using several times as much air as gas to make the expense of heating merely nominal. It is explained that the use of the iron is unaccompanied by escaping flame, smoke, soot or smell, and that as the flame is entirely inclosed the bottom of the iron is always clean and ready for use. The weight of the iron is about 6 pounds and its length 6½ inches. The handle is of semicircular pattern, and being protected from the body of the iron by an air space does not become hot. The iron, it is remarked, will heat quickly and evenly and can be made hot enough for ironing a wet tablecloth or cooler for use on a cambric handkerchief.

ELECTRIC HEATER.

As a substitute for a hot water bag, a resident of Napoleon, Ohio, has devised the electrically heated bag, which is illustrated herewith. It consists of an incandescent electric lamp, inclosed by a perforated metal casing. The device may be connected to any electric lamp socket, and when the current is turned on the lamp will heat the casing.

Electric Heating Bag.

Over the latter a bag of soft fabric is placed, to prevent direct contact of the metal with the body. One side of the casing is made slightly concave, in order that it shall conform to the body when hot applications are made. The casing is made detachable, so that it

may be removed when the lamp burns out, to permit of renewal. The advantage offered by this heater over the ordinary hot water bag is that it will remain hot continuously and at a constant temperature, whereas a hot water bag will rapidly become cooler as the water loses its heat.

A SEASONABLE ARTICLE.

AN article that should meet with an especially large sale throughout the Fall and Winter is the Twentieth Century White Flame Heat and Light Burner, being placed on the market by the Twentieth Century Manufacturing Co., of New York. This article, which is illustrated herewith, is composed of three separable parts, and in packing are nested compactly in a pasteboard box, the whole package weighing 18 ounces. This burner can be used to good advantage by the hardware dealer for window display, as it not only furnishes light, but at the same time it attracts attention, sells itself and prevents the frosting of the window. The Twentieth Century Co. furnishes with each order a large assortment of attractively printed showcards, electrotypes for local advertising and circular matter. In cold climates the "White Flame" keeps the house comfortable in Spring and Fall, delaying "furnace time," and in dead of Winter there are

White Flame Heat and Light Burner.

frequently bath rooms and other places about the house that would be better for extra heat, particularly when one can have it with no cost beyond that for the usual illumination. The "White Flame" attaches to any chandelier, wall bracket or portable stand.

PLUMBING GOSSIP.

Montreal plumbing contractors report business very brisk, and many who wished to attend the convention at Winnipeg were unable to do so, owing to the pressure of business. Journeymen plumbers are hard to get, and it is feared that there will be a scarcity of steamfitters when the season's rush begins.

* * *

Thomas O'Connell, Ottawa street, Montreal, reports the following recent contracts for plumbing and heating: St. Agnes Church, St. Denis street; St. Bridget's Refuge, Lagauchetiere street; Troy Steam Laundry, Verdun; Catholic High School, Desrocher street.

* * *

The journeymen plumbers of Montreal held an enjoyable picnic at Iroquois last Saturday, going there by rail.

Messrs. Sumner Company, Moncton, N.B., report a big trade in their plumbing and heating business. In addition to local work they have their gangs of men at outside points. At Sackville they are putting in hot water heating in the upper floors of the college residence, there being some 69 radiators in the plan. Plumbing is also being installed in the same floors. At Shediac plumbing is being put in Mr. McQueen's residence, while at Dorchester general repairs are being made in the heating of the court house and jail.

* * *

Sudbury is to have a new public school, 68 x 82 feet, two storeys and basement, and containing eight rooms. The newest German system of ventilating, by which the air in a room is changed every twenty minutes, will be adopted. When fully completed the cost will be in the neighborhood of $20,000. Lawson & Busby are the contractors.

* * *

The Municipal Water and Light Company, Limited., have their steam ditcher at work at Pincher Creek, and the laying of the water mains will begin immediately. When the system has been installed the town will be provided with as good water and as efficient fire protection as any town in the west.

* * *

An agreement has been drawn up between the town of Port Hope and the Standard Ideal Sanitary Company. The town desires to induce the company to locate a new factory there to manufacture waterworks supplies. The company agrees to erect a building costing some $8,000, to employ not less than twenty-five men for ten months in each year and to put into the new enterprise not less than $25,000 of capital. On its part the council is to grant exemption from taxes, except school taxes, for ten years and to make the company a grant of $5,000.

* * *

Hospital sanitation is a subject which is of great importance, not only to plumbers but to the entire community. In a recent article by Wm. Paul Gerhard, of New York City, in the American Architect on the subject, it is stated that one bathtub should be provided for fifteen patients, that it should be located in the centre of the room, so an attendant can stand on any side of it, and that the cocks should be provided with key valves. In insane hospitals soil and waste pipes should be of an extra large size, on account of the refuse sometimes thrown in the fixtures by that class of patients.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, August 18, 1905.

COPPER and brass goods have been the issue on the market this week. There is a great scarcity of copper, probably due to the control of the bulling interests on the exchange. The result will inevitably be to boost the price of all copper and brass products.

Business is keeping up with remarkable persistence, and large orders are being placed in all lines. Big developments are bound to come in enamelled ware during the next year, throughout this Province, and the large supply houses are making extensive preparations to meet the demand. The best grades of Canadian and American goods are attractively displayed, and it is encouraging to note that the domestic product is gaining rapidly in favor.

Though pig lead is as strong as ever, lead pipe remains at the old figures, and is very steady.

Range Boilers—Share in the general activity of the market.. We quote: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Contrary to general expectation, there has, as yet, been no advance in this line. Our prices are as follows: Discount 30 to 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B.. and Halifax; f.o.b. London, 15c. per hundred lbs. extra.: f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—No change is chronicled in the price of iron pipe fittings. The market is strong. We quote: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—There has been no special feature in this market during the week, but the trade has kept up strongly. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—A satisfactory trade is being done and a good business is looked for throughout the Fall. We quote as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, Aug. 18, 1905.

BUSINESS could not be much better for the Summer season than it has been recently. The supply houses are selling such large quantities of goods that the manufacturers, working their factories at their utmost capacity, find it impossible to keep up with their orders. The supplies of enamelware, traps and bends, closet bowls, etc., are all on the short list, in some cases orders a month old being still unfilled.

Prices are firm on nearly every line, the surprising demand allowing no weakness to result. On the other hand, the recent advances tend to higher prices. Last week saw solder go up on this account and the indications are now that lead pipe will participate in the advance. Some expect a rise on iron pipe also and some large stocks are being laid in by jobbers. So far, however, this is all surmise.

There are no changes to report this week.

Lead Pipe—Prices are very firm, and an advance is looked for. We quote: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—Demand is very keen, but supplies are plentiful We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Buying is heavy and prices continue very firm. Our quotations are as follows: Cast iron elbows tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.: Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers— The large amount of building accounts for the general activity in buying. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Some dealers are buying large stocks in anticipation of an advance. Prices are firm. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder— Last week's prices hold firm. Our quotatoins are as follows: Bar solder, half and half, guaranteed. 19 1-4c.; wiping solder at 17 1-2c., and refined 17 3-4c.

Enameled Ware—Demand continues exceedingly strong for Canadian ware, but manufacturers keep well up with their shipments. Our quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50, special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

LOCATION OF RADIATORS.

IN spite of the successful efforts which many firms have made to put on the market cast iron radiators which are both efficient and ornamental, many people still object to the room they take up in a residence.

This brings up a problem to which architects have paid scant attention in drawing up their plans. Long since provision was made by architects for concealing all objectionable pipes necessary to sanitation, and the question arises why some scheme cannot be devised whereby the heating apparatus could be put out of the road without damaging its efficiency ?

A good plan suggested has been to place radiators so as to hide them under windows, but this is not always possible. Under existing conditions, however, this is, perhaps, the best arrangement possible.

A Michigan professor has brought forward another idea, which would revolutionize not only inside architecture, but also the manufacture of radiators. He proposes that "the base-board of a room be made of iron and hollow, and through it be circulated either water or steam." If this scheme is ever adopted, no doubt the manufacturers will aspire to make back-boards as ornamental as

HOLLOW-WARE

PRESSED, STAMPED, and MACHINE-MADE

ENAMELLED, TINNED, GALVANIZED and JAPANNED

We manufacture every description of Hollow-ware and we guarantee that every piece is made wholly on our own premises. Our average weekly capacity, is over 700,000 pieces, of Tinned, Galvanized and Enamelled ware. Our Enamelled ware is of superior durability and finish, and is guaranteed free from any poisonous substances.

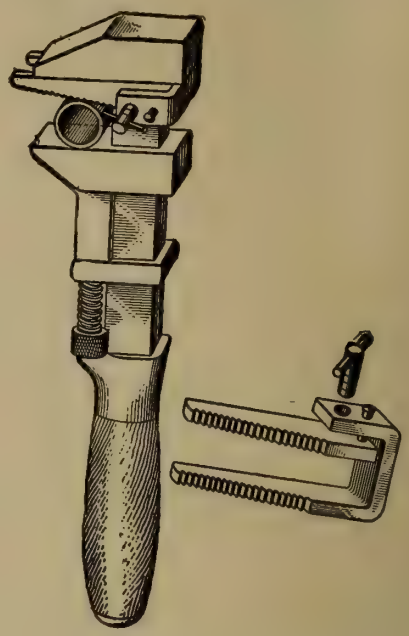
they have already made steam and hot water radiators. This is a question on which plumbers will no doubt take one side or the other, and Hardware and Metal would be very pleased to have them air their views in its Plumbing and Heating Department.

INTERESTING ITEMS.

An exhibition of plumbing and sanitary appliances has been held in Paris during the past month. It was organized by a local journal, "Le Batiment, and was divided into four sections — roofing materials, water fittings, gas lighting and heating, and bathroom apparatus.

Herr Carl Wichera, Freiburg, Baden, has introduced a form of globe for incandescent lamps in which the thickness of the glass is greatest at the bottom and diminishes steadily towards the upper rim. The effect of this is to divert the light so as to make most of it come downwards.

In spite of the excellent quality of the Vienna drinking water, which comes a distance of some 116 miles from Alpine glaciers and snowfields of the Alps, several cases of poisoning have occurred in a particular district of the city. Careful investigations proved that the source of the poison was lead contained in the water pipes supplying that district.



There is no country in the world in which workmen are so protected by the state or are so cared for as in Germany. Even clerks and shop assistants and servants are compelled to insure. This insurance is effected by pasting stamps into a book every week, and it is the duty of the employers to see that this is faithfully done. It represents the small premium collected every week on the insurance.

A septic tank sewage disposal system has recently been installed for a college in Sydney, N.S.W., with a capacity to dispose of the sewage for 200 people. There are two covered tanks 15 ft. by 78 ft., and from these tanks the sewage passes to a 14 ft. by 10 ft. steam filter, 8 ft. deep. The sides of the filters are battened one to six, and gravel is used as a filtering medium. A pit receives the filtrate, from which it is pumped to the college farm. This filter, which is the first continuous streaming filter in Australia, cost about $2,900.

Preventing back water entering soil stacks in a large Pittsburg building is accomplished by having all the fixtures on the basement and first floor located on a separate stack, which is cut off by gate valves in times of high water. The upper floors discharge through the main house stack under a head, so while a portion of the building is without the use of sanitary appliances, the larger portion is not deprived of their use.

PIPE-GRIPPING MONKEY WRENCHES.

A RECENT patent provides a very simple means for converting an ordinary monkey wrench into a pipe wrench. It consists of a pair of toothed members, adapted to be fitted under the upper or fixed jaw of the wrench. One of the toothed members is formed with a U-shaped body, adapted to embrace the stock of the wrench and overlap the other toothed member. The device is clamped to the wrench by means of a clamping screw in the overlapping end, which may be turned to press the adjustable member against the stock. The adjustable member carries a guide pin, which extends through the overlapping portion. At the top of the pin a head is formed which holds the

two parts together, thus preventing one or the other being mislaid or lost. The advantages of this invention should be apparent to any mechanic.

EXTENDING FOUNDRY PLANT.

THE general activity in building throughout the Dominion has created an unusual demand for building materials, so much so that the supply has proved quite inadequate. Thus many of our local manufacturers have been forced to extend their plants in order to meet the requirements of the trade.

The Toronto Foundry Co., Limited, have just completed a large addition to their already extensive moulding shop at the plant on Jefferson avenue, whereby the output of soil pipe and fittings will be doubled. The new shop is 100 feet in length by 75 feet in width, being what is known as "double foundry construction." This building, like the rest of the plant, has been built with the heaviest of materials and is practically fireproof. The whole plant is being equipped with an overhead trolley system for conveying the molten metal to the various floors and for handling the pipe and fittings in their passage from the foundry to the milling and finishing rooms.

Many other improvements are being inaugurated which will tend to add to the already enviable reputation this firm have acquired for the line of goods they handle. With a capacity for 30 tons of pipe and fittings per diem, the Toronto Foundry Co. hope to be in a position to keep up with the trade, no matter how heavy the demand. In order that a heavy reserve stock may be carried to meet emergencies, an additional commodious warehouse, 200 feet in length, is in the course of construction and will be completed before the Winter months have set in.

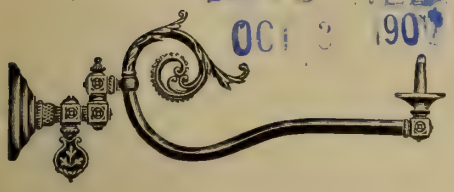
ELECTRICAL GOODS AND SUPPLIES

BEAUTIFUL ELECTRIC FIXTURE.

HAMMERED brass lighting fixtures are very popular in Europe, and the United States at present, there being a revival of the ancient art of many centuries ago. The accompanying cut shows a very beautiful electric wall fixture, recently turned out by the expert operators employed by the James Morrison Brass Manufacturing Co., Toronto. All the work is done by hand, the odd dragon design and antique finish being hammered out of sheet brass. In order to show the fixture to good advantage, the bead curtains were removed from the central bulb. The fixture will probably be shown at the coming Canadian National Exhibition, where it is certain to attract the attention of all artistically inclined visitors, who are looking for articles suitable for home adornment.

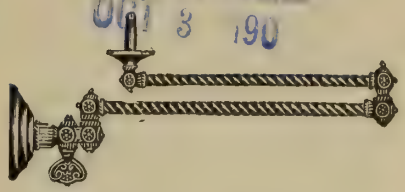
Handsome Wall Bracket, executed by Jas. Morrison Brass Mfg. Co., Toronto.

ELECTRICAL GOODS PAYING LINES



ELECTRICAL goods are one of the last lines to be taken up, but by no means should it take rank with the least, for it is profitable and satisfactory to a large degree. There is less of care and attention demanded for it than for any other the writer has in mind. This statement is based on a conservative, safe stock for ordinary merchandising, and does not include installation and all the attendant intricacies of a strictly electrical business. It is easy to draw a line and separate those parts that sell over the counter as against the expert end of the business. It seems to the writer it would not be policy to consider installation and expert wiring at any stage of the hardware merchant's busy life, for the reason that, like plumbing and all expert work, this part of it should be done by a professional, or at least, by one who is more than a student or clerk. The danger of doing improper, ill-fitting and cross wire work is too evident.

A Line Safe to Carry.



It is a profitable one, carrying with it but little, if any, loss, and realizing as much average profit as any goods that go over a merchant's counter. It is true the goods do not sell as rapidly as some lines, but they are always in good condition, and when wanted by the customer, are badly wanted. I submit quantities also, based on a similar stock with which the writer started some years ago.

1-2 dozen No. 1 liquid or wet batteries.
1-2 dozen No. 2 liquid or wet batteries.
25 good dry batteries.
25 pounds of sal ammoniac.
2 No. 10 spools No. 18 annunciator Wire.
25 pounds No. 14 water proof wire.
1-2 dozen 2 1-2 inch iron bells.
1-2 dozen 3 inch iron bells.
1-4 dozen 3 1-2 inch iron bells.
1-4 dozen beehive buzzers.
1-4 dozen iron box buzzers.
1-4 dozen common tape.
2 dozen com. sq. zincs.
5 pounds small staples.

GOOD PRICES IS ONE OF OUR SPECIALTIES.

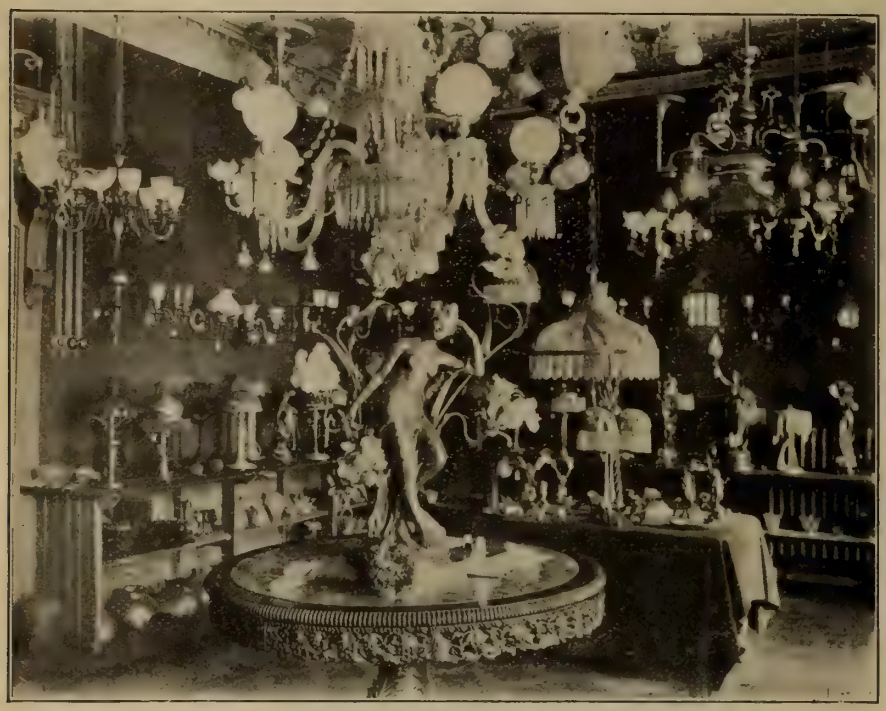
All of the above quotations are for dozen lots or more Portables and Brackets, and above prices do not include shades or other fittings, except where specified. All prices F. O. B. Montreal.

THE SAYER ELECTRIC CO., MONTREAL

10-12-14 BEAVER HALL HILL

1 dozen window alarms, etc.

This should readily be a money making stock. There is nothing to spoil, no style to change, and, with the omission of the hand and pocket lamps, the stock would not cost to exceed $40, and the near at hand jobbing stocks to draw from will easily and always keep it full.



Batteries and Automobile Supplies.

All sorts of batteries are now in almost universal use, and the coming of the automobile makes a ready sale for the better grades of dry ones. The smaller, as well as the larger, manufacturer of gas engines makes a constant demand for batteries, switches, waterproof wire, spark coils, etc., and in talking here and there with customers, with salesmen and the amateur electrician, both employer and clerks will easily pick up the gift of gab in connection therewith, so that selling will be as easy as is any other line.

Additions as trade grows are easy to make, and every addition adds a profit. There is no end to the lines of electrical lamps, electrical fans, toy and amateur motors, electrical tools and the hundred and one things of this class being put on the market, all of which sell over the counter and at a good round profit. By all means add a small stock. It is more than profitable, in that it brings sale of other lines, and one great point is it occupies but little space and the goods are clean and attractive. H. C. W. in the "Iron Age."

DISPLAY OF ELECTRICAL FIXTURES.

A MOST expensive and artistically arranged suite of electrical showrooms are those of the Henry Morgan & Co., of St. Catherine street, opposite Phillip's square, Montreal. This department represents a house, being composed of a hall and three rooms. Each room is decorated with different material, of different colors. The green room, which the accompanying illustration shows a part of, is the largest and most expensive room of the number. The walls are covered with green burlap, as wall at a height of from 2 1-2 to 3 feet are the shelves which run along each from the floor The fixtures that are displayed from the ceiling, from the wall, and on these shelves, are connected by means of covered wires to switches. The mere pressing of a button will show a customer the effect of the fixtures when in use. The lighting system, for the fixtures displayed on the shelves, is operated by means of Chapman plugs, which are situated near the back of the shelf. These are operated by separate switches near the front of the shelf, and connected with the fixtures. In this room are displayed some of the most expensive fixtures to be found in Canada.

Handsome Display of Electrical Fixtures.

These fixtures which are manufactured of old brass, polished brass, oxidized silver, wrought iron, bronze work, marble work, and many others, are imported exclusively from Germany, France, Italy, Belgium, and England. Departing from this room, we enter the hall. In this part of the department is displayed all such fixtures as may be used conveniently in hall or porch of a dwelling. Proceeding onward, we enter the red room, where the medium class goods are kept. The walls of this room are covered with red burlap, and, to correspond with the walls, the decorations of the room are of a like color. Here, as elsewhere, the fixtures are all connected with wires. Leaving this room we enter the room where a cheaper grade of fixtures are displayed. This part of the department is called the blue room, because of the color of its trimmings. By means of these separate rooms the average purchaser may gain a fair idea of what style of fixture is wanted for the different compartments of the home. When this point has once been settled, the device of lighting each fixture materially helps the customer to decide much more quickly in purchasing.

TIME SWITCH.

THE Canadian agency for the Campbell time switch, as is illustrated herewith, has been secured by the Sayer Electric Co., of Montreal. This time switch is a new departure in the line of shutting lights off, and on automatically. It is neat in design and can be placed anywhere the wires happen to run; no shelf to build, no closet necessary, can be installed in five minutes, is artistically finished, well made and reliable. The clock can be detached in a second, and replaced as quickly. These switches are made from 10 to 35 ampere, double pole or triple. Style "A" turns light on or off. Style "B" turns light on and off. The prices are very moderate.

The Campbell Time Switch.

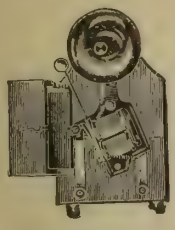
RAILWAY WRECKS AND THE STEEL TRADE.

NEW activity has been given to the steel trade by the large orders for steel cars which are being placed by some of the big companies. The disastrous wrecks recently suffered by the eighteen-hour flyer on the Pennsylvania and Lake Shore Railways, have called the attention of officials to the danger of wooden cars, in collisions, while tests have shown that steel cars are comparatively uninjured even in serious wrecks.

Among recent orders for cars may be mentioned the Pennsylvania Railroad's call for 18,000, most of them to be made of steel. This opens up the prospect of a large business in this line, and an added impetus will be given to the steel trade.

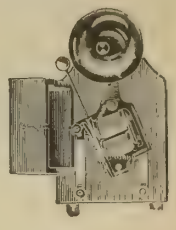
Meanwhile, the railways continue to keep the rail mills busy, in spite of the remarkable orders which have been placed during the past few months. There is no abatement in the demand for fabricated steel, and the trade generally is in a most satisfactory condition.

MONTREAL BOARD OF TRADE.



A new rule adopted by the Montreal Board of trade provides that the use of the rooms of the Board shall be restricted to its members. A doorkeeper will be placed at the entrance to the Exchange Hall and members must be recognized or show their membership cards. A local stock ticker and Associated Press dispatches have been added to the commercial information supplied by the Board and a feature is to be made of the personal association of the members between 12 noon and 1.30 p.m.

NOT TOO EARLY.



Now is the time of year for the live hardware merchant who is thinking of store to come to a decision. If it is to be a stove, it may be all right to wait until the cold weather is at hand; if it is a hot-air furnace or hot-water system, which requires some time to set up, it is none too early for him to complete his arrangements now.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

882. A Midland firm manufacturing special cold blast pig iron for use in foundries and forges is prepared to appoint suitable Canadian resident agents.

883. A London company manufacturing bearing metals of all grades is open to appoint suitable Canadian agents.

887. The makers of a successful form of agricultural motor which will haul 3-furrow ploughs, mowing machines, reapers and binders, and in addition drive threshing machines, chaffcutters, mills, pumps, dynamos, etc., desire to sell their patent rights for the manufacture of the motor in Canada.

893. A Bristol firm wants to be put in touch with some Canadian firm that could handle a pure vegetable concentrated boiler preservative composition.

895. A Bristol firm wants a Canadian market for "Condor" brand steam joint cement.

PIONEER COMPANIES PROTECTED.

FOR some time past the American Steel Corporation has been casting envious glances at the large and growing trade of the Dominion. Indeed, it had almost decided to establish a Canadian branch, but it is reported that this idea has been abandoned, for a time, at least.

The reason for this is said to be that the Canadian Government has unofficially advised the officers of the corporation that in the event of their establishing a branch here the bounty which is granted to Canadian-made steel would be withheld in their case.

The consumption of steel in this country, though growing, is still limited, and the Government rightly considers that the pioneer industries are entitled to privileges which cannot be granted to those who wish to share in the benefits of the Canadian trade without having experienced its early difficulties. Furthermore, Canada has no sympathy with the methods which have resulted in the steel corporation dominating the United States market, and our own iron and steel industries must not be swallowed up by this aggressive monopoly.

That the steel corporation has thus been driven from the intention of invading the Canadian market is by no means probable, but it is encouraging to know that the Government is alert to ward off foreign trusts and monopolies.

A TRAVELER'S STORY.

In one of the country stores, where they sell everything from a silk dress and a tub of butter to a hot drink and a cold meal, a lot of farmers were sitting around the stove one cold winter day, when in came Farmer Evans, a typical resident, who was greeted with:

"How d'do, Ezry?"

"How d'do, boys?" After a while he continued: "Wa-all, I've killed my hog."

"That so? How much did he weigh?

Farmer Evans stroked his chin whiskers meditatively and replied: "Wa-all, guess."

"'Bout three hundred," said one farmer.

"No."

"Two seventy-five?" ventured another.

"No."

"I guess about three twenty-five," said a third.

Then altogether demanded' "Well, how much did he weigh?"

"Dunno. Hain't weighed him yet."

Other men kept dropping in and hugging the stove, for the day was cold and snowy outside. In came Cy Hopkins, wrapped in a big overcoat, yet almost frozen to death; but there wasn't room enough around the stove to warm his little finger.

But he didn't get mad about it: he just said to Bill Stebbins, who kept the store: "Bill, got any raw oysters?"

"Yes, Cy."

"Well, just open about a dozen and feed 'em to my hoss."

Well, Stebbins never was scared by any order from a man whose credit was good, as Cy's was, so he opened the oysters an' took them out, and the whole crowd followed to see a horse eat oysters. Then Cy picked out the best seat near the stove and dropped into it as if he had come to stay, as he had.

Pretty soon the crowd came back, and the storekeeper said: "Why Cy, your hoss won't eat them oysters."

"Won't he? Well, then, bring them here an' I'll eat them myself."

By an acetylene explosion in the premises of A. E. Jones, baker and confectioner, Caledonia, Ont., twenty-two people were injured, the majority of them seriously. It is supposed that a leakage in the pipes connected with the machine from which the gas is produced caused an oversupply of gas to accumulate in the cellar of the premises.

TO INCLUDE ADULTERANTS.

The Ontario Board of Health have approved of Dr. Hodgett's recommendation that all milk adulterants be dispensed with. Accordingly, the doctor is communicating with the Minister of the Interior urging legislation from the Dominion Government excluding the importation of all such preparations to the country.

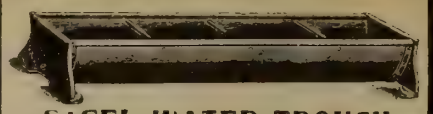
STOVE MANUFACTURERS MEET.

At the annual convention of the American Foundrymen's League, held at Niagara Falls last week, these officers were elected: President, E. C. Stearns, Syracuse; vice-president, Edward Gurney, Toronto; treasurer, J. B. Jones, Utica; secretary, William Sleicher, New York. The next convention will be held in New York. An employment bureau for moulders not affiliated with a union will be established in the United States and Canada.

STOVE MICA.

A subscriber requests Hardware and Metal to supply the names of producers of stove mica in other Canadian centres than Toronto and Hamilton. The producers of the best class of mica for stoves are in the two cities mentioned, but if any correspondent can supply the name of any concern in another district producing high-class goods our subscriber will appreciate the sending of the information through these columns.

K. B. THORNTON LEAVES MONTREAL.



Mr. K. B. Thornton, electrical engineer, who has been connected with the Montreal Light, Heat & Power Co. for the past thirteen years, has resigned, to accept a position with the J. G. White Co., of New York, with which the Canada White Co. is allied.

Mr. Thornton, who is one of the best known electrical men in Montreal, and president of the Canadian Electrical Association, graduated from the Central Technical College, South Kensington, London, England, thirteen years ago, and came thence to Montreal. He became identified with the manufacturing department of the Royal Electrical Co., which developed into the Montreal Light, Heat & Power Co., where, for nine years, he has been connected with the operating end of the business.

In his new position, Mr. Thornton will be associated with the 2nd vice-president of the J. G. White Co., Mr. P. G. Gossler, who was for many years general superintendent and chief engineer of the Montreal Light, Heat & Power Co. Mr. Thornton carries with him the best wishes of his many Montreal friends.

A feature of the development of the "Soo" industries is the large amount of wood which is cut for the various departments of the work. In one year this included 120,000 cords of wood for charcoal used in the manufacture of steel, 130,000 cords of pulp wood, 10,000,000 feet of pine for the saw mills, and 200,000 feet of birch for veneers. This forest wealth is not wasted or sent out of the country to build up foreign industry, but is converted into products of greater value in Canada.

HARDWARE MEN: Our

STEEL WATER TROUGH

is a seller—something the average farmer has been waiting for.

We assist the trade by way of generous supply of literature, besides which we are advertising in the farm mediums.

We will make you an interesting proposition; so write us at once that you are open to consider the agency in your district. We appoint one representative only in all medium size towns.

It's worth having, believe us, so write for it to-day. STEEL TROUGH & MACHINE Co. TWEED, Ontario Limited

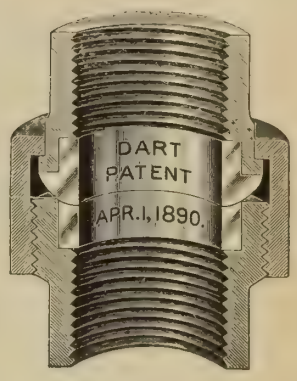
SOME PLUMBERS ARE BLIND



to their own interests when it comes to a question of Valves, Fittings and Steam Goods of every description.

They never pause or endeavor to discriminate between poor quality and the best quality.

The reason we keep "drumming" you constantly regarding Fairbanks Valves, Steam Goods and Specialties is because we really know the quality of our goods to be the very best. This is the open secret of our success and growth in business in Canada.

No one has ever built up an honest lasting trade on poor quality of goods. See the point?

CURRENT MARKET QUOTATIONS.

Aug. 18, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MacLEAN PUBLISHING CO., Limited

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

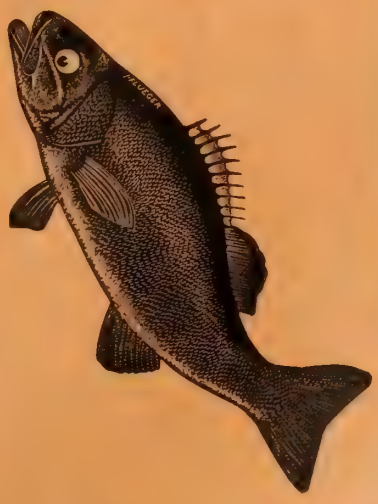
"Open Ring" Pattern

Niagara Cow Ties

Possess certain obvious advantages which have brought them into exclusive use throughout all the great dairying sections in Canada and the United States. We have made these Cow Ties for many Fancy Dairies in the past, and they have now become a regular item of the Hardware Dealers' Stock.

The SWIVEL is made of Steel and is much stronger than any Malleable Swivel, while its action is so free that it never sticks on account of rust.

The TOGGLES used on our Cow Ties are forged from BESSEMER STEEL, by a patented process.



The TOGGLES are so arranged as to always hang at right angles to the Chain, which prevents their becoming unfastened from same.

In a crowded stable this method of fastening confines the animal more and obviates all danger of being stepped upon when lying down.

The Fisk

Detachable Motor Tire

Notice these improvements over other mechanically-fastened tires :

The solid base, which forms a firm, flat surface to travel on when the tire is empty. It prevents injury to the tire when it is run flat and adds to its safety in case of puncture.

The circular air-chamber, which keeps the inner tube from pinching or buckling.

The simple method of attachment, by which the tire can be removed or replaced with an ordinary wrench, quickly and easily.

Manufactured in Canada solely by

Made in 6 Sizes:

No. A---Screen Doors
No. B---Inside Doors
No. C---Small Outside Doors
Nos. D and E---Outside Doors
No. F---Extra High and Large Doors

WE CAN SHIP ALL SIZES PROMPTLY

CORBIN LIQUID CORBIN
DOOR CHECK

THE CORBIN DOOR CHECK and SPRING fulfills in the highest degree the exacting requirements of an article of its kind. It is symmetrical and ornamental in appearance, is smooth and noiseless in action, can be regulated to any desired speed and to overcome any kind or amount of draught, is simple in construction and of ample strength, and is sold at a moderate price.

The six different checks govern the action of doors of all sizes and weights. Every check is tested in actual use before shipment is made and no pains spared to make the Corbin check worthy of the esteem in which it is held by dealers and users alike. It is justly the most popular in the market, and among the reasons for its popularity are the patented features which are found in it viz., the double piston, the method of packing and the supplemental chamber.

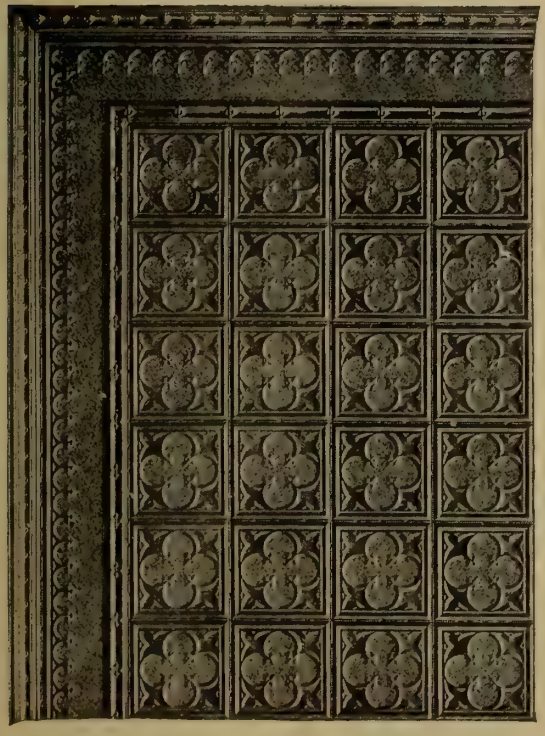
WHY
and
WHERE



We will tell you each week in this space just WHY the

Dillon Hinge-Stay Fence

is superior to all others and just WHERE it is superior. We will explain, in detail, what there is about the "Dillon" that merits success, how it brought down the prices of wire fencing in Canada, and ushered in what is called "Standard Quality." We will tell how Hardwaremen everywhere are selling the "Dillon" and why "others" could sell it. We want you to read every ad. because it will be IMPORTANT. We want you to open this paper each week with one thing firmly fixed on your mind—Dillon Hinge-Stay Fence.

Manufacturing and Distributing Industries of the Maritime Provinces

THE interests of the Maritime Provinces are, generally speaking, the same; they have the same advantages and the same drawbacks. Climatic conditions are the same, each city being able to prove that it is free from fog. They were settled about the same time, and the early settlers were largely of one nationality. We would expect, therefore, that they would stand shoulder to shoulder, that here, at least, there would be no room for petty rivalries and jealousies.

While the Provinces have not yet reached that ideal state "where none was for the party but all were for the state," the tendency of the last few years has been towards union. Every citizen should be loyal to the interests of his own city, town, village or Province, but there is a larger patriotism than this, and at times local interest must be sacrificed for the good of the whole country. To take an example; in case the Maritime Provinces were united, would St. John be willing to make Halifax the capital, or would Halifax acquiesce in the capital being located in New Brunswick? There can be no unity of the Provinces, either geographically or in spirit, until each Province and each city is willing to give way at times to its sister Province or city.

In this connection, the Maritime Provinces can take a lesson from the west, and it might be worth while to contrast the eastern and western sections of Canada.

The most noticeable difference to a casual observer is the confidence or indifference manifested by so many business men in the east. There are, of course, many excepeions to this, but it is a fact that this lack of enthusiasm is causing many young men to leave for United States. The young men look on the west or the New England States as a very Utopia. One way to induce the young men to stay in their own Province is for the business men to be more optimistic, to lay more emphasis on the advantages which must accrue to the Maritime Provinces both from their natural resources and from their geographical position.

In population, the east has still the advantage. Nova Scotia has as large a population as Manitoba, British Columbia and Northwest Territories combined. Winnipeg and the west have received more free advertising than any other portion of the world. We have heard so often of the growth of this section of the Dominion that we have come to believe half the population of Canada lies west of the Great Lakes. We have placed the telescope horizontally across Canada, and have looked at the west through the small end, and at the east through the large end. As a matter of fact, the Maritime Provinces have a population of about 800,000. while Manitoba and the west have only 500,000.

There is a great difference, too, in the distributing trade. In the east it is seldom wholesalers have to ship goods farther than two hundred miles, and the bulk of the business is done within a much smaller radius. From both St. John and Halifax a great deal of the shipping is done by boat. In fact, this is so great a factor that wholesalers of Halifax do practically no business with Bay of Fundy ports, while St. John does very little with certain parts of the Nova Scotia coast line. The freight rates by water are very low, and as boats leave for these parts every day, wholesalers are able to give prompt delivery.

The Maritime Provinces have a great advantage in importing goods either from Great Britain, United States or West Indies. Both Halifax and St. John have open ports the year through, and so make a large saving by avoiding a high railroad freight. Moreover, they do not have to order so far ahead or keep such a large stock as do wholesalers in the west.

In the west the yield of wheat acts as a barometer for all lines of trade. In New Brunswick the lumbering business is the magic hand of the barometer. Inactivity in the lumber trade means poor business generally, and if extending over more than one year a number of failures is the inevitable result. This year the lumbering business has been very slow in opening up, and wholesalers, generally, are looking for the silver lining in what seems to be a very dark cloud. In Nova Scotia, fishing and mining are the dominating industries. Twenty or thirty years ago ship chandlery was the big line, not only in Nova Scotia, but also in New Brunswick; but this has generally diminished, although three large wholesale hardware firms in Halifax still devote a good deal of attention to ship chandlery.

A few years ago many wholesale grocery and provision firms handled considerable quantities of ship chandlery. This was probably due to the fact that they sold fishermen canned goods and food supplies and, having established a connection with these men, gradually came to sell sails, pulleys, rope, and the smaller fittings for wooden ships.

The days of the building of wooden ships are past, but there is no reason why at some future date the Maritime Provinces should not occupy the same proud and prominent place in building

The Beautiful City of St. John.

steel ships that they once held in building wooden ships. The Maritime Board of Trade took a very strong stand on this question and will send a delegation to Ottawa to urge the Government to offer some inducement in the way of bounty to induce firms to erect plants for the building of steel ships.

The general store business is an important factor in the Maritime Provinces as it is in the west. For this reason many of the wholesale hardware and metal firms carry a number of lines which would properly belong to the wholesale grocery trade. These general stores in many cases do a large business, some of them carrying over $20,000 stock.

With regard to manufacturing facilities, the Maritime Provinces are much better off than the west. Coal, which is usually one of the largest items of expense, may be had in either of the three Provinces almost direct from the mines. Raw material may be imported by water, thus securing low rates. However, a good deal of the raw material used in manufacturing is found right at home, and is as easily secured as the coal. Labor is cheaper than in the west, and there is no scarcity of skilled workmen in the Maritime Provinces. These advantages should more than make up for the handicap of the freight rates to either Ontario or the West. A few firms, however, are able to compete successfully with Ontario firms for western business, as the railway companies give a very low through rate.

Stoves, furnaces, enamel-ware, axes, nails, wire fencing and other lines are manufactured in the Maritime Provinces and shipped to the west in large quantities.

ST. JOHN.

For the last ten years St. John has carried on an energetic campaign for recognition as the Winter port of Canada. In 1895 the Canadian Parliament decided to subsidize lines of steamships to run between St. John and Liverpool, and to employ the existing service between St. John and London. Since that time the business men of St. John have not been idle and a large portion of the trade which had been carried on through United States ports has been diverted to a Canadian port. St. John has excellent railway connections with the western part of Canada. The Intercolonial Railway has entry into Montreal over its own rails, and connection is made there with the Grand Trunk system. St. John is the Atlantic terminus of the Canadian Pacific Railway, with its main line running direct to the Pacific Coast, and with its numerous branches and connections traversing the whole western and southern portion of the continent.

St. John, however is ambitious, and aims at carrying not only Canadian trade, but United States as well. The distance from Chicago to Liverpool is shorter vis St. John than via New York.

Through rates of freight via St. John are as low as any rival route. This, coupled with the fact that safe carriage and prompt despatch are assured, has attracted considerable trade to St. John in live stock, dressed meats, dairy produce and eggs.

It has been said dressed meats via St. John reach their destination in a more marketable condition than through any other port. This is due to the climatic condition which makes St. John more adaptable for transhipment of perishable goods than the ports farther south.

St. John is ideally situated for a manufacturing and distributing centre. It is not only able to import by water, but has the additional advantage of being able to ship by water to the majority of the retail trade.

In the pages that follow a detailed account is given of the leading wholesalers and manufacturers. In most cases the men at the head of these firms have built the business up themselves, and it is largely owing to their energy and foresight that St. John occupies the proud position she has to-day in the Maritime Provinces.

There are few large buildings in St. John such as are being erected in Winnipeg. The wholesalers in St. John started with a small building and just enough capital to keep their credit good. As their businesses grew they added a wing to the original building or else secured a warehouse nearby. In this way some of the larger firms have warehouses in all parts of the city. Considerable time must be lost by these firms and they must at times be considerably inconvenienced by this arrangement. No doubt in the near future a number of these firms will erect compact buildings. Emerson & Fisher have been the first to move and last year they erected a very fine building; a view of which is shown on another page. The most of the large wholesale grocers in St. John are young men. This is something we would hardly expect to find in a city as old as St. John. These men have been successful in accomplishing what in many cases takes a lifetime to achieve.

St. John is a great tea centre—in fact, the dealers in St. John will tell you it is destined to be the tea centre of Canada. Mr. McLean, manager of the Vim Tea Co., has the distinction of having put up the first "package tea" to be sent out of St. John. At that time, he related, he was employed by F. Hatheway & Co. He told Mr. Hatheway he thought a good trade could be worked up by selling tea in packages. Mr. Hatheway was somewhat skeptical at first, but agreed to give it a trial. Mr. McLean spent a week or so getting his stock ready and then started out to dispose of it. It proved to be a success, and the package tea business soon came to be an important item in the business of F. Hatheway & Co.

Flour is not as yet handled in paper bags in the Maritime Provinces, but is sold by the retail trade in barrels and half barrels. There is no doubt flour in paper bags would be as popular in the east as it is in Ontario and the west. The difficulty, however, is in the shipping. The most of the shipping out of St. John is done by water and the paper bags would not stand the rough usage to which they would be subjected in loading and unloading.

The package system, however, is as popular in the Maritime Provinces as in any part of Canada. This system, whether it be in connection with teas, cereals or flour, has come to stay, and we may expect each year to have articles which are now sold in bulk trade-marked and sold in packages. One wholesale grocer in Halifax made the sweeping statement that if he had money enough he would trade-mark everything he sold, as it would be a guarantee of cleanliness and quality. He did not probably mean this to be taken literally, but wished to express very strongly his approval of package and trade-marked goods.

It would almost seem to a casual observer that St. John had more wholesale houses and commission agents than necessary. For the population it serves it has more than any other city in Canada. Some of them do a small business, however, and one man who has been in business on the wharf for years, intimated quite seriously that he was not anxious to increase his business. He made, he said, about $1,500 per year from his business and he had only one man to look after. Why, then, should he wish to extend his business when he had enough to live on? He had no ambition to be rich, and an increase of business would mean an increase of trouble and worry to him. We mention this little incident as it is typical of a class of business men in the Maritime Provinces. True, only of a small class, for the men who are doing the large share of the trade have to exercise just as much foresight and energy as their conferes in the west. There is, however, in both St. John and Halifax a class of wholesale and commission agents who merely buy when the market is low, but who make no effort to do a steady business the year through. They have a few friends who send in their orders and this is the extent of their business. For it is a fact that friendship counts for more in the Maritime Provinces than it does in the west. A connection in the Maritime Provinces is hard to secure, but once obtained it is just as hard for your competitor to take it away.

Emerson & Fisher, Limited.

Expansion is the order of the day, east as well as west, and while unfortunately population in Eastern Canada progresses very slowly, yet that there is material growth in the Maritime Provinces is evident to those who are conversant with that important section of our Dominion.

Among the hardware trade of the east perhaps there is no name more familiar than that of the subjects of our sketch, Emerson & Fisher, St. John, N.B., whose fine new premises are illustrated herewith.

This firm, consisting of R. B. Emerson and W. S. Fisher, started business in a comparatively small way in 1878, in premises which, with gradual additions, they occupied for a period of 27 years, when, finding that more room was imperative in order to provide for their growing trade, they decided to build. The result is shown in the building illustrated, which is said to be the largest and finest in the Maritime Provinces devoted to the hardware business.

For some time the formation of a stock company had been under consideration, and with the entrance of the firm into the new building this was consummated, and Emerson & Fisher, Limited, took the place of the old firm, with Fred. R. Murray and Stanley L. Emerson additional partners.

As will be readily seen from the cut, the building is a most commanding one, standing six storeys in front and seven in the rear. The position on Germain street, a few doors from King, and right in the heart of the city, is ideal. It has a frontage of 60 feet by 100 feet in depth, with a driveway leading to a large yard in rear, where are situated the stables of the firm as well as additional warehouse space.

Enterprise Foundry Co.

Manufacturers **Sackville, N.B.**

the interior of this establishment is beyond the writer, but he has the assurance of the firm that a cordial welcome awaits all who are sufficiently interested, when visiting St. John, to favor them with a call.

Emerson & Fisher report business very good, specially since removal to new premises, where they are much better able to handle it quickly and well, and with better results to both customers and themselves.

They represent a number of leading manufacturers, and with their connections, which completely cover every point in the Maritime Provinces, are in an excellent position to do justice to any line they take up.

Emerson & Fisher, St. John, N.B.

In addition to their jobbing lines they are interested in the Enterprise Foundry Co., Sackville, whose stoves are well known all over Eastern Canada. They also manufacture the celebrated brand of old-time heavy pieced tinware, and other sheet metal goods.

Portland Rolling Mills Co., Limited.

The history of this firm dates back to the year 1826, when James Harris & Co. erected a small plant for the manufacture of nail plates and ship knees. A little later bar iron and car axles were added, and a mill was put in for the purpose of making all sizes of bar iron.

About 13 years ago the Portland Rolling Mills Co., Limited, was formed, amalgamating James Harris & Co. and S. R. Foster & Sons, of St. John. A short time after this they commenced manufacturing railway spikes and horseshoes. Their business in bar iron increased rapidly, and they had to install another mill to supply the demand. About the same time they erected a large building for increasing their output in horseshoes and bolts.

At the present time they are manufacturing bar iron of all kinds, car axles, fish plates, angle bars, ship knees, and forgings of all kinds; horseshoes, railway spikes, ship spikes, mine spikes, nails, tacks, and bolts of all kinds.

Their "Monarch" brand horseshoes are sold in all parts of Canada and in the West Indies and Newfoundland.

They have five buildings in all, and four travelers look after their interests on the road. They employ in all about 250 men. The officers of the company are Wm. Bruckhof, manager; James Manchester, president; D. T. Purdy, vice-president; A. P. McIntyre, secretary.

The S. Hayward Co.

This firm commenced business in 1870 under the name of Warwick, Clark & Co. Mr. Weldon, the present manager, entered the employ of the firm one year after its organization. Mr. Warwick died in 1873, and the firm then became Clark & Hayward. Three years later Mr. Clark retired and the name was again changed to S. Hayward Co. Mr. Hayward died a few months ago.

The firm are exclusive wholesale dealers, in all probability the only wholesale hardware firm in the Maritime Provinces which has no retail department.

T. S. Sims & Co.

This firm commenced business in the year 1872 under the name of Murphy, Sims & Co. Two years later the name was changed to T. S. Sims & Co.

In 1902 they erected their new building, and installed a considerable amount of new machinery. They have now one of the most up-to-date and modern manufacturing plants in the Maritime Provinces.

Probably the one article of which Mr. Sims is most proud is the solid scrubbing brush. Mr. Sims got the idea from Germany, and intimated to the writer that they had been a great success in Canada.

They have three travelers, T. F. Anderson, St. John; Geo. West, Toronto, and T. S. Baker, St. John. They also have a representative in Port of Spain, Trinidad, Mr. T. Geddes Grant.

Walter Wilson & Sons.

This firm was established in 1845 by Mr. A. Richardson. Mr. Walter Wilson entered the business about 1864, and on the death of Mr. Richardson in 1877 became sole owner.

Mr. A. R. Wilson now carries on the business and manufactures a full line of saws, including circular, gang and crosscut saws. Mr. Wilson has been in the saw business all his life and understands it thoroughly. The firm have always been noted for the very high grade of goods which they manufacture. They use only the high-grade Sheffield steel, and guarantee all the goods they manufacture.

Estey & Co.

This firm was established in 1863, and for thirty-eight years were located on Prince William street. They moved a short time ago to their present premises at 49 Dock street.

They carry a full line of mill, foundry and steamboat supplies and import direct from all mercantile centres. These lines include steel in all forms, such as girders, channels, angles and plates for bridges, boilers, etc.; also iron pipe, sheet metal and in railway supplies, carwheels and axles, steel tires for steam and street railroads.

They are now making a specialty of nipple steel shafts for railroad use, and are prepared to quote for delivery to all parts of Canada. In foundry iron, they sell special southern brands, which are in demand by stove foundries for making special castings.

They also handle forgings of all kinds for mills and railways, and their rubber department includes everything for manufacturing and domestic purposes.

Kerr & Robertson.

About thirteen years ago this firm opened up a wholesale and retail hardware business in St. John. They carry a full line of shelf and heavy hardware, and make a specialty of cutlery and fittings for schooners. They keep three travelers on the road to look after their

W. H. THORNE & CO., LIMITED.

Market Square, - - ST. JOHN, N.B.

business in Nova Scotia and New Brunswick.

Mr. Kerr was formerly of the firm of Clark, Kerr & Thorne, which was established some thirty-five years ago. Mr. Robertson has also had considerable experience in the hardware line, being a traveler for the same house.

This firm has grown from year to year and now occupies a four-storey building, 41-47 Prince William street.

Maritime Nail Co., Limited.

This company, originally organized in 1904 for the manufacture of wire, wire nails and horse nails, has been steadily developing until to-day its products are distributed in all parts of the Dominion, and particularly marked has been the growth of the horse nail department which, starting in a very small way, occupies to-day a foremost position in the trade.

The company are operating under patents granted to Mr. Eben Perkins, who

Kerr & Robertson, Wholesale Hardware Merchants, St. John, N.B.

is general manager, and both the machinery and process are entirely different from any other in Canada, producing as they do a nail which is hammered cold, and which they claim is superior to hot forged brands. The value of the cold process is easily apparent to any one who has been accustomed to working "Swedish Steel," from which material all horse nails are now manufactured, for in working this hot the original tensile strength of the material is considerably reduced, whereas cold working increases it, so that relative results are 25 to 30 per cent. in favor of the cold made nails, and as the holding qualities of a nail depend almost entirely on the tensile strength of the material, any cold forged nail possesses a very marked advantage over those made by the hot process.

The growth and development of the horse nail business in the United States, where the last few years has seen the rapid displacement of hot forged nails by those produced by some cold process, has demonstrated, as far as supply and demand goes, the superiority of cold forged nails, and the further fact that those pioneer manufacturers and former strongest advocates of hot forged nails —the Putnam Nail Co. of Mass., and the Northwestern Horse Nail Co. of Chicago—have both adopted the cold process and are now as strongly advocating the advantages of cold forged nails, show the rapid displacement of an inferior for a superior article. The trade now demand a cold forged nail.

Three years ago this company inaugurated the premium system as applied to the sale of horse nails, coupons being placed in each five-pound box of "Peerless" horse nails, entitling the users to a selection of high-grade farrier's tools. This also has been instrumental in building up a trade which to-day taxes to the utmost the large factory of the company. As results in the United States may be considered a criterion of what may be expected in Canada, the outlook for this, the only cold forged nail now manufactured, is certainly promising, and the company looks forward to even larger premises and business in the near future.

Another line of manufacture lately added is that of wood screws, to make which the company has installed a new and modern plant, and as this is the only plant of this kind in the Maritime Provinces a ready market for the product is assured.

The factory, which has been entirely rebuilt since the fire of March, 1904, is situated directly on the harbor front, being served thus both by water shipments and rail, the C.P.R. track running on one side of the property. Both the plant and business are, therefore, so situated as to assure steady and prosperous growth.

McLean, Holt & Co., St. John. N.B.

About twenty-eight years ago this firm began business in St. John. At that time they manufactured railway, mine and mill castings. The railway business was then in its infancy. It was a "healthy baby" and has now reached such proportions that there are foundries in all parts of Canada kept busy supplying its ever increasing wants. McLean, Holt & Co. are now doing business with almost every railroad in Canada.

The proprietor, Mr. J. L. McAvity, is a son of Mr. Jas. H. McAvity, the senior member of T. McAvity & Sons, of St. John, N.B. For a number of years he represented this firm in Western Canada. The name McAvity is a name to conjure with in New Brunswick, and there is probably no family in St. John who have done more for the business interests of that city.

Increased business has made a new building imperative, and already plans have been drawn up. Men have been excavating and filling in for the past three months. The new plant will take up an entire block on Albion street, beween Hanover and Brunswick streets. Seven years ago the firm employed 18 men; to-day they have 55. Their present plant is situated 113-119 City Road, and 30 Stanley street. They have also a retail store at 155 Union street.

Glenwood Ranges.

The principal line sold at this store is the Glenwood range. A few of the outstanding features of the Glenwood are: Balanced baking damper which never warps or sticks; perfect working grates with four patterns which are interchangeable, large roomy oven, handy door handles, patent pedal opener, removable oven bottom and a dozen other things we have not space to mention. One unique point, however, is the nickel trimmings which are not bolted, but held by a patent spring latch, which one finger will unsnap when they are to be taken off.

About four years ago this Glenwood range was added to the lines manufactured by this firm and it has "made good." In speaking to the traveling representative, Mr. F. B. Whipple, the remark was made, "Is it not hard to introduce a new stove on a market that already seems to be overcrowded?" the answer was, "There is no trouble selling the Glenwood."

Jas. Pender & Co.

This firm was established in 1877, and for a number of years carried on business under the name of the St. John Horse Nail Works. Horse nails was their only line, and they had only one machine to manufacture these. In 1892 they commenced the manufacture of wire nails, and about seven years ago added another line—toe calks. They sell in all parts of Canada, but the bulk of their business is in the Maritime Provinces.

Josiah Fowler & Co., Limited.

This business was originally carried on under the name of Campbell & Fowler, these two men commencing business

about 1865. About 20 years later the partnership was dissolved and Mr. Campbell started in business for himself. Mr. Fowler is still in charge of the business, and only last year made a trip to the Pacific Coast. Their axes are known and sold all over Canada. While the firm is probably best known as manufacturers of axes, they make in addition railway springs, both spiral and elliptical, chisels and heavy hammers.

Carritte-Patterson Mfg. Co.

are manufacturers of Kant-Tair 3-ply ready roofing. This roofing was first introduced in 1864. Building public received it with favor and from that date it has been a standard article, supplying the demand for a durable and easily applied roofing of reliable quality.

There are many brands of roofing manufactured similar to that of the C. P. Manufacturing Co.'s brand, but it can always be distinguished by the patent wire edge on which they lay special emphasis.

Among the good points claimed by this roofing are: It is adapted to any kind of a roof; it is not affected by gas or acids and cannot rust or corrode. The insurance companies recognize that it will resist fire as well as tin, slate or metal roofing, and it is insured at the same rate. It is easily applied and costs less than many other styles of roofing.

Carritte-Patterson Mfg. Co. had a large warehouse in Halifax, which, however, was burned down a few weeks ago. The firm have been making a great effort to supply the demand for their roofing without inconveniencing their customers.

W. H. Thorne & Co., St. John, N.B.

W. H. Thorne & Co.

The wholesale and retail hardware, iron and metal business now conducted by W. H. Thorne & Co., Limited, was founded by the present president of the company, Mr. W. H. Thorne, in 1867, and has continued thus in existence upwards of 38 years.

Commencing business at the corner of Dock street and Market square, the business originally conducted by Mr. Thorne rapidly grew. In 1875 the late Richard C. Scovil, formerly residing in Shediac and conducting a large lumber business there, entered into partnership with him. The retail and wholesale business was separated, and until the fire in 1877, the wholesale was conducted in Canterbury street in buildings on the site at present occupied by the S. Hayward Co. and built especially for their wholesale business, Mr. T. C. Lee taking charge of the retail business in the original stand, the corner of Market square and Dock street.

In 1877, when the great conflagration took place in St. John, both their stores were, unfortunately, destroyed by fire. Within ten days after the fire, having received a permit from the mayor of St. John, a large two-storey wooden structure for temporary purposes was erected on the Market square, which they occupied for upwards of a year, when they moved to their new premises, built especially for their large and increasing business, fronting on the Market square. Afterwards they acquired the adjoining property known as the McCullough Building and next adjoining their Market square building.

In 1884, Mr. Scovil, in consequence of ill health, retired from the business and in 1885 Mr. T. C. Lee and Mr. A. T. Thorne were admitted to partnership.

In 1895 a joint stock company was formed under the New Brunswick Act, and the business of W. H. Thorne & Co. was taken over by the new company, Mr. Thorne being president with other members of the late firm as directors. The business of the company is now the largest in the hardware trade in the Maritime Provinces.

As occasion demanded, new lines of goods have been added to their large and varied stock and the business is conducted, as far as possible, in different departments. There is shelf and heavy hardware; plate, window glass, paints and oils; mill supplies, belting, oils, etc.; fishing supplies, nets, cordage, etc.; guns, rifles, canoes, salmon and trout flies, baseball goods, and a fully-equipped sporting department, besides silverware, cutlery and fancy goods. In heavy goods they deal in iron, tin plates, cements, steel, nails; also a heavy line of woodenware.

Six commercial travelers are employed, covering New Brunswick, Nova Scotia and a portion of Quebec.

The buildings now occupied by them on Market square, where their wholesale and retail business in shelf goods is carried on, comprise 35,604 feet of floor space, while the warehouses on their wharves for heavy goods cover a floor space of 32,800 feet, besides the saw factory, which they control and in which are manufactured saws, fencing and "Eureka" fly killer, covers a floor space of 12,245 feet, a total of 80,649 feet of floor space.

Canadian Oil Co., Limited.

In March, 1904, this firm bought out the Sun Oil Co., and put in a complete stock of their "Sterling" paints and varnishes, lubricating oils, and their well-known Pennoline. They have large warehouses in St. John and Halifax, and in this way are able to fill orders in Maritime Provinces on short notice. Mr. R. M. Currie is the manager of this branch, and is strongly supported by five travelers: Mr. Neil Macdonald, Halifax; Mr. E. F. Weaver, city agent, Halifax; Mr. W. D. Gillies, southern part of New Brunswick; Mr. F. G. O'Reilly, south shore of Nova Scotia; Mr. H. T. Currie, north shore of New Brunswick.

The Jas. Robertson Co.

In addition to their complete lines of plumbers' supplies, the Jas. Robertson Co. handle metals, tinsmiths' and engineers' supplies, galvanized iron, black sheet iron, zinc, spelter, antimony, copper, tin sheets, ingot tin, etc.

They manufacture lead pipe and brass goods, and Mr. Keefe, the manager, stated they had better facilities for manufacturing lead pipe than any other firm in Canada.

They have secured the agency for the Naturo closet, which is being so extensively advertised in the leading magazines. All our readers will be familiar with the advantages of the Naturo closet through the regular page and half-page advertisements they have been running from week to week in Hardware and Metal. The Naturo closet bowl differs from the ordinary closet in that instead of the high horizontal seat so long in use it has a low seat sloping from front to rear, which makes a proper position at stool compulsory, yet far more comfortable than is possible

with the ordinary seat, and provides the only physiologically correct position possible.

The Jas. Robertson Co. was founded nearly fifty years ago. Mr. John Keefe, the manager at St. John, has been with the firm since 1883.

During the last year this firm published a plumbers' supplies catalogue, which is one of the most complete and elaborate catalogues ever issued either in Canada or the United States.

McClary Mfg. Co.

In 1901 this firm opened up a branch office and warehouse in St. John, with Mr. J. J. Foot in charge. Through Mr. Foot's efforts, or owing to the high quality of their goods, or possibly to a happy combination of both, the business has grown wonderfully. During the last year their business was just eight times as large as it was when the branch was opened. Although their goods are sold in nearly every hardware store, they deal directly with only the jobbers and large dealers.

Their building is located near the jobbing centre of St. John. It consists of five storeys and a basement, containing in all about 24,000 square feet of floor space. They have in addition to this a large railway warehouse.

The McClary Manufacturing Co., St. John, N.B.

They employ a staff of 27 to look after the work in the territory formerly covered by one traveler.

By carrying a stock of stoves and furnaces, metals, tinners' trimmings, kitchen furnishings, etc., they are able to fill orders very quickly.

Campbell Bros.

Two years ago Campbell Bros. of St. John, N.B., introduced to the trade their now celebrated XXX chopper. The price was much higher than the ordinary axe they had been selling, but they believed lumbermen would willingly pay a higher price for an axe so carefully forged and tempered that it would hold its edge in the frostiest weather.

Enthusiasm is contagious, and for this reason Mr. Campbell should prove an excellent salesman. It was a pleasure to see him take down one of his axes, handling it with as much pride as a sculptor might handle his masterpiece.

CAMPBELL BROS.

CELEBRATED

XXX CHOPPERS

Single Bitt

$1.00

EACH

The price of XXX CHOPPERS is high, but it will pay you in the end to use them, as they will hold a keen cutting edge and stand in frosty weather, which cheaper axes fail to do.

Double Bitt

$1.50

EACH

We would advise you to order now as our output on this brand is limited and we have on order now two-thirds of all last year's sales. (In most cases repeat orders.) Price is no object when quality is considered. We guarantee our XXX CHOPPER to be the neatest and best axe on market.

Made from the very highest grade of Cast Steel and Charcoal Tempered. Guaranteed of extra quality. Try it!

Try XXX Choppers and you will always use them

Sold by all the Maritime Wholesale Hardware Firms, whose travellers will call on you with samples.

To him it was more than a mere axe, for it was the best obtainable result of years of close attention to the study of axe making.

The business of this firm was established by the late William Campbell in 1880, and he was succeeded by his sons in 1890. They manufacture axes and other edge tools, including ship carpenters' axes and adzes, bench, boys', and hunters' axes; hatchets, including claw and lathing, carpenters' slices, etc.; and carriage springs and axles.

Of their ship carpenters' axes and adzes, over two-thirds of the output is exported to the States, to over a dozen different places, in face of American competition and a 45 per cent. duty. Their goods are higher priced in the first place than American, and pay the duty besides. The difference in quality explains the demand for their goods in the face of these handicaps.

Speaking of their celebrated XXX chopper, which is much higher priced than the ordinary axes, Mr. G. Wilford Campbell said that two years ago when

Charles R. Campbell, St. John, N.B.

they placed it on the market he went to a leading wholesaler and unfolded his plan, stating the price at which they could sell the axe. The wholesaler expressed the opinion that an axe at that price would not sell. Mr. Campbell was not discouraged. He figured out that they ought to sell a certain number of dozens of XXX choppers the first year, and the samples went out in the hands of the travelers for wholesale houses. At the end of the year he found they had sold almost eight times the number he had figured on. The explanation, in view of the difficulty in introducing a new axe, was that the quality proved so satisfactory that repeat orders were received. This year the sales already show a large increase over last year. Out of all they have sold only 48 were returned, and only eight of these were really bad axes.

The firm sell to the wholesale trade, and the XXX chopper goes wherever the travelers of Maritime wholesale hardware houses go.

"We make this brand of axe," said Mr. Campbell, "for choppers who require a tool they can rely on to hold an edge in frosty weather when ordinary axes fail. Every axe is carefully forged and tempered, ground thin and true and highly finished. We make all patterns in single and double bitt, and all are inspected and guaranteed. This axe is the best obtainable result of years of close study and practical experience. We set out with the theory that price would not interfere with the sale of an article that possessed the quality and was kept up to the standard."

We take pleasure in presenting to our readers portraits of Messrs. G. Wilfred Campbell and Chas. R. Campbell.

New Brunswick Wire Fence Co., Moncton, N.B.

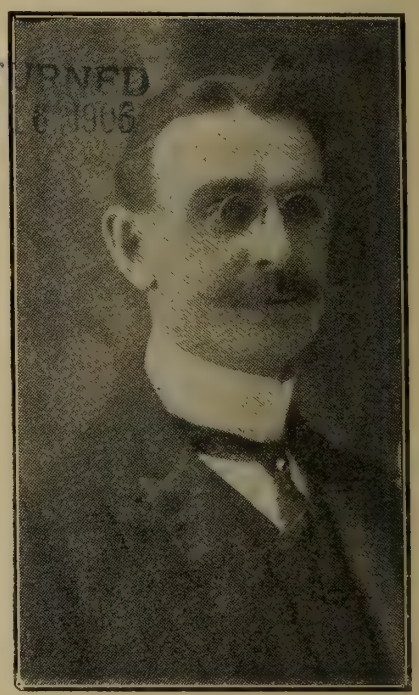
This firm was established in 1899 for the purpose of manufacturing wire fencing. At first they turned out a hand-made field fence.

Keeping abreast of the times, they installed in 1903 a wire coiling plant, also machines for manufacturing staples. They now make everything complete, and even supply either wooden or iron posts. In many cases a farmer or lumberman merely gives them the order for a certain number of rods of fencing and they erect the fence, attending to all details from the digging of the post holes to the painting of the posts, when such a luxury is desired.

Wire fences may appear to be all the same, but there is a good deal of difference in their staying powers. Owing to the proximity of Nova Scotia and New Brunswick to the ocean, ordinary galvanized wire has a tendency to rust after the first or second season. Mr. Chapman, the manager of the New Brunswick Wire Fence Co., explained that for this reason they had the wire they use specially galvanized. They use a high carbon wire which costs $5 per ton additional.

This company specially recommends a fence of a uniform gauge of wire, No. 9 being used in the lock, horizontal and upright.

Ornamental fences are also manufactured by this firm. No wood work is used in these fences. Steel posts, steel wire and steel clamps are used. The posts are set in stone and in this way a fence is made not for a year, but for a life time.



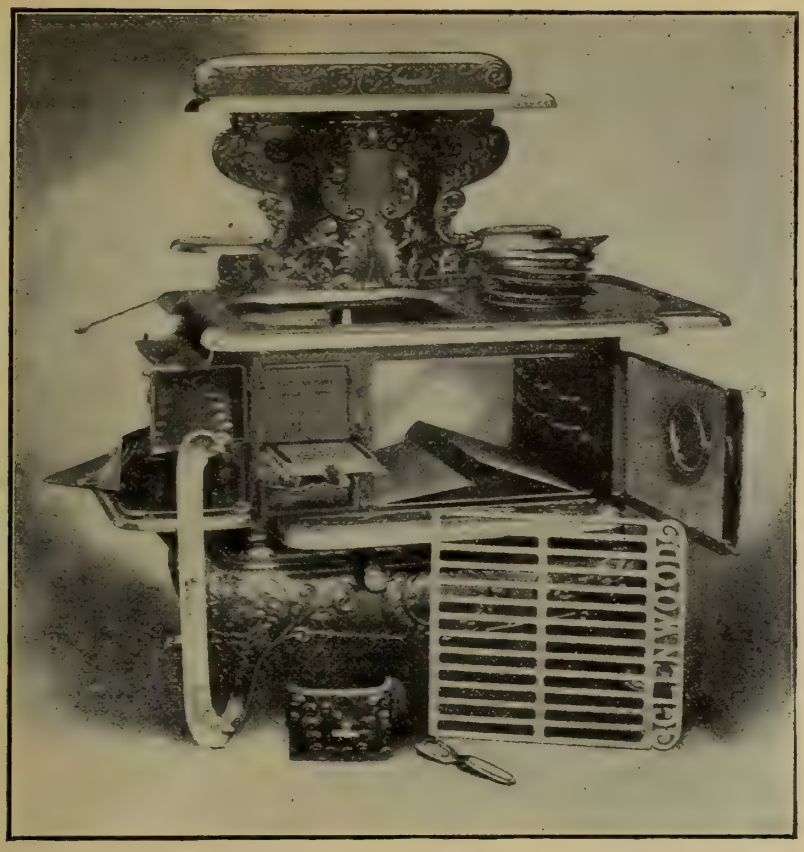
Record Foundry and Machine Co,, Moncton N.B.

This firm was established by the late C. B. Record. In 1853 it went under the name of Record & Scales. Mr. Scales, however, died in 1854, and Mr. Record carried on the business till 1882, when he sold the property and retired. On January 7, 1882, the Record Foundry and Machine Co. was organized, the directors being C. B. Record, A. E. Peters, H. T. Stevens, Joshua Peters, G. F. Atkinson. It would be useless to dwell on the success with which the firm have met. Their stoves are sold in every Province of Canada. In addition to their Moncton plant they have an extensive works at Montreal. They have 100 moulding floors in each place and employ about 400 men in each.

A unique feature about this firm is that most of the men are employed on the "piecework" system. In this way each man becomes a specialist and attains great skill in making some part of the stove. This system also enables workmen to obtain a wage commensurate with their skill and speed. The present board of directors are: Thos. Fish, Esq., Montreal; Hon. H. R. Emmerson, Dorchester; Joshua Peters, Moncton; Senator Josiah Wood, Sackville; A. E. Peters, Moncton; H. C. W. Robinson, Moncton; O. J. Peters, Moncton.

Amherst Foundry Co.

During the year 1904 the Maritime Provinces made considerable industrial advancement as a whole, but in no other part was this as noticeable as in the town of Amherst, where the Amherst Foundry Co., Limited, put in operation the second plant in Canada for the manufacture of cast iron porcelain enamelled



G. Wilfred Campbell, St. John, N.B.

baths, lavatories, sinks and other goods used in the plumbing trade.

The commencement of operations in the new department was a fitting climax to the formidable list of successes which have attended the operations of this company since the inception of its business some years ago.

In 1890, Messrs. J. A. Crossman and J. A. Lanes started in a small way to manufacture stoves, hot-air furnaces and sinks. At the same time Messrs. William Knight and J. Avard Black were carrying on a retail business in stoves, furnaces and tinware.

On January 1, 1895, the four above-named gentlemen, together with Mr. C. A. Lusby, entered into a partnership under the name of the Amherst Foundry and Heating Co., for the purpose of carrying on the amalgamated business of Crossman & Lanes and Knight & Black. They threw all their energy and business

ability into the business with the result that it continued to gain in volume, while the stoves, ranges and hot-air furnaces of their manufacture rapidly increased in popularity throughout the Maritime Provinces.

The old premises soon became too small to accommodate the increasing business, and it was decided to acquire other property and to erect more suitable buildings. Consequently a valuable and convenient site was acquired on Station street and the work of erecting more commodious workshops and offices was commenced.

The warerooms, offices and fitting shops were first constructed and then the moulding shop and enamelling building. These buildings are all of brick and stone and probably a more substantial, better lighted or better arranged foundry plant in every particular does not exist in Canada. The works are connected by a siding with the Intercolonial Railway and every facility exists for shipping goods and unloading the raw material. These thoroughly equipped works mark the crowning effort of the men who have been responsible for the upbuilding and successful guidance of the undertakings which have now become an important factor in the industrial life of Eastern Canada.

ETURNED
CT 4 1905

Eastern Beauty Lavatory made by Amhert Foundry Company.

About two years ago the members of the firm, together with Mr. C. C. Black, formed a joint stock company and became incorporated under the name of the Amherst Foundry Co., Limited. This firm manufactures an extensive line of stoves, ranges and hot-air furnaces, together with porcelain enamelled baths, lavatories, sinks, etc. All of these goods have a splendid reputation, but we might particularly mention the "Improved Cumberland" hot-air furnaces for wood, coal or wood and coal combined, which are known and spoken of throughout the country.

The enamelled goods, which are the latest production of this enterprising firm, are known as the "Beaver" brand, and their splendid appearance and excellent qualities are testified to by the great demand there is for them all over the Dominion of Canada. From Halifax to Vancouver they are being shipped in carload lots as fast as the factory can turn them out, although the enamelling furnaces are kept running night and day.

One specialty of the enamelling department is the "Eastern Beauty" lavatory, a cut of which is shown herewith. This lavatory has a heavy roll apron, high back, is made all in one piece, and is fast becoming a general favorite.

The Amherst Foundry Co., Limited, situated as it is in the wide awake and enterprising town of Amherst and under the skilled guidance of the men who conduct its affairs, will meet with the same success in the future which diligence and merit have won for it in the past and will continue to grow and flourish.

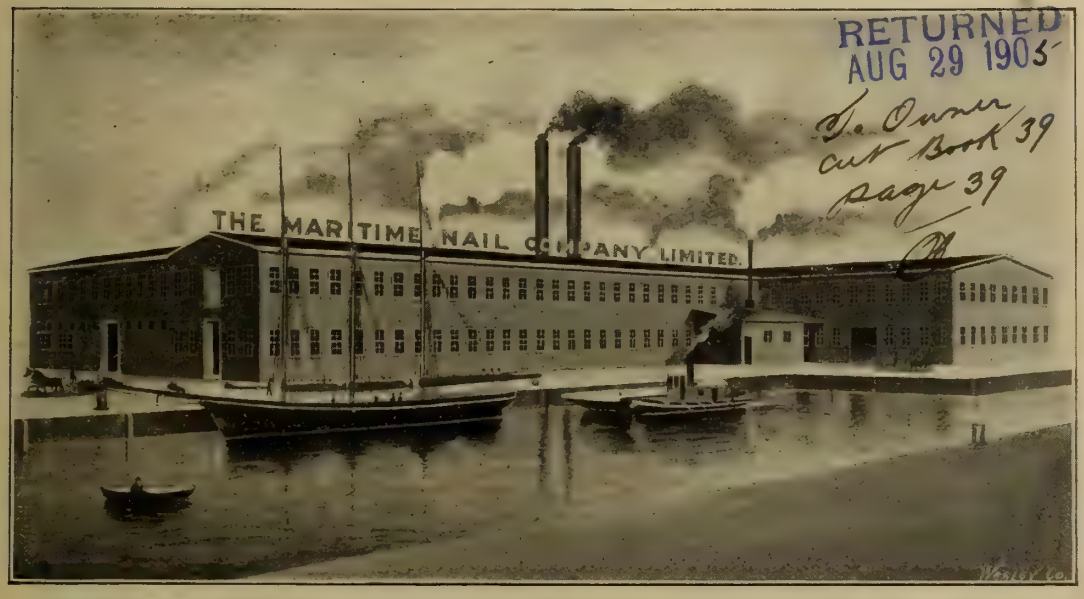
HALIFAX, N.S.

The wholesale business of Halifax is largely confined to Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland. Some firms have extensive business connections in the West Indies and Bermuda. Trade with the West Indies has shown special progress during the last few years. The exports from Halifa and St. John show a large increase in agricultural products and manufactured goods. Canadian flour is growing more and more in favor with the West Indies, as well as other lines of mill products. Boots and shoes, corn brooms, box material, paper, paints and cordage are finding their way to the southern markets, and in return Canada is taking largely increased quantities of sugar, cocoanuts, cocoa, coffee, pimento, hides, etc.

All Canada is proud of Halifax harbor. Here the water is so deep that the largest vessel can come in close to shore, and the harbor is large enough to float the whole of the British fleet of warships. It would be hard to overestimate the commercial favor of such a harbor to any nation. Up to the present time the advantages have been purely commercial, but the time may come when the life and independence of the whole nation will depend on the fortification of Halifax.

The supremacy of England and Germany as the leading manufacturing countries of Europe has resulted in the possession of their extensive coal fields, and of a navy powerful enough to protect the interests of their trade vessels. The New England States still hold supremacy in manufacturing and distributing trade of the United States. We may therefore expect Halifax to be one of the best distributing points in Canada for sea-borne commerce.

Tendency for the last few years has been for many manufacturers either to sell direct to the retailer instead of through the jobber, or put their own trademark on the goods they manufacture. The argument is that the manufacturer must first interest the retailer in his goods before the jobber will handle them, and that when he has gone to the expense of making the goods known to the retailer he might as well have the profit instead of dividing it up with a middleman. There is much to be said for and against this argument, but the jobber must always be the medium through which imported goods are to be distributed. The manufacturer in Canada has his whole organization to look after his Canadian business. Moreover, he is familiar with the needs of the country and the idiosyncracies of the people to whom he must sell. The foreign manufacturers, on the other hand, must depend on some firm to look after their interests, aad the jobber, with his wide and extensive connections among the retail trade, is the one man available. Halifax, therefore, with its excellent harbor and its wide steamship connection, has the very best facilities for imported goods. It is for this reason we see more foreign goods in the wholesale warehouses in Halifax than in any other city in Canada.



Many years ago ship chandlery was the line to which not only wholesale hardware but provision firms as well devoted most of their attention. Wooden ships built and rigged up in the Maritime Provinces were to be found all over the world. It is interesting to note how some of the firms, as the ship chandlery line decreased gradually, worked in other lines. The firm of Wm. Stairs, Son & Morrow have been established over one hundred years and have a number of pictures in their office of large vessels for which

they supplied all the necessary riggings, fittings, etc. As this line of their business has gradually decreased they have added such lines as plumbers' supplies, and at the present time keep two travelers on the road for this department alone.

Halifax has many advantages to offer manufacturers. There are from twelve to fifteen miles of waterfront yet not used, and suitable sites for manufacturing plants can be procured at very reasonable prices. The rate of taxation in Halifax is very low and the manufacturer improving his plant to the extent of say $30,000 or $40,000, will not be taxed one cent for the improved value. Halifax has excellent railroad and steamship connections. It is served by four different lines of railway, Intercolonial, Dominion Atlantic, Canadian Pacific and the Southern Railroad, which has just recently been built. Another line is to be built shortly to run along the eastern coast. There are also three large steamship lines plying between Halifax and distant points. The Allan line to Liverpool and Glasgow, Pickford & Black steamers for Bermuda and the West Indies, and the Plant line to Boston and New York. There is also a monthly steamship service direct to Havre, France.

Below we give short accounts of a number of the leading wholesale and manufacturing industries located in Halifax.

Wm. Stairs, Son & Morrow.

This is probably the oldest firm in Halifax, business being established over one hundred years ago. The firm was originally established by Kitson, of Glasgow, the great iron merchant, and was purchased from him by Mr. Wm. Stairs. It was at first merely a country store handling all lines.

About 1854, Mr. Morrow joined the firm. At that time ship chandlery was the chief line. As the country has developed they have come to handle a more varied line of goods, and in addition to their large general hardware business, they are to-day one of the largest jobbers of plumbers' supplies east of Montreal.

In 1893, about three years after they moved to Water street, they had a very disastrous fire, but rebuilt immediately. Their present building is 175 feet by 350 feet, consisting of four storeys and cellar. On the first floor are located the general offices and retail department; also in the rear the metals, iron, stoves and pulleys. On the second floor ship chandlery, galvanized sheets and steel;

Wm. Stairs, Son & Morrow, Halifax.

and on the third floor general hardware and plumbing supplies. They have a separate room for enamelled-ware, sinks, bath tubs, etc., also a separate packing room. Lighter goods are all kept on the top floor while paints, chains and heavy shipping goods are in the cellar.

The firm represent Imperial Duck Co., Hamilton; Muntz Metal Co., Birmingham; Gundry & Co., fish nets and lines, Bridgeport, England. Their interests on the road are looked after by five travelers, two of whom call only on the plumbers.

The accompanying cut shows a view of the front of their warehouse. This gives a very inadequate idea of the size of their building, which extends 350 feet to the rear.

Geo. E. Smith & Co.

This firm was established by Mr. Geo. E. Smith as a wholesale hardware business about thirty years ago. The original name of the firm was Irish & Smith. Mr. Irish retired after a short time and the business has gone on under the name of Geo. E. Smith & Co.

About eight years ago the firm moved from Water street aad bought the building they now occupy from P. Walsh Hardware Co. They carry a full line of shelf and heavy hardware, also a complete line of carriage stock and carriage furnishings. They are agents for Noble & Hoare's, varnish manufacturers, London, Eng.; Neverslip Mfg. Co., manufacturers of Neverslip horseshoes and horseshoe rubber pads, New Brunswick, N.J. They also make a specialty of Burrill's English white lead and ready mixed paints, and Masury's and Valentine's C.P. coach colors.

The firm was visited by fire a short time ago and their stock was damaged to the extent of $15,000. They are now in a position, however, to fill all orders. We show a cut of their present building fronting on Cheapside and Bedford Row. They have one of the most valuable sites in Halifax being bounded on the north by the Post Office, on the east by Customs House, and west by the Provincial Buildings. They keep three travelers to look after their business on the road.

The firm is now composed of Mr. Geo. E. Smith and Mr. A. W. Smith.

A. M. Bell & Co.

This firm commenced business April 1, 1875, as a wholesale and retail hardware firm. They started in a very small way, and for some years the bulk of the business was done through the retail department. They were first located on Water street, and remained there for ten years, when they moved to Upper Water street, at the head of Furness wharf, where they remained till the Spring of 1904. In April, 1904, they moved into a new building which they had erected on Granville street, and which is in many ways a model hardware store, although Mr. Bell claims that if he were building

again he could make many improvements. The building is solid concrete running from Granville to Hollis streets, with a frontage of 40 feet on each street, and having in all about 30,000 square feet of floor space. An electric elevator

Geo. E. Smith & Co.'s Hardware Store.

onnects the various floors, and as teams an back in from the Hollis street entrance a great deal of labor is saved and o loading need be done outside. The ain entrance is probably perfect from n architectural point of view, but ould be much more attractive and rominent if the windows were set out little more and if the corners were ounded off instead of being square. The rontage, too, is rather narrow for the eight of the building, although mirors at the sides tend to make the buildng look larger.

The building is well lighted, which is ue to the fact that they have frontage nd windows on both Granville and ollis streets, and also to the prismatic lass, of which they have a great many quare feet.

Among the side lines carried by this rm are canoes, incubators and chicken eed, oiled clothing and Fairbanks cales.

The two men who have been most intrumental in building up this business re Mr. A. M. Bell and Mr. A. B. Wisell. Mr. Wiswell entered the firm's mploy as bookkeeper in 1879, and was aken into partnership in 1896.

Wm. Robertson & Son, 205 Lower Water Street.

This is one of the oldest firms in the holesale hardware business in Halifax. hey commenced business at the head of ommercial Wharf, and came to their resent site about twenty-five years ago. In addition to their full line of general ardware they specialize ship chandlery, shing and mining supplies. Their travers are: J. B. Wier, J. L. Crowell nd C. J. McKie.

The firm consists of Mr. Wm. Robertson and Mr. W. G. Robertson. Mr. Wm. Robertson is president of the Union ank.

Crowell Bros.

This firm was established in 1892 by Mr. M. O. Crowell, the senior partner of the firm, business from its inception showing a healthy growth. In 1897 the firm name was changed to Crowell Bros., Mr. L. H. Crowell entering the firm.

They give every attention to general hardware trade and have made a specialty of certain lines of vessel and steamship outfittings. They have the agency for such specialties as Mariner Dick's engine oils and composition paints. They have also the agency for the New Jersey and Sherwin-Williams copper and house paints. They cater to ship building trade, which has also been an important industry in Nova Scotia, and carry a heavy stock of bolt iron, rigging, sails, etc.

Their wholesale trade is looked after on the road by Mr. Harry Hill and Geo. S. Whiston, both of whom have been with the firm almost since its inception.

Before starting business on his own account, Mr. M. O. Crowell had eleven years' experience with another hardware house running on similar lines, and his brother, Mr. H. Crowell, had about the same length of time with Pickford & Black.

H. H. Fuller & Co.

The year 1905 marks the completion of fifty years' business life of the firm of H. H. Fuller & Co., dealers in general hardware and mining supplies.

The firm of H. H. Fuller & Co. was founded in 1855 by the late Hon. H. H. Fuller and since that date there have been several changes in its personnel, beginning with the demise of the founder, and subsequent death of other associates. Mr. Sterns, who is now the senior partner, has been identified with the business for many years, while Mr. Lawrence was admitted less than a year ago.

Hardware and hardware men usually considered practical, sometimes run into the picturesque, as will be noted by the reproduction of a Halifax pictorial postal card. The establishment of our friends, Cragg Bros. & Co., will be noted on the picture, corner Barrington and George streets.

Cragg Bros. & Co.,

Have been in business in Halifax for some seventeen years, the firm now being controlled by Mr. Frank J. Cragg, the sole surviving partner of the original firm. They devote their attention particularly to cutlery, higher grades of imported kitchenware and sporting goods. Besides these lines they carry a full assortment of builders' hardware, and, taking a lesson from some of their western confreres, pay particular attention to specialties and the ordering of goods from catalogues, their library of which they pay particular attention to.

Cragg's is an attractive store to visit. There is generally something new on demonstration, and visitors to their store are always cordially received.

Although Halifax has rather more than its proportion of hardware dealers, the subjects of this sketch seem to get their

ull and fair share. Whilst Cragg's arry cutlery of the prominent makers, hey use their energies in the selling of heir own brands, so much so that an rticle with their own brand is looked n as being of high-grade.

Outside of the goods that might be lassified as hardware, Cragg Bros. & o. act as agents for showcases, sewing achines, refrigerators, police supplies, nd hardware shelf boxes.

.. J Grant & Co., 65 Upper Water Street.

Mr. Grant was originally in partnerhip with Geo. H. Smith, but about ighteen years ago started in business n himself.

They make a specialty of carriage ardware and fishing hardware. Their hief business is done with firms in ova Scotia and Cape Breton. They reort trade as very dull this year owing o the fact that the catches of fish have een very light.

E. K. Spinney. Yarmouth.

One of the best-known hardware jobers and importers in Nova Scotia is Ir. E. K. Spinney, who has been doing usiness in Yarmouth for a great numer of years, and has built up a very xtensive trade in the Maritimes. His lace of business is on Main street, his arehouse extending back to Water treet, where he keeps an extensive line f all kinds of hardware and ship supplies. Mr. Spinney, besides taking an ctive interest in the Maritime Hardare Association, has occupied the resident's chair for the Maritime Board f Trade for the past year.

MODERN EDGE-TOOL MAKING.

THE suppression of hand labor by mechanical processes in the old craft trades of Sheffield continues o make rapid progress, says the Irononger, and we are able to report a rther development of this tendency hich possesses peculiar interest, since relates to a branch of industry which as been regarded as quite outside the pplication of machinery. We refer to e making of edge and joiners' tools. he term covers a wide range of goods hich present many variations of shape, id are required to perform work which ecessitates the highest effectiveness and rability. Machinery, however, lends self more to straightforward work, and most valuable on repetition articles. ntil very recently, therefore, the opinn was stoutly and almost universally maintained by makers of edge and joiners' tools that whatever might happen in other industries it would be impossible to use machinery to any appreciable extent in their trade. That belief has now been completely shattered, and if the innovations carried out in one or two of the Sheffield works be followed generally, hand labor will play but a minor part in the production of the goods referred to in the near future.

A Sheffield toolworks in which machinery had been introduced presents more the appearance of an engineering establishment than the home of one of the oldest of the city's handicrafts. Nearly every kind of cutting-tool was being forged under power hammers, some of them of a special and ingenious design. Chisels, bits, and even plane-irons were included, the most awkward shapes being successfully formed. The familiar forger and striker with their anvil and hearth had been dispersed in wholesale fashion, the machines which rendered them unnecessary being tended by young fellows who had undergone but a brief training for the work. Milling machines were extensively employed in forming teeth and cutting parts of tools, and turning out grosses more quickly than dozens under the old system when such processes were done by men using a file. Special machines had been installed for performing several other minor processes and the effect of the whole innovation has been enormously to economize production, and to place the makers on more equal terms as regards cost with their rivals abroad, who have enjoyed the advantage of machinery for years. In other similar works in the city machinery is being gradually introduced, and skilled workmen are being sent adrift. It is unfortunate for these men that few of them are able to adapt themselves to the new conditions, the result being that the victims of the industrial revolution which is in progress are increasing. The employers are certainly doing their best to mitigate the hardships which progress imposes on the few, and it is a fact that scarcely any apprentices have come into the trades for a number of years. The change means a serious increase to the capital outlay of the firms concerned, and owing to the enormously increased output they will have to seek for a corresponding increase of turnover.

A similar and even more drastic revolution is proceeding in the razor trade on account of the introduction from Germany of machinery for grinding blades hollow. To grind hollow blades by hand is a slow and costly process, but the machine turns them out with marvellous rapidlity, and in such a condition that they can be quickly finished off by a trained youth. The blades are also forged by mechanical hammers. By these means the cost of producing razors has been greatly reduced, and already the firm possessing the plant we are referring to has been able to re-open accounts in the United States which had been closed for years in consequence of German underselling. More razors are bought per head of population in the United States than in any country in the world, and the Germans have captured a large slice of the trade with improved facilities for cheap production combined with high finish. Sheffield razors should soon regain their footing in that valuable market. Many razor grinders and forgers are earning very scanty wages or even nothing at all, and it is stated that some of them have punished themselves unnecessarily by refusing to follow the machines.

SUMMER REMINDERS.

Make a special effort to dispose of the balance of your hammocks and lawn tools. The season's getting late.

Advertise fruit jars and preserving kettles and make a display of fruit goods.

Machine oil will be in active demand during the Fall. Is your stock in good order.

Fencing of all kinds finds a ready sale in Summer and Fall. Push this line now.

A sale of five and ten cent graniteware articles is a good thing to advertise just now. It brings customers.

Are you getting your share of the trade in builder's hardware? If not, ask yourself the reason why.

Are you making the tinshop pay? At all seasons of the year it should be a paying branch of the business.

Why not have a demonstration of food choppers and bread mixers. These are articles which should be in every home throughout the country.

How about your lighting system? Now is the time to prepare to capture a big trade in the Fall on lighting fixtures. There are many new lines suitable for all sections. Choose a good system and get ready to push it actively.

CRAGG BROS. & CO.

THE CUTLERY HOUSE OF HALIFAX

Wholesale and Retail Cutlery, Hardware and Imported Kitchen Furnishings.

HALIFAX, N.S.

How Starr Skates are Made.

One of the most prominent skate factories in the world is located in Dartmouth, a thriving Nova Scotia town on the eastern side of Halifax harbor. We refer to the works of the Starr Manufacturing Co., Limited. These works were established away back in 1866, their chief purpose then being the production of a self-fastening skate, known as the "Acme," the principle of whose fastening is so good that it has been widely imitated.

No doubt these skates will interest many of our readers who indulge in pleasure skating quite as much as the splendid lines of hockey skates now produced at the Starr works. At the time it was invented, the "Acme" embodied all the good points of skates then produced, and the makers claim that it has not been excelled since. The fastenings are secure; the skates are easily adjusted, and when once adjusted remain so; the curvature of the blade is correct, which enables the user to perform all difficult movements with ease; there are no complex parts, so that the skate possesses durability and holding power and will not easily get out of order.

The engravings which accompany this article show parts of several departments of the factory and illustrate to a limited extent some of the processes of manufacture. Economy is secured at the start by the company's possession of cheap water power. They control a beautiful stream which, finding its source in the country back of Halifax, flows through a chain of picturesque lakes and empties into Halifax harbor through a channel which originally was a canal, but was totally abandoned with the advent of better transportation facilities. Some of the skilled hands in the factory to-day have been employed there for thirty years and over, and are experts in their several departments. The machines used for such processes as forging runners and making the various fine parts for their high-grade and other skates, are all the most up to date that the company could secure. The factory is never allowed to fall behind in equipment, but whatever is conducive to better and more economical production is quickly adopted.

An Interesting Process.

A Part of the Machine Shop.

It would be very difficult to do justice in describing the factory itself in an interesting way in the limited space at our disposal, therefore reference to the accompanying engravings must suffice. There the reader will see the machine shop, where various parts are constantly being made; the department where the runners and other parts are cut out of sheets of steel, tempered by the Starr Co.'s own special process to insure ex-

It was to manufacture the "Acme" that the Starr Manufacturing Co. were first brought into existence. The original works were very small, yet it was but a very short time before the skates became so well known that expansion was absolutely necessary. The sales grew and the skates became still more popular and more additions to the factory followed. Eventually the "Acme" commenced to get in demand all over the world, and in the face of competition this skate sells to-day in such distant markets as Great Britain, Germany, Russia, and even in the United States, into which country they gain admission in spite of the very high tariff.

Skates produced in this factory are made of the very best materials and put together by the most competent of workmen, going through sixty processes before they are completed and ready for the market. Then, before they are allowed to go out of the works, they are subjected to a searching test, so that no faulty or defective skate is allowed, if possible, to get into the hands of the buyers.

One View of the Polishing Room.

tra strength and stiffness; the polishing department, where the runners are polished and given the exact curvature and

Plating Room.

edge that make them so popular; the plating department, where the more expensive goods get their finish of gold and silver or nickel; the finishing department, where the parts are put together and the product tested, and finally the packing room, where the skates, done up in neat packages, are made ready to be sent forth to all parts of the world.

Nowadays the business of the Starr Co. is very much more extended and more complicated than a few years ago, because of the greater number of lines produced. While self-fastening skates are still used and found good and convenient by a large proportion of the skating public, there are many who consider them not so desirable as skates that fasten to the boot, for such purposes as hockey playing, racing, etc., and, as prosperity increases, there is a general tendency to buy skates of this character. Ever alert to changing conditions, the manufacturers have followed up the policy of finding out exactly what the

Assembling and Testing Room.

A Corner in the Packing Room.

skaters want and producing skates to suit them.

Hockey skates are now in large demand, and one of their leaders in this line is the "Micmac," which is made in five different styles, two of which have plain runners and two flanged, and one of each kind of runner having what is called a puck stop. The fifth style is called the "Featherweight Micmac," being made with a very thin plain runner, webbed to give it rigidity and prevent buckling. The "Micmac" (both standard and featherweight patterns) is very popular among leading hockey players in Canada and the United States, and its popularity is growing each year. Then there is the "Starr Hockey," which the makers call the "Standard of Canada." This is the lightest skate made, and is particularly strong, being capable of standing a breaking strain on the tops of 1,100 pounds. Along with the leaders is classed the "Regal," the most expensive hockey skate made by this company. The pattern of the "Regal" was approved by the leading hockey players before the skate was put on the market, and this fact, added to its appearance and evident high quality, encourages the confidence of dealers.

Another production of this factory is the "Micmac" hockey stick, for which is claimed the greatest durability obtainable. These sticks are not cut out of boards and then bent to the required shape, but close grained, tough woods are selected which have grown with the bend desired. In other words, "Micmac" hockey sticks grow in the Nova Scotia woods, and at the factory are only trimmed down and given the proper balance.

The Starr Manufacturing Co.'s skates have taken the highest awards wherever exhibited, at home, in the United States and in Europe; these awards covering a period of nearly thirty years.

In addition to manufacturing skates, the company are now large makers of bolts, nuts, rivets, washers, spikes and a full line of goods of a similar character. They have largely increased their plant for making these lines from time to time, and the factory now covers a space of several acres.

The British Columbia Electric Railway Co. are going to increase the capacity of their power plant in Vancouver by one-third. This will mean an addition of 3,000 h.p. and it will necessitate that the power house be increased in size. The company are also going to construct an electric tramway, light and power system at North Vancouver at an estimated cost of $20,000.

Eleventh Annual Convention of the Maritime Board of Trade

Yarmouth, N.S., August 16, 17 and 18, 1905

Special Report by Our Own Representative.

DESPITE wet weather at the outset and a somewhat small attendance of delegates, the eleventh annual convention of the Maritime Board of Trade at Yarmouth, N.S., will go down to history as one of the most valuable and satisfactory meetings ever held by this important commercial organization. A stage has at length been reached in the career of the board when its members have come to the conclusion that its functions should be more than deliberative. At the Yarmouth meeting, time and time again, speakers impressed on the board the need for action, and as a result, this year an important step has been taken by the board and a permanent committee has been appointed to follow up and take action on the various resolutions passed.

Prince Edward Island was prominently to the fore at the meeting and the presence of Rev. Father Burke contributed much to quicken the interest of the board in the efforts the Islanders are making to secure their pet project,—the tunnel. At the election of officers, another Prince Edward Island man, Captain Joseph Read, was honored by being appointed to the presidency.

Several important resolutions were put through. A fast Atlantic service, better train service throughout the Provinces, a legislative union of the Provinces, confederation with the West Indies, the cultivation of tourist travel, steel shipbuilding, the abolition of statute labor and the representation of incorporated towns in county councils, were among the subjects discussed.

The meetings were presided over by Past-President E. K. Spinney, of Yarmouth, who, together with Mayor Armstrong, the city council and the Yarmouth Board of Trade, did all in their power to make the visit of the delegates a pleasure. By way of entertainment they gave a drive about the city just prior to the Thursday afternoon session, while on Friday a most enjoyable trip to Barrington by rail and return by boat was provided.

As the place for next year's meeting, Amherst was selected, as being a central place and one to which many delegates could come.

The Convention Opens.

In a steady downpour of rain, which has lasted since the preceding afternoon, the convention opened in Boston Hall soon after ten o'clock on Wednesday morning. President E. K. Spinney occupied the chair, and with him on the platform were Vice-President Joseph Read, Secretary Creed and Father Burke of Alberton, P.E.I. About fifty members were present.

Before proceeding with the business of the convention the chairman called on Mayor Armstrong, of Yarmouth, and introduced him to the delegates.

The Mayor's Welcome.

Mayor Armstrong recalled having invited the board to come to Yarmouth last year at the meeting at Moncton. It was an additional pleasure for him to be privileged to welcome the delegates this year to Yarmouth. On behalf of the citizens of the town he extended a most hearty welcome to all those present and hoped that their sojourn in Yarmouth would be both pleasant and profitable.

Roll Call.

Secretary Creed then called the roll and the majority of the constituent boards were found to be represented. The list of delegates present was as follows:

Nova Scotia.

Amherst—E. B. Elderkin, C. Owen Thompson.

Annapolis—J. M. Owen, F. C. Whitman.

Beaver River—Herbert Rice.

Bennick—J. E. Woodworth.

YARMOUTH.

Historically, Yarmouth is one of the most interesting towns in the Dominion of Canada, as in point of time it is one of the oldest. While to-day it has lost much of its early splendor as a great shipping port, this deficiency has been somewhat compensated for by a greater attractiveness in its appearance, which bids fair to make it one of the most pleasing tourist centres in the Dominion. Situated near the western extremity of Nova Scotia, on an arm of the Bay of Fundy, it extends along a gentle slope for a considerable distance east and west. It has direct railway communication with Halifax by Dominion Atlantic Railway, while it can also be reached by boat from Boston and other points.

At one time Yarmouth could boast of possessing the second largest tonnage of any port in the world, having no less than 260,000 tons afloat at one time. It was then world-famous. To-day its maritime interests are comparatively small and its industries are not very important. It is, however, a beautiful residential town, possessing attractive homes, beautiful gardens, extensive hedges and excellent roads. Its leadtng hotel, the Grand, is one of the best appointed houses in the Provinces, and one where the tourists' lot is made extremely pleasant.

Canning—C. E. Starr.

Canso—J. B. Saunders.

Digby—Clarence Jamieson, E. F. L. Jenner, W. E. Van Blascom.

Halifax—J. E. DeWolf, A. Stephen, W. A. Major, A. M. Bell, Hon. W. Ross.

Kentville—M. G. DeWolfe, C. W. Webster, Robert Harrington, W. E. Potter, Wm. Yould, B. H. Dodge.

Kings Co.—J. A. Kinsman.

Lockport—Robert McDonald.

Parrsboro—James W. Day.

Windsor—W. H. Roach.

Wolfville—J. D. Chambers, R. W. Starr.

Yarmouth—E. K. Spinney, B. B. Law, E. N. Armstrong, Arthur W. Eakin, Seymour C. Baker, W. D. Ross, R. S. Crawford, Augustus Cann, Willard M. Kelly.

Sydney, C.B.—C. P. Moore, S. P. Challoner.

New Brunswick.

St. John—W. S. Fisher, E. A. Abbott, H. C. Tull, L. G. Crosby.

Chatham—W. S. Loggie, James Nichol.

St. Stephen—E. G. Vroom.

Prince Edward Island.

Alberton—Rev. A. E. Burke, John Agnew.

Summerside—Joseph Read, M. P. P., Neil Sinclair, W. A. Brennan.

Committee on Orders.

A committee to determine the order in which the various subjects proposed by the local boards should be discussed was named by the chairman and was composed of J. E. DeWolf, Halifax; F. C. Whitman, Annapolis; E. B. Elderkin, Amherst; C. Jamieson, Digby; B. H. Dodge, Kentville; J. Kinsman, Kings County; J. Day, Parrsboro; W. H. Roach, Windsor; R. Starr, Wolfville; W. Kelley, Yarmouth; S. P. Challoner, Sydney; L. G. Crosby, St. John; J. Read, Summerside; Father Burke, Alberton; E. G. Vroom, St. Stephen; C. P. Moore, Sydney.

While the committee were absent from the hall, Secretary Creed read letters of regret from R. L. Borden, W. S. Fielding, Hon. Senator Josiah Wood, Sackville; P. Gifkins, general manager D. A. R.; D. Pottinger, general manager I.C. R.; J. M. Lyons, general passenger agent, I.C.R.; Lieut.-Col. J. B. Maclean, Toronto; the secretaries of the Montreal, Ottawa, Toronto and Hamilton Boards of Trade and the Montreal Star and Toronto Globe.

Report of Committee on Resolutions.

After a protracted session the committee on resolutions presented their report, recommending the discussion of the following subjects:

1. Annapolis—The inspection of cooperage stock and a standard apple barrel.
2. Berwick—The necessity of an improved railway train service between Halifax and that portion of the Annapolis Valley west of Kentville.
3. Halifax—Fast Atlantic steam service.
4. Kentville—Should not incorporated towns have representation in the council of municipalities?
5. Kentville—Municipal ownership of electric light plants.
6. Wolfville—Preservation of historic grounds.
7. Kings County—Is it desirable that the young men of the Maritime Provinces between the ages of 16 and 21 should be obliged to perform three annual drills in the militia of Canada?
8. Sydney—The desirability of wider publication in Maritime press of reports of Canadian commercial agents abroad.
9. Halifax—Protection of inland fisheries.
10. West Prince—Subsidy for steam-

ship to ply between ports on the north side of P.E.I., Miramichi, Magdalene Islands and Sydney.

11. Parrsboro—Diversion of the Intercolonial by building a loop from Truro to Amherst, via Parrsboro.

12. Amherst—The advisability of uniting the three Maritime Provinces under one Government. Union of the Maritime Provinces.

13. Amherst—The question of the advisability of advertising by literature the advantages of the Maritime Provinces as a desirable place of settlement.

What can be done to investigate and make better known the resources of these Provinces?

Co-operative efforts on the part of the Governments of the Maritime Provinces to promote desirable immigration from Europe.

14. Bear River—The necessity of urging upon the Government the granting of adequate financial assistance to any company that will build a railroad from Caledonia in the County of Queens to a point on the D.A.R. at or near the mouth of Bear River or to Digby, as may be deemed advisable, thereby affording railway connection to that section of Nova Scotia which is entirely without railway communication, and placing the towns along the route of said railway upon equal terms with other parts of the Province.

15. Halifax—Is it advisable to place the Intercolonial under a commission?

16. St. John—Daily steamship service between New Brunswick and Nova Scotia via St. John and Digby.

17. Wolfville—Abolition of statute labor in Nova Scotia.

That the Maritime Board of Trade urge upon the Governments of New Brunswick, Nova Scotia and Prince Edward Island the importance of improvement in the common roads of the Provinces, and to take steps to diffuse information on the subject, especially by the distribution of literature and the appointing of an official who shall confer with the county councils and lecture on the subject in the various communities throughout his Province.

18. St. John—Recoinage by the Government of worn and mutilated Canadian silver coins.

19. Charlottetown, Southern Kings, Souris, Summerside and West Prince—Transportation between P. E. Island and the mainland.

Tunnel under the Northumberland Straits connecting P.E.I. with the mainland.

Better Winter communication between P.E.I. and the mainland.

The tunnel from P.E.I. to the mainland.

Daily Winter communication with the mainland.

20. Yarmouth—The advisability of the Government of the Maritime Provinces assisting local associations or boards of trade in promoting tourist travel.

21. Halifax—Steel shipbuilding.

22. St. John—Improvement in the London steamship service.

23. St. John—Prohibition of export of pulp logs.

24. Sydney—Night express train between Sydney and Halifax.

25.—Advisability of confederating the Dominion of Canada and British West Indies.

26. Yarmouth—The advisability of the Dominion Government taking over the railways of Western Nova Scotia and making them a part of the Intercolonial system.

WEDNESDAY MORNING.

Secretary's Report.

Amid applause the veteran secretary of the board, C. M. Creed, rose to present his report as follows:

To the President and Members of the Board of Trade:

Gentlemen,—Your secretary-treasurer begs herewith to hand you his report for the current year. All the resolutions and recommendations passed at the last annual meeting were forwarded to the Ministers of the various Departments of the Federal Government, those concerning the Local Governments were forwarded to the Premiers of same. Copies of The Canadian Grocer containing the proceedings of the annual meeting, were forwarded to all boards of trade in the Maritime Provinces, as also to the delegates to the meeting.

Members of the Maritime Board of Trade in Convention Assembled at Yarmouth, N.S.

On October 28, in order to keep the resolutions passed at the annual meeting before the boards, they were printed and copies forwarded to each board, with a circular letter impressing upon them the necessity of calling the attention of the members of both the Dominion and Local Parliaments in their counties to them.

On December 21, copies of all resolutions were forwarded to W. S. Loggie, M.P., Chatham, N.B.; J. J. Hughes, M.P., P.E.I.; Dr. J. B. Black, M.P., Windsor; H. J. Logan, M.P., Amherst, and B. M. Law, M.P., Yarmouth, in advance of the meeting of the Federal Parliament in order that they could become familiar with them. On January 23, shortly after the opening of the Federal Parliament, copies of all resolutions were forwarded to all the members from the Maritime Provinces and also to several of the Senators. The correspondence connected with the same, as also from

the various boards, being too voluminous to read, are on the table for the inspection of the members.

Correspondence With the Board.

This has been conducted with vigor during the year. Some of the secretaries have promptly responded to notices and letters, but the majority of them have been slow in answering, while some have never answered. It is hoped, however, the secretaries will be more prompt the coming year.

The subjects for discussion, notices to boards of the annual meeting and railway arrangements for delegates, were mailed to the boards affiliated and unaffiliated.

The annual report was published as usual and forwarded to all the boards of trade in the Maritime Provinces, and circulated generally as occasion presented.

New Boards.

During the year two new boards have been formed in Nova Scotia, viz.: Lockeport and Bear River. I am also pleased to say that the Boards of Parrsboro and North Sydney have re-affiliated and are in fine working order.

Unaffiliated boards have had every attention paid them, they have been written to frequently asking them to affiliate, I also forwarded them copies of all resolutions passed at the annual meeting and copies of the annual report, and invited them to send delegates to the annual meeting.

Affiliated Boards.

The affiliated boards on the roll of membership are as follows: New Brunswick, 6 boards, Chatham, Moncton, Newcastle, Sackville, St. John, St. Stephen; Prince Edward Island, 5 boards, Charlottetown, Summerside, Souris, Montague, Alberton; Nova Scotia and Cape Breton, 23 boards, Annapolis, Amherst, Antigonish, Berwick, Bear River, Canning, Canso, Chester, Digby, Halifax, Kentville, Kings Co., Lockeport, New Glasgow, Pictou, Parrsboro, Truro, Windsor, Wolfville, Yarmouth, Louisburg, Sydney, North Sydney.

Unaffiliated Boards.

New Brunswick, 2 boards, Fredericton, Woodstock; Nova Scotia and Cape Breton, 10 boards, Bridgewater, Dartmouth, Hantsport, Lunenburg, Liverpool, Middleton, Pugwash, Stellarton, Westville, Glace Bay. Total membership of all boards 2,205.

Chambers of Commerce.

The sixth congress of Chambers of Commerce of the Empire will be held at London, G.B., in June, 1906. An invitation has been received from the secretary, Kenric B. Murray, Esq., asking this board to send delegates and subjects for discussion at said congress, to which a reply was sent thanking him for the invitation and informing him that it would be laid before the members at the annual meeting at Yarmouth, on August 16.

In conclusion, during the past year everything requisite has been done for the advancement of the board, at the same time doing all possible to assist your worthy president, and as usual the valuable assistance and advice of M. G. DeWolfe, Esq., of Kentville, has been given, and also the able assistance of E. H. Armstrong, Esq., of Yarmouth, the corresponding secretary.

Accounts for the Year.

The accounts for the year are all prepared, but as several boards will pay their per capita tax before the close of this day's meeting they will be presented to-morrow for your approval and audit.

All of which is respectfully submitted.

CHARLES M. CREED,
Permanent Sec'y-Treas.

On motion of Captain Read, seconded by C. Jamieson, the report was unanimously adopted.

President's Address.

The popular president of the Maritime Board, E. K. Spinney, was heartily received on rising to read his annual address.

Gentlemen of the Maritime Board of Trade :

Before proceeding to the subject of my address, I wish to avail myself of this, the first opportunity I have had, to express my thanks for the honor you have done me in electing me president of this most important body of commercial and professional men. I regret that this

Capt. Joseph Read, Summerside, P.E.I.
President Maritime Board of Trade 1905-06.

prominent position has not been placed in the hands of one more competent to discharge its duties, or who would have achieved greater results. I regard your generous act, however, as a compliment to the town of Yarmouth.

You will also permit me, on behalf of the Yarmouth Board of Trade to extend a most hearty welcome. I sincerely trust that the time spent here will be well freighted with pleasure to yourselves, and as a result of your deliberations a vast amount of good may be done to the Maritime Provinces in particular and to the Dominion of Canada generally.

The discussion of the very important matters which will come before you systematically and vigorously, following up decisions reached by determined effort, must result in needed reforms and increased prosperity.

The report of your secretary, Mr. C. M. Creed, whose efforts have been indefatigable in the interest of the boards of trade of the Maritime Provinces, has been placed before you.

While the growth and extension of these boards have not been so great as we could have wished, yet there has been much encouragement in the fact that two new boards have been established and two others have become affiliated with the Maritime Board in the past year, and which now represents within its fold thirty-seven boards with memberships aggregating nineteen hundred and eighty-five members.

We can look to the future with confidence in anticipating the great influence they may exert on all important questions, voicing as they do the carefully considered views of the leading commercial and professional element of the Maritime Provinces.

Canada's Growth.

I do not propose to take up much of your valuable time on this subject, but simply desire to draw your attention to the fact that immigration has increased our population during the past ten years by 443,661. Of this Europe supplied 284,096 and our neighbors to the south 159,565.

Nearly two-thirds of this particularly large increase to our population has taken place during the years 1903 and 1904, and statistics of immigration into Canadian ports during the present year give promise to exceed greatly that of the past two years.

The financial report of the exports in 1904 shows an increase over that of 1895 of $99,882,432, while the imports in comparison with similar dates show the enormous increase of $148,430,121.

Canadian Banks.

show a net increase from beginning of 1900 to June 30, 1905, of

In paid-up capital ... .$	15,975,357
Net increase in reserve	23,666,779
Increase in deposits	227,309.721
Increase in current loans ...	203,375,159
Increase in circulation	33,249,751

The above statement shows : First, that Canada is regarded favorably as a permanent home for reasons of climate, resources and broad educational facilities. Second, this fact has developed the enormous expansion of commerce. Third, the successful employment of capital is the natural outcome of commercial prosperity.

Transportation.

Since your last annual meeting that second great national transcontinental highway, the Grand Trunk Pacific. has made substantial progress. Corps of engineers have surveyed a great section of the route which this important road

WIRE NAILS
TACKS
WIRE

Prompt Shipment

The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

will traverse. It will only be a few months before the work of construction will begin, opening up a new field for the further expansion and development of this, the most important colony of the Mother Country.

While the greater benefits arising from the construction of this great national highway must necessarily accrue to the western Provinces, and while the transportation question is of supreme moment to the whole Dominion, its importance to Maritime Province interests, both for land and sea transit, cannot be overestimated.

Our coast line of 3,000 miles, dotted with commodious ports with rail connections, demand at our hands the imperative duty of unflinching vigilance to secure the material advantages to which our geographical position entitles us.

Rail connection is steadily increasing through the length and breadth of the Atlantic Provinces, and it is confidently anticipated that by the time the national transcontinental line is completed the internal arteries will supplement the great main trunk system with up-to-date branches in each of the three Provinces.

The Halifax & South Western Railway is already circling the western portion of Nova Scotia, and construction will be well under way by next season on the eastern side of that Province, giving alternate lines from Yarmouth to Sydney.

The heart of New Brunswick will be intersected by the N.T.R. and other connections between Quebec and Moncton. The long-desired and urgently-needed communication between New Brunswick and Prince Edward Island will round out the plan of twentieth century methods of transit to and from eligible trade centres at all seasons in this end of the Dominion. The coastal steam packet service gives evidence of continuous improvement. Substantially every harbor and connecting vantage point is being brought in regular touch with the principal supply centres of trade in the Maritime districts.

Business Interests.

In natural products the output throughout the Maritime Provinces has been fairly well maintained. The catch of fish has not been up to the ordinary average but higher prices have prevailed, compensating to some degree for the shortage.

An important paper was introduced at your last annual meeting discussing the importance of the Government taking active measures to preserve the lobster fisheries. While no action has yet been taken, I am informed the subject is under their careful consideration and doubtless some course will be adopted by them to further this very necessary end. Efforts should not be relaxed, as it is a matter of vital importance to those engaged in this lucrative industry.

The recommendations to establish freezing establishments and fertilizing plants for abating the ravages of the dog fish have had the attention of the Ottawa authorities, and a better condition in both cases is hoped for in the near future.

The depressed condition of the lumber trade in Great Britain has had the effect of restricting the output of lumber in sections catering to this branch of supply. The South American and West Indian markets, however, are well maintained, with the result that the mills operating in this class of product are actively and lucratively employed.

Coal mining progresses favorably, the large quantities now raised annually making it one of our leading industries. The gold from our gold fields shows a trifle lower result than the average of previous years, but with the introduction of new and up-to-date machinery much improvement is anticipated. In manufacturing industries steady advance is well sustained, the operations of several organizations assuming proportions entitling them to the front rank in comparison with similar enterprises in any part of the Dominion. The distributing business, the West Indies' trade, and different wholesale and retail trades have all enjoyed a profitable turnover, the imports and exports of the three Provinces giving in nearly every instance fair all round averages in comparison with former years.

Tourist Travel.

The volume of tourist business in the direction of the Maritime Provinces maintains satisfactory averages. Some idea of its magnitude can be gathered from the fact that the line of steamers plying between the United States and Yarmouth carried to and from these ports last season over sixty thousand passengers. Statistics for this year are not, of course, complete, but during the past month the number of passengers arriving at this port was increased by six hundred over the same month last year.

The scenic advantages and salubrious climate in our sea port Provinces are being gradually supplemented by hotels and Summer cottage accommodations in keeping with modern improvements, while entertainment and recreation show marked improvement with each successive season.

By systematic attention to advertising and furnishing concise guide books and data, the tourist business has become a recognized and welcome addition to the ordinary "between season" business of many localities.

The aggregate of tourist expenditure in the Maritime Provinces now runs into several millions of dollars annually, clearly illustrating the advantages to be derived from well directed effort. This important question will come up for your careful consideration during the present session.

Steel Ship Building.

The ardently-desired establishment of steel ship building at some point within the Maritime Provinces to replace the former flourishing industry of wooden ship building has not yet materialized, although strenuous efforts have been made to make a commencement at Halifax as an eligible locality. The post-

ponement of the granting of a bonus by the Dominion authorities at the recent session of Parliament is a source of regret to the persons undertaking this important national work, but further efforts will be made to secure its realization in the near future.

A modern steel ship building plant has been well described as the mother of nearly every other industry, and the expansion of population resulting has been marvelous, especially in the ship yards of Germany as the latest instance. The subject is doubtless an ambitious one to carry out, but the enterprise and determination of the live business men in these Maritime Provinces will surely solve the problem at no distant day.

Chamber of Commerce of the Empire.

The London Chamber of Commerce has notified the boards of trade and commercial bodies throughout the Empire that the sixth Colonial Congress will be held in London in June, 1906. The last congress assembled in Montreal in 1903, about five hundred delegates being in attendance. Numerous important subjects will come up for discussion, some of which may well come within the scope of this board.

Trade and tariff relations between the Mother Country and its dependencies —the vital question of Imperial defence, codification of the commercial laws and customs of the whole Empire in connection with bills of lading, consignment advances, etc., are among the subjects for discussion suggested by the London Chamber.

The beneficial results accruing from these colonial conferences fully justify systematic endeavor to assist in development of the movement to promote concentration of Imperial influence on twentieth century lines to meet the strenuous trade competition in evidence throughout the world.

The cordial reception of the Canadian Manufacturers' Association in England recently is an object lesson, illustrating the far reaching benefits to be achieved by thorough combination in efforts to impress business circles in Great Britain of the great strides of progress taking place in all sections of Canada from year to year.

Maritime Union.

The rapid expansion of the western portion of the Dominion of Canada, demonstrated by the creation and admission of the Provinces of Alberta and Saskatchewan, emphasizes the importance of safeguarding the status of the Atlantic Provinces on lines of co-operation, securing a due equilibrium of political influence. The prospect of a legislative union of the Maritime Provinces was one of the leading ideas submitted at the formation of the Maritime Board of Trade.

Economy in local administration and more substantial influence in the councils of the several Parliaments are as potent factors to-day as they were a decade ago.

In connection with this important question should also be considered the imperative necessity of our Federal Government arranging some basis by which Newfoundland can be brought into union with Canada. The benefits accruing from such a result would be of incalculable value.

Fast Atlantic Service.

A slight improvement in the Atlantic mail service between the Mother Country and Canada is claimed from the records of the two new turbine steamers placed on the route in March and April last.

The first voyages of the Victorian and Virginian from Moville to Halifax did not come up to expectations. But somewhat better speed was accomplished by the Cape Race course up the Gulf of St. Lawrence to Rimouski—the last trip of the latter having reduced the time between Moville and Rimouski to six days

A test was made in June of the chances of a more rapid and satisfactory Atlantic mail delivery by intercepting the Virginian off the port of North Sydney and rushing the mails by special trains from that point. The result was a considerable improvement in the deliveries to the Maritime Province trade centres, but the deliveries beyond Rimouski were somewhat disappointing.

The running time of the special train between North Sydney and Montreal established a record, conclusively demonstrating the great advantages to be secured through landing the mails at an Atlantic terminal by steamers of modern speed. The subject will doubtless be one of those nominated for your consideration, as in the case of each of the annual gatherings since the formation of the Maritime Board of Trade.

Insurance.

Excessive premium rates of fire and marine insurance have occupied the attention of the Maritime Board of Trade for several years past, but an all round satisfactory solution has not yet been reached.

An important paper was discussed before your board at one of your previous sessions urging upon the wholesale houses insisting upon their clients protecting themselves against losses by fire. It is to be regretted that no practical results have followed the resolutions passed at that time. The subject is worthy of your earnest attention.

In addition to the increased and necessary security to the system of credit, it would lead to such improvement to the physical hazard that lower rates of premium would unquestionably result.

Some improvement has taken place in the rates on marine risks, due to the additional care given to our seaboard by the several Governments in increasing and improving the light and buoy service.

The business of life insurance, which is of even still larger importance to the people as a whole, also represents phases suggesting careful inquiry as to the safety of the invested funds representing the hard-earned savings of nearly every family in the land.

The overwhelming necessity of absolutely faithful Government inspection applies to holders of policies in the Maritime Provinces as urgently as in other portions of the continent. On general public grounds it is beyond doubt a subject demanding a certain amount of watchful consideration by representative bodies.

Exhibition.

The Provincial and county exhibitions have been held throughout the Maritime Provinces as usual, resulting in healthy emulation and endeavor in the various localities.

Next year the Dominion Industrial Exhibition will be held in the Maritime Provinces, Halifax having been decided on as the location. To these fairs and

exhibitions we are undoubtedly indebted for the establishment of the Agricultural College at Truro, by the Dominion Government, under the able superintendence of Professor Cummings.

In view of the establishment of a line of steamers between Canada and Mexico, opportunities are presented for trade in farm products and live stock in the West Indies, as well as in Mexico and South America.

The Maritime Stock Breeders' Association has already taken steps to develop its business by holding annual auction sales, duly advertised in these new markets.

Municipal Betterment.

A noticeable advance is taking place in many cities, towns and villages in the Maritime Provinces in the better shape of roads and the installment of asphalt pavements, the cultivation of lawns in front of residences and numerous other improvements designed to further higher ideals of utilizing the conveniences and comforts to modern social needs.

All of which is respectfully submitted.
E. K. SPINNEY, President.

Referred to a Committee.

When the applause evoked by the address had subsided, M. G. DeWolfe rose and expressed his appreciation of the president's report, which he termed one of the best he had ever heard during his eleven years' connection with the board. He moved that the address be referred to a committee consisting of J. M. Owen, Alex. Stephen and Father Burke, who would report at the evening session. The motion was seconded by J. E. DeWolf and carried.

The convention then proceeded to take up the subjects for discussion in the order suggested by the committee.

A Standard Barrel.

F. C. Whitman, of the Annapolis Board, introduced the subject of a standard apple barrel and the inspection of cooperage stock. He thought there should be a standard-sized barrel for the whole Dominion. In Ontario, where the barrels were made from seconds and flour barrel staves, the size was larger than in Nova Scotia and the apple shippers of the latter Province were consequently laboring under a disadvantage. Mr. Whitman explained that a committee from the Nova Scotia Fruit Growers' Association had gone to Ottawa, and they had been promised a general meeting next June, at which a standard barrel would be established.

At present, conditions in Nova Scotia were most unsatisfactory. A large number of barrels were unfit for use and all sizes were utilized. The remedy was legislation along the line of uniformity.

Father Burke, president of the P.E.I. Fruit Growers' Association, in seconding the resolution, suggested leaving the working out of details to the Government and resolving the resolution into the following form:

"That a uniform barrel be adopted for Canada and the material entering into its construction be placed under Government inspection."

Upon Mr. Whitman accepting Father Burke's revision of his original resolution, the motion was put to the meeting and carried unanimously.

WEDNESDAY AFTERNOON.

At 3.15 the convention was again called to order, when Chairman Spinney read a telegram from the Amherst Board inviting the Maritime Board to come to Amherst next year.

Improved Railroad Service

J. E. Woodworth, of the Berwick Board, in introducing the resolution from his board (No. 2), pointed out that his district was being discriminated against by the Dominion Atlantic Railway in their train schedule. People living east of Kentville could go to Halifax or Sydney, spend the day there and return the same day. Business men west of Kentville could only reach Halifax by an afternoon train and must spend the night there. Mr. Woodworth also pointed out that the small fruits from the Valley were at a great disadvantage in reaching the Halifax market. Correspondence with Halifax was also seriously handicapped by the lack of trains. Efforts to get the D.A.R. to remedy the trouble had so far been futile.

Mr. Woodworth moved the following resolution: "That in the opinion of this board, increased facilities for railway travel between Halifax and that portion of the Annapolis Valley lying west of Kentville should be provided."

This was seconded briefly by J. M. Owen. The discussion was continued by several of the members.

M. G. DeWolfe took exception to the resolution as a local one. He thought the board should only deal with broad and general subjects, and regretted that the present resolution had not been amalgamated with the general question raised by the Yarmouth Board on the subject of railway service, through the whole of Western Nova Scotia.

The chairman proposed deferring the settlement of the question until the Yarmouth resolution came up.

J. E. DeWolf saw no similarity between the two resolutions.

J. E. Woodworth claimed his resolution was not a local one, as the interests involved were not local by any means, but concerned the welfare of the whole Province.

The resolution was carried unanimously.

Fast Atlantic Service.

A. Stephen, of Halifax, found it difficult to introduce this subject in any new way, as it had been up before the board for many years. The question now was, where did the board stand after all the resolutions that had been passed since Confederation. He thought but little progress had been made and hoped that the series of resolutions, which he was about to make, would result in some definite good. The resolutions read as follows:

"Whereas the Atlantic mail service between the Mother Country and her possessions in British North America at the inception of Confederation was admittedly the shortest mail route between the continents of Europe and America, having been already in 1867 fully tested by the matured experience of over a quarter of a century;

"And whereas in the negotiations incident to merging the intended union of the Maritime Provinces into the larger compact between the two Canadian Provinces and their Atlantic neighbors a binding stipulation was agreed to in clause 145 B.N.A., to insure independent modern means of communication throughout the Dominion for obvious national considerations;

"And whereas this stipulation in clause 145 B.N.A. was the one thing needed to maintain the established ad-

vantages of the all-British mail route between Liverpool and Halifax through the construction of the railway between Halifax and Quebec, afterwards known as the I.C.R., or the people's road of Canada;

"And whereas immediately after the Act of Union the alteration of the Atlantic mail route at first to Portland, Maine, and subsequently to an unsatisfactory divided Summer and Winter route has resulted in the transfer of the greater portion of the Canadian Atlantic mails through distant foreign avenues of communication, the Postmaster-General of Canada having stated in Parliament that 564,000 pounds of Canada's Atlantic mail matter had been conveyed via New York in 1903, while only 147,000 pounds (largely parcel post) had been conveyed by the subsidized Canadian mail steamers, notwithstanding our great geographical advantages;

"And whereas the rapid expansion of Canada's cereal areas in the Western Provinces forecasts an immense development of transportation interest by land as well as by sea towards both hemispheres, which transportation interest will be largely dependent on the control of national avenues of transit for mails, passengers and freight equipped on the most modern lines;

"And whereas the opportunity to control the shortest and quickest ocean communication between Europe and America, which was within the grasp of the Dominion, has been unaccountably neglected by the governing powers in Canada, to the amazement of successive viceroys and prominent statesmen and visitors from abroad, who find themselves practically compelled to avoid Canada's direct subsidized mail and passenger service, and seek the better transportation afforded by foreign ports;

"And whereas the recent I.C.R. speed tests between Sydney and Montreal confirm and emphasize the certainty of regaining control of the shortest and quickest mail and passenger route between Europe and America as soon as modern steamers connect;

"Therefore, resolved that the Maritime Board of Trade emphatically urges upon the Dominion Government the paramount importance of stipulating in future Atlantic mail contracts that steamers capable of competing with the swiftest liners on the Atlantic should be the only vessels eligible for mail service and that Canada's expanding revenue justifies the appropriation of adequate subsidies for that purpose.

"And further resolved that the arrival and departure of the Canadian mails for Europe shall be, as far as the Dominion of Canada is responsible, at one Canadian port on the Atlantic coast line, accessible all the year round, in order that the mails between London and Montreal shall be delivered in from 120 to 150 hours, with reasonable regularity at all seasons of the year.

"And further resolved that while it may be inexpedient to enforce binding stipulations as to the transatlantic course for mail steamers, the Maritime Board of Trade once more unreservedly endorses the chart of Capt. C. O. Allen, submitted and approved at the annual meeting held at Sydney, Cape Breton, Aug. 20, 1902, as not only the shortest, but also the safest and most reliable sea route, year in and year out, for subsidized Canadian Atlantic mail steamers."

Mr. Stephen felt that the board was not active enough in this matter, and that resolutions were useless. Delegations received attention from the Government, while resolutions were pigeonholed. He hoped the board would send two or three well-informed men as far as the Pacific Ocean to address the leading Canadian boards and secure their support. He pointed out that much attention was being given to securing quick communication with the west, while the connection with the Old Country was being neglected.

"What is the cause of the delay in the establishment of a fast mail service ?" asked Mr. Stephen. "It is not a matter of such enormous expense. The Allans stand in the way, endeavoring to keep things as they are. They are getting big subsidies for freight boats. How long is this condition to last ? I think it has lasted long enough. Let us subsidize a service which will give us the quickest and best service."

Captain Read, in seconding the resolution, pointed out that it was not the

E. K. Spinney, Yarmouth, N.S.
Retiring President Maritime Board of Trade.

present kind of boats that were required, but boats equal in speed to the best that come into New York harbor. The Government were trying to placate Canadians with small morsels now and then, but Canadians required the best. They should stand on their rights, and when they asked for a fast Atlantic service show that they meant what they said.

S. P. Challoner, Sydney, referred to the fact that Sydney was the nearest point to Europe. Why should steamers go to Halifax, two hundred miles farther west ? In the recent experiment in landing mails at Sydney, Sir Wm. Mulock selected that port because it was nearest to Liverpool. When the mails were landed at Sydney they reached Halifax in 10 hours. Later, when landed at Rimouski, they were 24 hours on the way. He put in a plea for Sydney as the landing place for the mails, and thought that the resolution was restricting the Atlantic port to Halifax.

J. E. DeWolf denied there was any localism in the resolution, and held it should remain as it was.

A. Stephen said it was time to stop the antediluvian method of carrying mails up the Gulf. If they were carried there Sydney was all right, but there were considerable periods when Sydney was not accessible. The board stands on record as favoring the best all round route.

The resolution was carried unanimously.

Towns and County Councils.

M. G. DeWolfe introduced the subject (No. 4) showing how the incorporated towns paid more taxes in proportion than the rest of the county. It was a case of taxation without representation. He moved, seconded by Robert Harrington :

"That in the opinion of the Maritime Board of Trade incorporated towns should have representation in the councils of the municipalities."

Municipal Ownership.

J. W. Day of Parrsboro brought up subject No. 5.—the municipal ownership of electric light plants. He stated that Parrsboro was the first town in Nova Scotia to install its own electric light plant. It was now running 150 sixteen candle power lights on the streets of the town, as well as giving private service to the citizens. The revenue derived from the latter was at present only a little behind the total expense of running the plant, which was a very complete one valued at $17,000. Mr. Day referred to the difficulty other towns encountered in taking over lighting plants from private ownership and then moved:

"That municipal ownership of electric light plants would be beneficial and in the best interests of the towns in the Maritime Provinces."

The resolution was seconded by Captain Read.

W. S. Fisher, St. John, inquired of Mr. Day what provision was made at Parrsboro for wear and tear, and how they paid interest on their investment.

In reply, Mr. Day stated that they were able to pay about $125 for new equipment last year out of current revenue and the interest on their loan was also charged up to current expenses.

The resolution on being put to the meeting was carried unanimously.

Commercial Reports.

In speaking on this subject (No. 8) C. P. Moore of Sydney explained that even though the Government supplied weekly reports from agents in all parts of the world, yet these were never made prominent in the local press. He would request the press to give a wider publicity to these matters. The people were a little slow in advertising, and should be educated up to it.

He moved :

"Whereas, in the opinion of this Maritime Board of Trade the reports of Canadian commercial agents abroad, as published by the Department of Trade and Commerce, contain much information of value to Canadian manufacturers, to Canadian shippers and dealers in produce; and whereas, these reports constantly present opportunities looking to the advancement of the export trade of the Dominion :

"Resolved, that this Maritime Board of Trade do, and does hereby, request of the Maritime Province press that they publish each week such information as these trade reports may contain relative to Canadian trade and commerce, and that a copy of this resolution be sent to

AUTOMATIC INJECTOR

Penberthy Injectors have a guaranteed range from 22 lbs. low to 150 lbs. high. A lift of 22 feet with a steam pressure at 60 to 80 lbs. The metal used in the manufacture of these machines is the very best that can be had. The mechanical work is done by men experienced in this particular line of work. Penberthy means Perfection in the making of Automatic Injectors.

Some People Want The Best Horse Nails

Some other people are not so particular; If you are one of the "other people," we have a word or two for you, about out "C" brand Horse Nails.

Did you ever stop to think what it is to use a Horse Nail that is cheap—therefore of doubtful quality? It means the same as if the tailor were to use a "cheap" or poor quality of thread to sew clothes with—the work would rip and shortly become a "botch," no matter how good the cloth was.

Horse Nails are made for one purpose only—to hold Horse Shoes on. Nails that will hold the shoes on longest are therefore the best, and of course the cheapest in the long run.

If there was much difference in the price between the best "C" brand Horse Nails, and the cheapest, you might say, "you couldn't afford to pay the price for the best." Let us set you right on this point. A Farrier will use thirty-two nails to shoe a horse. These nails will weigh, taking the average size (number 8), only one-third of a pound. **It would therefore require a difference of three cents a pound, or 75c a box, to affect the result, by reducing the cost of the nails used, one cent! Can't you afford it?**

If you sell Horse Nails at all, sell the best; you can do all your trade with the "C" brand and have satisfied customers always.

The "C" brand commands the largest sale in Canada, and is of one uniform quality and price. Your preference in ordering solicited.

We shall be pleased to execute your orders, if you cannot obtain our "C" brand from your regular dealer on application.

CANADA HORSE NAIL COMPANY

MONTREAL

Established 1865.

each and every newspaper in the Maritime Provinces."

The motion was seconded by W. S. Fisher and carried unanimously, whereupon the convention adjourned until 8 o'clock.

WEDNESDAY EVENING SESSION.

When the delegates reassembled at 8.15 a good attendance of members was present, quite encouraging the hearts of the officers. J. M. Owen, on behalf of the committee, appointed to draft a vote of thanks to the president for his address, read a resolution which the committee had prepared. This was, on motion, adopted by the meeting. President Spinney replied briefly, thanking the delegates for their appreciation.

Steel Ship-building.

This important subject was introduced by J. E. DeWolf, of Halifax. In 1904 the difficulty had been to get a uniform opinion as to what should be the necessary protection, builders above the canals requiring more than those below. At a meeting last March, however, a resolution was drawn up and presented to the Government. Unfortunately the Government had not dealt with the matter. Mr. DeWolf simply desired to reaffirm last year's resolution and to lend the board's support to the memorial presented to the Government. Extracts from the memorial were read by Mr. DeWolf, who expressed a hope that the Government would yet take some action in the matter. He moved:

"That the Maritime Board of Trade reaffirms its resolution of Aug. 18, 1904, in favor of Government assistance to steel shipbuilding, and regrets that the Federal Government did not deal with this important matter during the last session of Parliament.

"Further resolved that this board approves of the memorial presented to the Government at Ottawa, March 23, 1905, by those now engaged or interested in steel shipbuilding and urges that early action be taken by the Government to grant the measure of assistance necessary to secure the resumption of work in the shipyards now idle, and to establish other steel shipbuilding plants in Canada. Also resolved that copies of this resolution attached to copies of resolution of 1904, be sent to all members of the Cabinet, as well as to all Maritime Province members of Parliament, and that each board here represented solicit the support of its representatives at Ottawa toward securing the necessary Government aid."

C. P. Moore, Sydney, seconded the resolution, remarking that Sydney was deeply interested in the question.

E. B. Elderkin, Amherst, said it was not a subject to be passed over lightly, as Canada needed the industry. He held that it was on just such a subject as this that the board should take energetic action. Pressure should be applied and pressure was needed to secure prompt action on the part of the Government. He did not see why the Provinces should not take the same position in steel shipbuilding as they used to in wooden shipbuilding.

J. E. DeWolf thanked Mr. Elderkin for his support and said that the Halifax Board did not intend to let the matter drop until it was settled.

Senator Ross felt that with unanimity and pressure the matter would receive better attention at next session. The Ministers had many weighty matters to consider at last session.

Father Burke recalled seeing Mr. Fielding at Ottawa soon after the delegation of manufacturers interviewed the Government and at that time the Minister was strongly in favor of helping the industry. Possibly it was for the reason given by the Senator that no action was taken.

Speaking for St. John, W. S. Fisher, explained what that city had done in helping on the matter. He believed much of the work of the board was useless, because it was never followed up, and advocated the sending of delegations to the capital. He admitted difficulties in making up delegations, but felt that obstacles were not insuperable. He felt that the time was now most opportune for the men of the Provinces to make demands for those things they needed for their development.

W. S. Fisher, St. John, N.B.
1st Vice-President Maritime Board of Trade, 1905-06.

M. G. DeWolfe said that with such speakers as Mr. Fisher on a delegation success would be undoubted. But the Provinces had many champions at Ottawa, and yet why was it necessary to reaffirm year after year resolutions on vital matters. He could not understand it, and believed a good strong delegation might do some good.

Captain Read pictured conditions today and contrasted them with conditions a few years ago.

W. H. Roach of Windsor feared the resolution would be side-tracked again, and hoped that a delegation would be sent to Ottawa who would present such resolutions as were deemed important enough. He advocated a committee of three, one from each Province, who would deal with these questions.

E. B. Elderkin thought the matter should be crystallized immediately and a determined lobby be begun at Ottawa.

The resolution was then put to the meeting and carried unanimously.

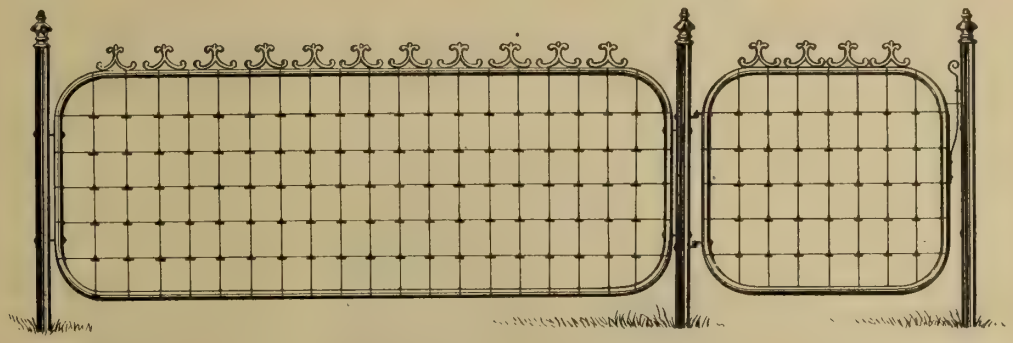
P. E. I. Transportation.

Father Burke introduced the vital question of communication between Prince Edward Island and the mainland. After thanking the board for the opportunity of presenting the subject, Father Burke proceeded to discuss the proposed tunnel. The question of communication was constantly to the fore. The people of Prince Edward Island would not desert the project until it was accomplished. Support was being received from many boards of trade in Canada.

Father Burke pointed out that Confederation was discussed in Prince Edward Island as early as 1864. The Province, however, did not enter Confederation in 1867, holding off until conditions should be made favorable for them. Efforts were made time and again to get Prince Edward Island into Confederation. Sir George Cartier finally made a promise to give the Island adequate communication, and the Island Province joined the Dominion. The terms of Confederation called for a daily steam communication with the mainland. These terms have never been carried out, and it now became the duty of all Canadians to see that they should be. Father Burke trusted the Maritime Board would lend its support to the agitation.

He traced the methods of communication since Confederation, all of which have been inadequate. Last Winter the Island was cut off for 59 days, and in other years for even longer periods the Island had been isolated. Some other means than navigation must be adopted. No one believed that continuous communication could be kept up by navigation. One permanent system of communication must be secuced, and that could only be secured by a tunnel under Northumberland Straits.

The project was not impossible. The distance was only 6½ miles, and conditions were such as to make the work of construction very easy. This project of a tunnel had been before the people for twenty years. Famous geologists had found the strata under the straits most favorable for tunneling. Shale and clay existed there, and there would be little percolation of water. The tunnel, said Father Burke, could be built in five years at a cost not exceeding $10,000,000. M. J. Haney of Toronto had offered to undertake the work for that price and to hand over the complete tunnel in 6 years. American contractors were eager to build the tunnel as a private venture.



Father Burke believed the payment of $300,000 a year interest would more than be justified in comparison with the present expenditure on ships. These cost annually $100,000 for depreciation, $100,000 for insurance, and the Prince Edward Island Railway lost $100,000 of business every year because it lacked a connection with the mainland. Accordingly Father Burke moved:

"Whereas, the Province of Prince Edward Island entered the Canadian Confederation under specific terms as to continuous communication; and, whereas, such communication has not to this day been accorded to her; and, whereas,

WIRE FENCING

And Why Ours is Best

We are the only Wire Fence Company in the Maritime Provinces manufacturing fencing. We are thus able to offer better values than any other company. We use only the highest grade of wire—High Carbon for all laterals, Hard Steel for all verticals. This is specially galvanized, at extra expense to us, to resist rust. So ***The Strathy Hinge Stay Fence*** and ***The Maritime Stiff Stay Fence*** for farms and railroads are the most perfect

fences made. We also manufacture a variety of Ornamental Fences, characterized for neatness, durability and strength. Coiled Spring Fence Wire, Galvanized and Bright Fence Staples, All Steel Gates, plain and ornamental. We can supply ***you*** with fencing that sells. Write for catalogue, circulars and price lists ***to-day.***

NEW BRUNSWICK WIRE FENCE CO., Limited

MONCTON, N.B.

much loss and very great hardship is occasioned to her yearly in the Winter season especially, owing to the want of permanent communication, her natural progress and the extension of interprovincial trade being thereby greatly hampered and handicapped; and, whereas, no Province of Canada, irrespective of size or population, should be without at least one permanent and efficient system of communication, provided it can be afforded by the reasonable expenditure of public money, since such system is essential to the intercourse of the the different parts of the Federation and lends greatly to up-build and consolidate them; therefore,

"Resolved, that this Maritime Board of Trade in annual convention assembled request, and does hereby urgently request, the Federal Government to complete the terms of Confederation with Prince Edward Island by the construction and operation as soon as possible of a railway tunnel under the Straits of Northumberland, the only sure, permanent and adequate system of communication available; and, further resolved, that the system of navigation in vogue, pending the construction of the tunnel, be made as perfect as may be, the new ice-breaking steamer to be built being equipped with all the modern improvements for such vessels, and by employing one of the fleet of ice-breakers on what is known as the western route."

Captain Read, in seconding the motion, gave some practical information about tunnels, referring to tunnels in London, railway tunnels under rivers, where ferries used to run, and tunnels where bridges stood. He pointed out the heavy freight rates between the Island and Halifax, and the frequent handling of freight. If direct rail communication could be secured, values in the Island would go up immensely. Then, too, the tunnel was as necessary in Summer as in Winter.

The resolution, on being put to the meeting, was carried unanimously.

THURSDAY MORNING SESSION.

A. M. Bell brought up the subject referred to on the preceding day—the neglect to follow up resolutions by the board—and introduced the following motion:

"That on the request of any board of trade in the Maritime Provinces, the president, or in his absence one of the vice-presidents, may appoint one or more delegates to represent the Maritime Board in any matter which has been favorably passed on by this board at any of its meetings, provided that if such delegate should not be immediately interested in the matter to be presented, his expenses shall be paid by the local board making the request."

Father Burke believed there should be a permanent committee to follow up resolutions. He suggested three men from each Province.

E. B. Elderkin seconded the resolution but believed a standing committee of one man from each Province, one of

whom should be the president of the board, would be a good arrangement.

W. S. Fisher outlined a plan for a permanent committee, consisting of three men from each Province. The president and the two vice-presidents would be the senior members of the committee, and would be supported by two men from each Province.

The discussion was continued by M. G. DeWolfe, Senator Ross, and several other members.

Alex. Stephen considered a committee of three too small. He advocated a larger deputation, who would convince the Government that the Maritime Board meant business. He thought the delegation should be appointed immediately.

Father Burke, having consulted with Mr. Bell, introduced a revised resolution covering both suggestions. The following prefix was added to the original resolution :

"That a permanent committee on resolutions, composed of three members from each Maritime Province, the three presidents being members ex officio, be appointed to carry on resolutions to the sources affected and further resolved."

W. S. Fisher objected to the sending of local delegations.

J. M. Owen explained how cases would arise when local matters would have to be considered and local boards would have to take action. He believed the resolution was satisfactory.

A. M. Bell considered that the resolution should be made as elastic as possible.

The revised resolution, being put to the meeting, was now carried unanimously.

Steamship Service.

On behalf of the West Prince Board, John Agnew introduced the subject of a steamship service for the northern ports of Prince Edward Island. At present a few schooners do the trade, but a good steamship would be most beneficial. He moved :

"That the resolution passed at Moncton last yaer, with reference to steamship communication between Sydney, north ports of Prince Edward Island and the Magdalen Islands and Miramichi, be, and is hereby, reaffirmed."

S. P. Challoner seconded the motion on behalf of Sydney Board, believing such a service would be of considerable advantage to Cape Breton Island.

James Nichol, speaking for the Miramichi District, pointed out the advantages his section would derive from this service.

The question was put and carried.

Maritime Union.

W. S. Fisher regretted that the St. John member, who had proposed the subject, was unable to be present.

Speaking for Amherst, E. B. Elderkin said he was in much the same position as Mr. Fisher. He had no resolution to offer.

J. E. DeWolf suggested a large committee to draft a resolution, as the matter was most important.

M. G. DeWolfe saw no reason for putting off the settlement of the question. It had been put off at Moncton, and should not be put off again. He read the 1303 resolution introduced at Charlottetown, and suggested passing it this year.

A. M. Bell moved that the consideration of the question be deferred, and a committee of three be appointed to draft a resolution.

Mr. Fisher seconded the motion which was carried. A committee consisting of W. E. Porter, Captain Read and W. S. Fisher was appointed.

I. C. R. Diversion.

In the absence of Mr. Day, of Parrsboro, E. B. Elderkin introduced the resolution of the Parrsboro Board. At present the road from Moncton to Truro was over-taxed. A loop by Parrsboro would be only slightly longer and the grades less steep. Either the present road would have to be double-tracked or a new loop be built. The former alternative was not a wise one. He accordingly moved :

"That this board press upon the Government of Canada the importance of constructing a loop on the I.C.R. between Amherst and Athol to a point on the I.C.R. at or near Truro, and urge the said Government to immediately hold a survey of the proposed route to locate a line with a view to constructing the same."

A. M. Bell,
2nd Vice-President Maritime Board of Trade.

Inland Fisheries.

A. M. Bell brought forward a resolution on this subject as follows:

"Resolved, that the Government of Canada be requested to ascertain by scientific investigation what measures are necessary to restore and protect our inland fisheries. That having obtained this report, it should be published and distributed as widely as possible, to the end that public opinion regarding this question may universally be aroused; and that subsequently such measures may be adopted as may be found to be desirable and practical in the light of the report and the discussion which may follow its circulation."

Mr. Bell, continuing, said the matter was not sectional, nor should it be approached from the sportsman's standpoint. He believed Nova Scotia was the natural nursery for fish, being one-fifth covered with water. He understood the Government had appointed a large number of inspectors at small salaries, who did not do their work properly. There should be proper protection. If the fisheries were only protected, sportsmen would come to the Province and spend their money there.

J. M. Owen seconded the resolution. He believed the game wardens were not paid enough. He cited instances of infractions of the law and explained how the Nova Scotia fisheries were being destroyed. He advocated a permanent commission, believing the present system quite inadequate.

Senator Ross pointed out that there were laws, but they were not enforced. Complaints were made, but the culprits were never prosecuted. He thought if outsiders were appointed inspectors, there might be some improvement.

J. E. DeWolf asked why culprits were not interfered with,—simply because the game warden didn't like to accuse his neighbors and for political reasons. Even the wardens broke the law. He thought the resolution did not go far enough.

Several other speakers discussed the question, which was unanimously carried.

Chairman Spinney appointed the following committee: W. S. Fisher, E. H. Armstrong, Father Burke, Alex. Stehpen and M. G. DeWolfe, to nominate the officers and select a place of meeting for next year.

Better Steamship Service.

W. S. Fisher introduced the subject (No. 16). He thought there was no doubt there should be a better service across the Bay, to give access to the west. He moved:

"That this board reaffirm its position with reference to the desirability of securing a daily steamship service between New Brunswick and Nova Scoria via St. John and Digby, and that the incoming executive be requested to again bring the matter before the Federal Government with an urgent request that this service be provided at the earliest possible date."

Continuing, he remarked that some doubts had been expressed on the possibility of keeping up a daily service. He felt, however, that there might be considerable improvement.

The resolution was seconded by C. Jamieson, who said the difficulty was to get the company to give a better service for a larger subsidy.

J. M. Owen considered the resolution did not go far enough and thought a service to Annapolis could be instituted as well. He desired to have Annapolis added to the resolution.

President Spinney believed he was the originator of the movement. From the business standpoint, freight service to Western Nova Scotia was very inadequate in Winter. The matter had been discussed at Ottawa with the Minister of Commerce and should be prosecuted until it was an accomplished fact.

The question was put and carried.

THURSDAY AFTERNOON SESSION.

A Pleasant Drive.

No sooner had luncheon been disposed of than the delegates were taken in hand by the Yarmouth Board and given a drive of an hour's duration about the town. The perfect weather, the smart turnouts and the genial hosts made the drive an ideal one, and on every hand exclamations of admiration were heard at the beauties of Yarmouth. The residences in the town are of substantial build and attractive architecture and are surrounded with broad lawns, gardens

and hedges. The latter are the pride of the citizens of Yarmouth, and well deserve all the encomiums that were bestowed on them.

About 3.30 the convention reassembled and business was resumed.

Abolition of Statute Labor.

R. W. Starr, of Wolfville, introduced the subject. He explained that he was not the member selected to take up this matter and consequently had no resolution to offer. However, he believed it to be a subject worthy of discussion. He contended that it was better to employ skilled labor than to force every man to perform his share. It was an antiquated law and required amendment. So far as good roads were concerned everybody wanted them, but few knew how to get them. He thought that the money now being laid out on statute labor could be employed to much better advantage in securing good roads.

Captain Read suggested framing a resolution from the words of the subject on the programme, which was accepted by Mr. Starr. The latter accordingly moved:

"That the Maritime Board of Trade urge upon the Governments of New Brunswick, Nova Scotia and Prince Edward Island the importance of improvement in the common roads of the Provinces and to take steps to diffuse information on the subject, especially by the distribution of literature and the appointing of an official who shall confer with the county councils and lecture on the subject in the various communities throughout his Province; and further, that statute labor in Nova Scotia be abolished."

Captain Read seconded the resolution, explaining conditions in Prince Edward Island, where statute labor was abolished five years ago. A poll tax was now in force to make up for the deficiency. Under the present conditions, it did not take any more money out of the treasury now than when statute labor was in force. He explained the system in force at some length. With regard to advocating good roads, he referred to the literature issued by the good roads associations in Ontario.

The resolution was put to the meeting and carried.

Recoinage.

H. C. Tilley, St. John, introduced the following resolution:

"That in the opinion of the Maritime Board of Trade, Canadian worn silver coins should be redeemed by the Government, because,

"(1) The Government have received full face value for the coins; have made a very large profit out of their issue (on present issues the profit being about one hundred per cent.), and can reproduce from worn coins, coins of full weight at a comparatively slight expense;

"(2) Coins pass from the current to the uncurrent stage imperceptibly, and the circulation of worn coins, when not redeemable, induces a large amount of small deceit in the passing of the coins and lowers the public opinion of Governmental management;

"(3) Great Britain and the United States redeem at the face and recoin their worn silver coins."

Speaking on this resolution, Mr. Tilley felt that there was a great deal of deception practised, which should not be allowed. He cited instances where coins were passed off for higher values than they were worth.

The motion was seconded by W. S. Fisher, St. John, in a brief speech. The St. John Board had recently passed a resolution on the subject at the instance of the Toronto Board. The proposition was a very fair one and should be adopted by the Government.

C. Jamieson brought up the resolution of the Digby Board on the subject of deporting Newfoundland 20-cent pieces and asked that it be added to the resolution before the meeting. This resolution read: "Resolved, that in the opinion of this board, the Government of Canada should deport alien silver specie of the denomination of 20 cents and call in the present Confederation silver of that denomination."

This was agreed to by Mr. Tilley and the question was put and carried.

Maritime Union.

W. S. Fisher reported for the committee appointed at the morning session, and introduced a resolution to the effect,

"That in the opinion of this board the time has arrived for a union of the three Provinces of New Brunswick, Nova Scotia and Prince Edward Island, and that a memorial to this effect be forwarded to each of the Governments and that they be urged to arrange for a meeting of representatives from each Government at an early date."

C. M. Creed, Halifax, N.S.
Secretary Maritime Board of Trade.

One idea brought forward by Mr Fisher was the growing power of the west, compared with the small growth of the Maritime Provinces. The question was what should be done to maintain the balance of power. The Provinces had helped in the development of the west and were now waiting for some share in the benefit. So far they had been somewhat disappointed. The great need was summed up in the one word "transportation." Better facilities for exporting the products of the west were needed. To nationalize the ports, to make them easy of access, and to improve means of traffic were the objects to be aimed at. When it was realized that for six months of the year the Provinces were the sole exits for Canadian goods, the position was stronger than was thought. In union there was strength, and possibly in a union there would be greater possibilities for securing what the Provinces needed.

A. M. Bell seconded the resolution. He felt that the matter would be fully discussed and believed an economy in government would be secured by a union.

Senator Ross considered the matter of supreme importance. What was needed was to educate public opinion. He thought the three Premiers and their Attorney-Generals should come together and formulate a plan of union, which might be put before the people.

Speaking for the Island, Captain Read was sure the people would need education before they would come into a union, though the feeling would be different if the tunnel were built.

E. B. Elderkin felt the matter was impracticable. The Provinces could not be brought together. He referred to the fact that in Prince Edward Island the tax rate was 2 mills. In uniting with Nova Scotia they would be subject to a far higher tax. He did not see how a union would give greater influence. It would reduce the number of members at Ottawa. He felt that the three Governments with all their machinery had more power and that the Provinces were fairly well treated.

Jas. Nichol realized how foolish it was to have three Parliaments for a population of 800,000, but failed to see how a union could be arranged. Some years ago it would have been easier, before the Parliament Buildings at Fredericton were built. On behalf of the people of New Brunswick, he invited the Nova Scotians to come to Fredericton and make it the capital of the united Provinces.

M. G. DeWolfe produced and read a number of newspaper clippings illustrating public opinion on the question and showing how desirable union was. He believed that the young men of the Provinces would feel prouder if they belonged to a larger portion of the Dominion and would be inclined to remain in the country.

Mayor Armstrong felt that the day for a union of the Provinces was passed in 1867, and that the difficulties were now almost insurmountable. He held that moral suasion should be employed now and later on something might be done. He did not see how there would be any more influence exerted at Ottawa if there were a union than if there were not. More good would be done by a union of the business men of the Provinces in such business unions as the Maritime Board than by legislative unions.

Captain Read deprecated the idea that there would be no greater influence at Ottawa if there were a union. At present the members from the Island exert little influence, but as members from a Maritime Province they would have a still greater influence.

In reply, Mayor Armstrong said that on all general questions the members from the Matitime Provinces stood together.

The resolution was carried with a few dissenting voices, and the meeting adjourned.

THURSDAY EVENING SESSION.

At 8.15 the chairman called the meeting to order and J. E. DeWolf presented a resolution to the effect that the Maritime Board of Trade memorialize the Government to appoint a third member

on the Dominion Transportation Commission from the Maritime Provinces.

E. B. Elderkin seconded the motion, commenting on the lack of energy in the Provinces in pressing their claims. The motion was put and carried.

Sydney and Halifax Service.

S. P. Challoner of Sydney introduced the subject of a night service from Sydney to Halifax. It was not a local question as some might suppose. Sydney was a great mining and industrial proposition, with several most important industries. It had consequently a direct interest for all the towns and cities of the Provinces. At present there are two trains out of Sydney, leaving at 7 o'clock and 1 o'clock, one of which was not satisfactory for mails or for travel because of poor connections.

Mr. Challoner outlined how mails go and come from Sydney, showing the length of time consumed. Sydney and its neighboring towns did not ask for a third train, but wanted the one o'clock train removed and a night train substituted. Such a night train would facilitate travel immensely in all directions, and give an improved mail and passenger service.

The resolution presented by Mr. Challoner read that :

"Whereas, the inaugurating of a night express train service between Sydney and Halifax must prove of very great advantage to the business men of the Maritime Provinces, and a benefit to interprovincial trade interests generally ;

"And, whereas, such a service would admit of the best possible through connection by rail and water for all points west of Truro, Halifax and Yarmouth ;

"And, whereas, a night express train between these points would mean a great saving of time to travelers going both east and west ;

"And, whereas, such a service would stimulate tourist traffic to this Province :

"Therefore, resolved that this Maritime Board of Trade do urge upon the Department of Railways that a night express train service between Sydney and Halifax be put into operation at the earliest possible moment, and that a copy of this resolution be sent to all of the Federal representatives for the Maritime Provinces, to the Minister of Railways, and to the several civic corporations throughout these Provinces."

The resolution was seconded by Alex. Stephens of Halifax. It was simply a question of justice to Cape Breton. Today the island was in a position to demand such a concession. Sydney had all the elements to make a great city and it was being built up rapidly. In the district other cities were growing up, and the place was entitled to consideration.

The resolution was passed without further discussion.

Federation With West Indies.

The subject was introduced by E. B. Elderkin of Amherst, who claimed the matter was of the utmost importance to the Maritime Provinces and the whole Dominion. The day must be looked forward to when Canada would be a mighty nation, and it was time to round off Canada with possessions which would supply wants not to be supplied inside the Dominion. He believed the British West Indies would be willing to enter a confederacy with Canada. Neither Canada nor the Indies produced similar products, and an interchange of products would be of mutual advantage. If Canada did not take in the Indies, the opportunity would pass and the latter would join the United States. By taking in the Indies the importance of the Maritime Provinces would be increased. The ports of the Provinces would be the gateways for the passage of all Canadian products for the West Indian Islands. He moved that :

"The Maritime Board of Trade at Yarmouth in annual session convened, respectfully ask the Federal Government to take such action in the premises as will lead to the entrance of the British West India Islands into the Canadian Confederation ;

"Further resolved, the secretary be, and is hereby, instructed to forward this resolution to the members of the Federal Government, and to the members of the Senate and the House of Commons."

The resolution was seconded by W. S. Fisher of St. John. There was a strong desire among the islands to trade with

M. G. DeWolfe, Kentville, N.S.
Auditor Maritime Board of Trade.

Canada, but they had better connections with United States ports. The time was opportune to do something, as they would soon be united with some larger country, and this larger country should be Canada.

W. D. Taunton, Halifax, corroborated the statements made about union sentiment in the islands. Since the adoption of the preferential tariff, the situation had been greatly strengthened. The system of Government was bad and was a heavy tax on the people, so that they would welcome relief by joining the Dominion.

J. E. DeWolf pointed out that the United States were monopolizing trade between the Philippines and their home ports, and between their West Indian Islands and home ports, and he indicated that trade between Canada and the Indies would be of advantage to the Canadian marine and to Canadian shipbuilding.

The resolution was carried unanimously.

A committee comprising Messrs. Fisher, Elderkin, Taunton and Read, was appointed to draft a memorial along these lines to be presented to the Government. The same committee was empowered to take steps to interest the people of the islands in the subject.

Advertising the Provinces.

Captain Read moved that the board reaffirm the resolution of last year and reappoint the committees then appointed, asking them to make a report at the next meeting of the board.

J. E. DeWolf seconded the motion, which was carcied.

Tourist Travel.

A. W. Eakins of Yarmouth introduced the subject. For several years he had much to do with advertising his part of the Province. He felt that the work was of sufficient importance to merit attention from the Government. Provided 10,000 tourists visited Yarmouth and spent at least $50 each, the benefit to the town would total $500,000. He felt that the most effective plan which the Government could adopt would be to employ two or three experts to write up illustrated accounts of the Provinces to be inserted in the leading American magazines. He accordingly moved :

"That in the opinion of this, the Maritime Board of Trade, the several Legislatures of the Maritime Provinces should take into consideration the expediency of appropriating some reasonably large sum of money and expending it in a comprehensive and systematic plan of publicity in the direction mentioned, or in assisting the several local associations which are organized for the purpose of promoting tourist travel."

The motion was seconded by M. G. DeWolfe, who realized that the local efforts made by the various boards of trade were inadequate and should be supplemented by Government aid. He further hoped that better hotels and boarding houses would be opened, better conveyances provided, and no overcharging indulged in. He read a letter from a gentleman in Dublin, in reply to his article in the 1905 Export Number of The Canadian Grocer, showing how little the Provinces were known. Advertising was the great remedy for this defect.

The discussion was continued by Senator Ross, W. S. Fisher, John Agnew, S. P. Challoner, and some others, and the resolution was passed unanimously.

New Officers.

Father Burke reported for the nominating committee, naming the following officers :

President—Capt. Read, Summerside.
1st Vice-President—W. S. Fisher, St. John.
2nd Vice-President—A. M. Bell, Halifax.
Per. Sec'y.—C. M. Creed, Halifax.
Auditor—M. G. DeWolfe, Kentville.
Cor. Sec'y.—D. K. Currie, Summerside.

On motion the report was adopted and the chairman introduced the new president to the meeting.

In a brief speech Captain Read thanked the convention for the honor conferred upon him.

Financial Statement.

C. M. Creed now read the financial statement of the association.

Yarmouth, N.S., August 17, 1905.
The Maritime Board of Trade.
In account with Charles M. Creed.
Secretary-Treasurer.

To general expenses, 1905.....		$191 47	
Secretary's salary, 1905.....		175 06	
			$316 47
Credit.			
By Balance on hand, 1904.....		$156 04	
Per captia tax collected, 1905.....	$210 00		
Per captia tax uncollected, 1905....	63 20	273 20	429 24
Balance.....			$112 77

Examined and found correct.
M. G. DeWolfe,
Yarmouth, N.S., August 16, 1905. Auditor.

On motion the report was adopted.

Place of Meeting.

John Agnew invited the board to visit Summerside next year, and moved that Summerside be the next place of meeting. The motion was seconded by Father Burke.

J. E. DeWolf moved that the invitation from the Amherst Board be accepted, on the ground that Amherst was a more central point. The motion was seconded by J. Nichol.

Upon a standing vote being taken, Amherst was selected as the next place of meeting. and E. B. Elderkin thanked the board for their acceptance of the Amherst Board's invitation.

Father Burke moved that the thanks of the board be extended to the retiring president of the board, to the officers of the Yarmouth Board, and to all others who had assisted in making the present meeting a success, including the press and the mayor and council of Yarmouth.

The motion was seconded by Senator Ross and carried unanimously.

Speeches followed from E. K. Spinney, who replied both for himself and the press and Mayor Armstrong, after which President Read announced the names of the permanent committee to act as a delegation for the board when necessary, as follows: E. K. Spinney, Yarmouth; W. M. Jarvis, St. John; Father Burke, Alberton; J. E. DeWolf, Halifax; J. Nichol, Chatham; S. N. Rattenbury, Charlottetown; G. A. R. Rollings, Sydney; J. Robinson, Moncton; A. P. Prouse, Murray Harbor.

The meeting concluded with the singing of the "National Anthem."

SOME YARMOUTH CHICKENS.

Room 109 !

* * *

Who said Yarmouth was a dry town ?

* * *

B. H. Dodge, M.P.P., kept the fun going every time he rose to speak.

* * *

Past President Spinney is a capital entertainer, and he had everything just right—except the rain.

* * *

References to the presence of the representatives of the MacLean Publishing Co. were greeted with applause. Thanks!

* * *

There's a nice Whist Club in Yarmouth, and through President Spinney's kindness some of the delegates were entertained there.

* * *

Secretary Creed was given a splendid opportunity to sing a song for the crowd at the opening session, but he failed to rise to the occasion.

* * *

"May I ask the mover of the resolution," said Captain Read, "if he means three drills a year for the boys or a drill for three years ?" (Laughter).

* * *

"I'm the old man yet," said "Charlev" Creed amid wild applause as he thanked the convention for re-appointing him to the secretaryship.

* * *

M. G. DeWolfe was rather taken back when his remark that the members at Ottawa didn't get much of a reward for their services was greeted with laughter.

Senator Ross told with great glee about his present of a 20-year-old bottle of Scotch last Christmas. He kept it until March 24. when he celebrated his golden wedding with it.

* * *

Father Burke is Witty.

"When it comes to advertising this tunnel we may be accused of being like the fussy man who was traveling some distance on the railroad. He had a trunk in the baggage car, and every stop the train made he would rush into the car to see that the trunk was there. Finally the irritated baggage-man called out to him, 'I wish you were an elephant instead of an ass, and then you'd always have your trunk with you.' "

Headquarters of Pickford & Black Steamship Line, Halifax.

Senator Ross was an apologist for the Government whenever an accusation of neglect came up. His expression, "wearied with their long labors at Ottawa," evoked much comment.

* * *

Special thanks were tendered the MacLean Publishing Co. for the attention they paid to the proceedings of the board. The company had three representatives this year at Yarmouth.

* * *

The Grand Hotel came in for many compliments. M. G. DeWolfe said it only lacked an elevator and elevators. Another delegate claimed it was the best hotel in the Provinces.

Senator Ross' Sympathy.

"The way I feel towards Prince Edward Island is something like the way the Irish M.P. felt in London, when he encountered one night a big man lying in a gutter. 'My man,' said he, 'I wish I could help you up, but I can't; so I'll just lie down beside you and keep you company.' "

Captain Read Tells One.

"Tunnels are so common in England that people there wonder there are so few in Canada. Why, when they were building the C.P.R. across the prairie, an Englishman came along and on seeing the work of construction exclaimed: 'I don't see how you can ever put this railway through; there won't be any tunnels !' "

The Amherst Foundry Company, Limited

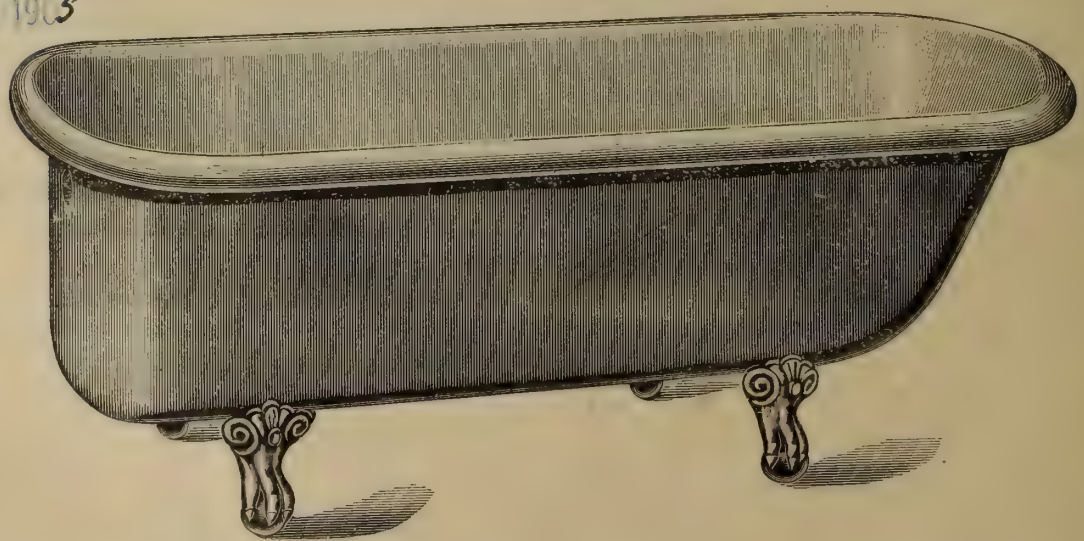
MANUFACTURERS OF

Porcelain Enameled Baths, Lavatories, Sinks, etc., etc.

RETURNED
SEP 20 1905
To Owner
Cut Book 40
page 53

Below we give some of the reasons why you should use the "Beaver" brand of enameled goods:

1st. **Because they are "Made in Canada."**



2nd. **Because the greatest care is used in the selection of the iron from which the castings are made.**

3rd. **Because the ingredients of which the enamel is made are all selected by us on account of their absolute purity and high quality without regard to price.**

4th. **Because all the work on these goods, from mouldings to enameling, is done by skilled workmen, many of whom are experts in their line of work.**

RETURNED
SEP 20 1905

Be sure and get the "Beaver" brand and you will not be disappointed.

We also manufacture Stoves, Ranges, and the celebrated "Improved Cumberland Hot Air Furnaces."

SUGGESTED BY CONVENTION.

THE Maritime Board of Trade, whose proceedings are fully reported in this issue of The Canadian Grocer, is a unique organization, a business man's voluntary parliament, where matters of interest, local, Provincial and National, are discussed with a refreshing frankness, and to which the student of current thought may turn with confidence for a trustworthy index of Maritime opinion.

The impression is received from attending the meetings of the board that the members are very much in earnest, and a laudable enthusiasm for the advancement of the interests of the east is everywhere apparent. If open to criticism upon any point it is on a perhaps natural tendency to consider matters of purely local interest of greater National importance than their sister Provinces may be disposed to admit, and a desire to shoulder the financing of these local projects upon the Federal Government.

These matters are, however, incidental and the questions of larger interest were handled in a manner that would have reflected credit upon a parliament whose members were under the fine stimulus of an adequate indemnity.

* * *

A fast mail service is one of the questions discussed of general interest. It is, indeed, little creditable that in spite of our present subsidies, 564,000 pounds of Canada's Atlantic mail matter had been conveyed in 1903 via New York, while only 147,000 pounds, largely parcel post, via Canadian ports. The demand for first-class service in return for future subsidies was well advised.

* * *

The proposition for a union of the three Eastern Provinces, endorsed by the convention, was a step in the right direction, and if local interests can be overcome the east would gain in strength and solidarity. Economies of administration and a better choice of public men could be secured.

* * *

The resolution dealing with the placing of the Intercolonial Railway under a commission was, unfortunately, not discussed. There are many in Central Canada who are of the opinion that such a move would result in placing the Intercolonial on a paying basis. The views of those most directly concerned would be interesting.

* * *

The resolution passed a year ago, calling on the Government to afford protection necessary to encourage the building of steel ships, was reaffirmed, and it is to be hoped that in the tariff revision, so long promised, this important matter will receive due and sympathetic consideration.

* * *

The rounding off of Confederation by the inclusion of Newfoundland and the West Indies, endorsed by the convention, affords food for thought. As to Newfoundland there is little question in the minds of Canadians generally and the Government could increase its prestige in no more signal manner than by the realization of this project. The inclusion of the West Indies is a matter that has been given less thought. The idea is almost Imperial in its scope, and is extremely seductive. The fact that our Maritime friends, who are best acquainted with the conditions in the Island, have so enthusiastically endorsed the idea argues for its feasibility. May the day hasten when we can speak of our Canadian Dominions beyond the sea.

BRITISH REPRESENTATION BEFORE TARIFF COMMISSION?

ADDITIONAL interest is lent to the approaching sessions of the Dominion Tariff Commission by the possibility of British chambers of commerce sending representatives to secure a hearing before the commissioners.

This plan has been suggested by Mr. Edward Porritt, who recently toured Canada as a special correspondent of Commercial Intelligence. His first letter on his return to England referred to this point and justified the idea, treating the Canadian Manufacturers' excursion as a kind of precedent for British participation in fashioning the commercial policy of Canada.

COMMERCIAL TRAVELERS PROTEST.

AT a meeting held in the Windsor Hotel, Montreal, last week, delegates representing the various Commercial Travelers' Associations in Canada passed a series of resolutions condemning the $300 tax imposed by the Quebec Government on non-resident commercial travelers representing foreign houses.

The subject was discussed at great length, and a rerolution, moved by Mr. John Horne, president of the Northwest Commercial Travelers' Association, and seconded by Mr. J. L. Hetherington, president of the Maritime Commercial Travelers' Association, was unanimously carried by the meeting. The resolution, copies of which will be sent to Sir Richard Cartwright, Minister of Trade and Commerce, and to Sir Wilfrid Laurier, was as follows:

"This meeting of the representatives of the Commercial Travelers' Associations of Canada unanimously resolves that the legislation enacted by three of the Provinces placing a tax on commercial travelers is detrimental to the large commercial interests which they represent. The legislation also appears to us contrary to the spirit of Confederation, it being in restraint of that freedom of trade and commerce which is so essential between the various Provinces of our Dominion. We would, therefore, at this joint meeting, again place ourselves on record as decidedly opposed to this legislation, and in the continued hope and expectation that his Majesty's Government of the Dominion will not permit such legislation to remain on the statute book of any of the Provinces."

Other business transacted by the delegates included a discussion, with members of the Eastern Passenger Association, of existing arrangements, and possible changes. It was mutually agreed that no immediate changes should be made.

The associations represented at the conference included the Dominion Commercial Travelers' Association, Commercial Travelers' Association of Canada, Maritime Commercial Travelers' Association, Western Ontario Commercial Travelers' Association, and Northwest Commercial Travelers' Association.

As a result of this and other protests, notably those from British chambers of commerce, it is now understood that the Federal Government will take up the

matter and probably exercise its prerogative to quash, or at any rate, to modify the obnoxious bill.

CANADIAN NICKEL FOR INDIAN COINS.

IT has often been asserted that Canadians never awaken to their own possibilities until they have been aroused by some other nation stepping in to take advantage of them. In this way, American syndicates have developed many of our best resources; and now, again, another country is reminding Canadians of a use for one of our most typical products.

Col. Geoffrey M. Porter, master of the mint at Calcutta, India, has for some time been touring North America, visiting its mineral mines and money-manufacturing institutions. His visit has been brought about by the decision of the Indian authorities to adopt a more sanitary coinage, as it has been found that the hot climate of that country soon corrodes the copper and renders it dirty and unsanitary. Accordingly, India recently authorized the adoption of pure nickel for coins of small value, both for sanitary reasons and for the fact that the brightness of the new coinage will catch the fancy of the native population. Col. Porter has been visiting the nickel mines of Sudbury to make sure of a reasonable rate on the metal for years to come. Canadian nickel will now be extensively used in coining the Indian anna—which is worth about a penny.

In connection with Col. Porter's visit to our country, some interesting facts have developed. Few Canadians knew before that the Sudbury district turns out fully one-half of the world's nickel product; yet such is the case. It has also been learned that some European countries are already using the pure nickel coins, among them being France, Italy, Austria-Hungary, and Switzerland.

The question now arises, why Canada should not coin her cents in pure nickel? There are few who will admire the appearance of our clumsy "coppers," and they are notoriously unpopular freight, even in a poor man's pocket. In the light of the paramount position which Canada holds among the nickel-producing countries of the world, it would seem very proper to nationalize our currency, by following the example of India, and replacing our "coppers" with pure nickel coins.

DO WE WANT THE METRIC SYSTEM ?

AS matters now stand, despite the bitter opposition on the part of those opposed to it, the adoption of the metric system in the United Kingdom seems assured. For some years a strenuous warfare has been carried on between the Decimal Association, who have been making every effort to educate people as to the merits of the decimal system and to make it compulsory by law, and the British Association of Weights and Measures, whose aim and object is the preservation of the present standards. Whole volumes were written by both parties with arguments for and against. The Decimal Association and its supporters, with Lord Kelvin as one of its most active workers, has got well in the lead. A bill to render the metric system compulsory in Great Britain has passed the House of Lords and is now before the Commons. A circular issued by the Decimal Association states that more than 330 members are pledged to its support and every effort will be made to carry the bill through.

While we believe that the metric system possesses advantages above the present standards sufficient to warrant its general acceptance, and that it is merely a matter of a few years before its use will become almost universal, the change will involve an enormous expenditure of time and money.

A SPECIAL INVITATION.

We extend to our readers a hearty invitation to visit our Toronto offices and make themselves at home during the National Exposition. Our staff will be entirely at your disposal and will be glad to give you any information desired. Remember, we are always

AT YOUR SERVICE.

Such a change would affect the manufacturers of machinery and machine tools more than any other class, necessitating the re-designing of all tools and a large amount of the apparatus at present employed. We would like to hear an expression of opinion from some of our Canadian manufacturers as to whether or not you would like to see the metric system adopted in Canada, and if so, how long before you would be in a position to put it into operation.

A CANADIAN COPPER REFINERY.

MOST Canadians think that the products of their numerous copper mines, after going through the smelters, must go abroad to be refined; but this is only partially true. There is one refinery in Canada, operated by the Montreal Copper Co., which is associated with the Syracuse Smelting Works of Montreal. This company now have a ten-ton-a-day plant in operation and, although still in their infancy, they have already been able to compete with the United States copper trust.

To a Hardware and Metal representative, Mr. Louis Sapery, the manager, explained that the company are refining all kinds of copper-bearing material into ingot casting copper. As yet, however, the plant is insufficient to extract gold and silver from the higher grades of the virgin metal, and the only copper matte refined is that which contains merely a small percentage of the metals named.

It is interesting to note that the company have recently shipped 100,000 lbs. of copper to Hong Kong, where it will be used in making Chinese coins. Another 50,000 lbs. are being shipped to Antwerp, Belgium, where they will be transferred to Germany. Early next week, an order of 100,000 lbs. will be sent forward to Watertown, N.Y., to be used by the New York Air Brake Co.

When asked his opinion of the existing scarcity in copper, Mr. Sapery replied that he thought the situation was due to a healthy demand, and that manipulation had little to do with it. If copper goes too high, he predicts that it will be to a great extent superseded by aluminum, which makes an excellent substitute, for electrical purposes, being used by several telegraph lines. The main objection to aluminum, is that it is hard to solder. At present, aluminum is about a half cent higher than copper.

The Montreal Copper Co. have felt the boom in copper, and are working their plant to the fullest capacity. Some large orders have been refused, of late, and there is every evidence that a great deal more will be heard of this company in the future.

PURIFYING DRINKING WATER BY ELECTRICITY.

THE Frankfort News states that it is probable that electric purification of drinking water will soon be introduced into the home. This method, already used by a number of municipal waterworks, is based upon the germ-killing effects of ozone, which is cheaply engendered by electricity. If an electric discharge takes place between two glass tubes, one inside the other, whose surfaces facing each other are coated with metal, ozone is developed in the space between the tubes.

Electricians have tried in recent years to simplify the means of electric ozone development for purifying water. The ideal apparatus would be one which every housekeeper could put up in the kitchen, and by utilizing the electric current of the common electric light wires purify every glass of drinking water. According to the Frankfurter Umschau, such an apparatus seems to

have been successfully made by a French engineer, Mr. Otto.

This apparatus is of very simple construction and takes up little space. It consists principally of a small, closed box, the metal cover of which is made conductory with the bottom. In the box is an ozone developer, an interrupter, and a tin tube. Through the latter the ozone, which first has to pass through a cotton stopper to free it from dust and germs contained in the air, is conducted into the water and mixed therewith. If much ozone has been absorbed, the water becomes phosphorescent in the dark. The most important part of the apparatus is the "mixer," action of which can be interrupted at will. The apparatus is capable of purifying about 60 gallons of water an hour, and the cost per hour is about the same as that of an ordinary electric incandescent light.—U. S. Consular Report, Frankfort, Germany.

IRON ORE IN NOVA SCOTIA.

FOR some time past an interesting discussion has been going on in the Nova Scotia papers as to the existence of large and valuable bodies of iron ore in that Province and the possibilities of still further developing the mining industry. It would seem a peculiar policy for the Government to continue to aid the iron and steel mills in Nova Scotia to produce goods from imported metals if rich ore beds are lying undeveloped within easy reach of the mills. In discussing the question, the Halifax Chronicle says:

"We cannot understand why the very existence of iron ore in commercially productive quantities should be denied in order that an argument against the payment of a bounty should be manufactured. The truth is it is no answer, and the further truth is we have many known deposits abundant in quantity and excellent in quality. Emphasis is laid on the alleged fact that the existing iron manufacturers have searched for ore and found it not. What value can be given to the argument even if it were based on a fact when we reflect that these searches were made on properties owned by others, which the companies named probably could not buy at their own price. At the best, the reports of the iron manufactures could not be considered disinterested under such circumstances.

"As to Torbrook, we have quoted a high authority to prove that ore exists there in very large quantity.

"The Pictou ore fields mentioned belong to the Nova Scotia Steel Co., from which that company for a long time drew their chief supply, and, as we before pointed out, thought them important enough to make them, among other properties, the basis of a security for a bond issue.

"The Londonderry deposits have always been regarded as of the best quality. The aged among us remember that our school books informed us that the iron made from Londonderry ore was equal to the best Swedish iron. Thousands of tons of Londonderry iron have been sold in Canada and elsewhere in competition with the best, and for every purpose for which iron is used. This ore is being mined to-day and the highest quality of iron is being produced."

EMPLOYES' OUTING.

HEREWITH is a photograph of two of the eight street cars furnished by the United Brass Mfg. Co., Cleveland, better known as United-Cleveland, to their employes on July 15th, attending outing given in their behalf, and which outing was a most pleasant affair in every way. Those participating in the outing numbered 700.

United Brass Co.'s Outing.

Various contests were indulged in and at least twenty handsome prizes distributed. Another and also interesting feature attending the outing was the display of bells which have become known throughout the plumbing fraternity as one of the United Brass Mfg. Co.'s unique methods of advertising, and it is needless to say that they attracted considerable attention. Each person also bore a handsome white cap inscribed with the words, "United-Cleveland."

It is a pleasure to know that the most friendly feelings exist between employers and employes, and it is to be hoped that each succeeding event will be marked and attended with as great success as this one.

The bells referred to were exactly the same as those distributed at the recent Atlanta conventon and this company will be glad to send one to any one taking the time and pains of writing for it. It is a souvenir worth having.

DON'T NEGLECT CORRESPONDENCE.

IT would seem as if business correspondence were a thing to be played ducks and drakes with, if one is to judge from the persistent practice of certain Canadian firms of answering trade inquiries when it suits their convenience. It is hard to believe that there are business men in Canada to-day who date their letters twenty or thirty days back regularly for the simple reason that they attend to their correspondence only once a month. Fortunately such extremes are rare, and yet it is to be regretted that our average business man is not above reproach in this regard. Complaints are received continually on the ground that it is practically impossible to communicate with certain Canadian business houses. Whether it is negligence or because such firms feel that they control the situation, and have a right to subject patrons to a maximum of inconvenience, the fact remains that it is short-sighted business policy.

The human element is bound to crop up in all commercial transactions sooner or later, and it is only natural for a man who wants to do business, or to secure trade information, to feel offended when his queries are persistently ignored or shelved until such time as an answer is no longer of service. The disaffection is sure to spread from man to the community, and it is only a matter of time until its reflex action is noticed in a falling off in trade. Not even the poor business man can afford to invite such a catastrophe.

BUILDING AND CONSTRUCTION

BUILDING NOTES.

F. G. England is building a new jewelry store in Regina.

Wm. Bailey will erect a large dwelling on Keith road, Vancouver.

Adams Bros. are going to build a business block in Moosomin.

A $50,000 public school will be erected in the south end of Calgary.

The new factory of H. K. Wampole & Co., Toronto, is progressing well.

Wm. Hendrie, Hamilton, is building a concrete block residence in Hamilton.

Extensive improvements are to be made to the Russell House in Ottawa.

The steel work on the new bridge at Ferry Point, N.W.T., is now completed.

A new railway station is to be built at Charlottetown, P.E.I., for the I.C.R.

Work has been commenced on the new $40,000 normal school at Killarney, Ont.

Work on the $12,000 C.P.R. freight sheds in Moose Jaw has been commenced.

The Brackman -Ker Milling Co. are erecting a large grain tank at Strathcona.

The Canada Permanent Mortgage Co. are going to erect a business block in Regina.

J. M. Griffin & Co. are building a new warehouse on Railway street, St. Thomas.

Work has been commenced on F. M. Griffin & Co.'s new office building in St. Thomas.

The Estevan Grain Co., Estevan, Man., are erecting a new 30,000-bushel elevator.

The new rails on the Pere Marquette have been laid from Cedar Springs to Kemptville.

John McRobert will build a brick dwelling on King street, Hamilton, to cost $1,800.

The contract for the Merchants Bank Building, Brampton, has been let to Mason & Hill.

Wm. Lyal is contemplating the erection of a ten-storey hotel in Winnipeg to cost $750,000.

C. W. Yocum will build a cement block house on Minto avenue, Hamilton, to cost $1,000.

The development of Regina is shown by the great number of new buildings going up there.

Mr. Simpson, contractor, is building a large flat dwelling block on Joseph street, Fort Rouge.

J. H. Harris & Co., Moncton, N.B., are erecting a large new concrete construction warehouse.

The Point Douglas avenue Presbyterian church, Winnipeg, are erecting a new stone and brick church.

Aikins & Pepler are erecting a combined business and apartment block on Osborne street, Winnipeg.

A. F. Anderson & Co., implement dealers, Winnipeg, are erecting a track warehouse on Henry avenue.

R. & J. Poug will erect a $2,000 residence on Robert and Mary streets, Hamilton, for R. Mathewinan.

The contract for the erection of the wholesale fish warehouse of W. J. Guest, Winnipeg, has now been let.

A block of stores and living apartments is to be erected on Logan avenue, Winnipeg, by W. B. Oakley.

E. H. Briggs & Co., broom manufacturers, Winnipeg, will erect a large factory on Henry street this year.

Plans have been prepared for a new G.T.R. station at Brampton. The building will be granite and red brick.

Mr. Kirk Fletcher is having a large cement block residence erected on his farm southwest of Saskatoon, N.W.T.

Plans are under way for the erection of buildings for the construction and repair of cars for the I.C.R. at Moncton.

The Western Commercial Co. have commenced building operations on their property on 20th street in Riversdale, N.W.T.

The following houses are going up in Peterboro, all on Hunter street: E. R. Wood, Dr. Morrison, W. G. Morrow and Robt. Neill.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE James Smart Mfg. Co., Brockville, are installing the Kelsey warm air generators in the following schools : Public School at Elknorn, Man.; Public School at Wawanesa, Man., and the Caroline Street School, Hamilton.

The Ingersoll Nut Co. are building a new factory in Ingersoll.

The large grain elevator of Green Bros., at Harrow, Ont., has been burned.

The Dominion Copper Co., Vancouver, will blow in another idle smelter in a few weeks.

The machinery is being installed in the plant of the Brantford Gas Co., Brantford.

W. A. Inglis has installed a new Gyrator system in his flouring mills at Owen Sound.

The large saw mill at Fay Settlement, N.B., owned by S. McNutt, has been destroyed by fire.

A granite cutting industry has been established at Rock Island, Quebec, by John C. Lacasse.

Sample goods have been turned out by the Brass Foundry at Wallaceburg, and are apparently very satisfactory.

The Nova Scotia Steel & Coal Co., Sydney, N.S., have their blast furnace and open hearth plant in full operation.

Heavy shipments of freight consigned by eastern factories to agents and firms in the Yukon are passing through Winnipeg at present.

Tests are now being made in Victoria, B.C., by Prof. T. S. Lowe, to ascertain whether the Vancouver Island coal is suitable for coke making.

The Canadian Sand and Lime Brick Co., Toronto Junction, have installed their large new engine and boilers in the new works on Syme's road.

The building for the Acheson Graphite Works in Welland is rapidly assuming shape. It is expected the machinery will arrive the first part of October, when operations will soon begin.

A large aerated water factory has just been completed for the Gooderham firm at York Mills, and the installation of the machinery is in progress. It is expected that manufacturing will begin in a few weeks.

The Dominion Government has placed an order with the Dominion Iron and Steel Co. for the supply of 25,000 tons of 80-pound steel rails for use by the Intercolonial Railway. The contract calls for immediate delivery.

The box factory of the British Columbia Box and Lumber Co., Vancouver, has been purchased by J. Hanbury, a prominent Brandon lumberman. Mr. Hanbury is also contemplating the establishing of flour mills and elevators in Vancouver.

J. S. Longhead & Son, Sarnia, Ont., manufacturers of bent woodwork for carriages, sleighs, etc., are adding materially to the handling capacity of their plant. They are erecting new buildings aggregating 800 feet in length for storage purposes for both the raw material and the finished product.

The Canadian Tunnel Co. and the Michigan Tunnel Co., the two companies chartered to build the tunnel under the Detroit River, have combined under the name of the Detroit River Tunnel Co. The new company is capitalized at three millions, a merely nominal one, as the work will cost not less than ten million dollars.

The Brandon Binder Twine Co., Limited, Brandon, have gone out of business, and before the end of September the entire plant will be advertised for sale by tender. The cause of this is the directors not wishing to raise more capital, which would be necessary for the carrying on of the business, because of the forced condition of the binder twine trade.

Companies Incorporated.

The Burns Co., Limited, Oshawa; capital, $20,000; purpose, to manufacture and sell general merchandise; directors, W. J. Burns, A. E. Burns, and F. N. Burns, all of Oshawa.

PAINT, OIL AND BRUSH TRADES

A COAT OF PAINT.

THERE is nothing that will put the finishing touches upon a piece of work, whether it be new or old, like a coat of paint. We see a new building under course of erection. We admire its outlines, its architectural design, so to speak, but there is something lacking. A little later we pass by the same building and lo ! and behold all is changed. The building is complete to every little detail and all because of a coat of paint. It is this same coat of paint that gives a building its picture effect and makes it stand out from those that surround it. It also permits of a harmony between building and site. In fact, the color scheme of a building exterior is just as much a part of an architect's work as the walls or partitions, and in many cases his skill in laying out and planning this color scheme is the secret of his success. Interior no less than exterior decoration plays a very large part in a building. We take a large barren room, that is cheerless and without life so to speak, and the experienced decorator can, with a few strokes of a brush, and the proper tints, change the aspect of the room entirely. It makes room just where room is apparently needed and makes the dark corners smaller or drives them away entirely.

But apart from the picturespue and artistic, paint is an indispensable preservative. In fact this is the primary object of its use. A house built of new lumber, if left exposed to the elements for any length of time without being painted, soon becomes blackened and seamed, and thousands of little water basins are formed that immediately pave the way for decay. On the other hand, if the house receives a coat of paint, the mineral constituents of that preservative immediately enter the grain of the wood, and while enough color is left on the outside to give the desired color effect to the building, by far the larger part of the paint is to be found beneath the surface, enveloping as it were every little destructible particle and prolonging its life tenfold.

The farmer is a large user of paint. His red barn and tasty house adds much to the rural beauty of his community and at the same time brands his farmstead with the insignia of prosperity. When driving through the country, if a house and barn are seen which though large and well built show signs that they have ever been strangers to paint, we generally place the owner in one of two classes : he is either lazy and shiftless or is on the verge of bankruptcy and doesn't care. On the other hand the buildings may be small, but if they are nicely painted the owner is at once branded as being careful and industrious and we have a desire to stop and make his acquaintance.

Don't build without paint. It matters not whether wood or steel is used it should be covered with a good brand of this preserving liquid, as it is a money saver and hence a money maker. Buy a reliable brand and of a kind that is adapted to your needs.

TURPENTINE MADE IN ONTARIO.

ACCORDING to the Alexandria News Mr. Robert Sibbitt, of Carleton Place, has formed a company to manufacture turpentine and by-products out of pine stumps. The capital stock is $500,000, and with Mr. Sibbitt in the enterprise are associated several prominent American financiers. Mr. Sibbitt has now at Barry's Bay on the Canada Atlantic an experimental plant that cost him $10,000 and has already manufactured turpentine. The new company have acquired all the pine stumps in the upper regions of the Ottawa, from farmers and lumbermen and will locate about thirty or forty turpentine stills in different places. Norway or red pine is what is used; white pine is of no value. The manufacture of turpentine is a process of distillation. The pine stumps are placed in a large retort 10 feet high by 6 feet in diameter; this receptacle is lined with sheet iron. Around it, but not in close proximity to it, a wall of brick, and then steam is turned into this vacant jacket. The retort is heated by the steam and the tar thus obtained is conveyed in pipes to a drill where it is boiled. The vapor arising runs through a worm, with cold water running into it and runs out turpentine. Mr. Sibbitt has manufactured 20 gallons of turpentine from a cord of old pine stumps, besides a large number of by-products, such as creosete, charcoal, oil of tar and ten others. Samples have been analyzed by a Government analyist and pronounced of a very high order.

STRAY THOUGHTS.

Every man has a hobby and it doesn't take a wise drummer long to find out what his customer's is.

Make hay when the sun shines, but don't take a rest when the skies are cloudy. Gather the hay then.

Don't use the sidewalk to display your goods if it detracts from your window. Familiarity breeds contempt. The window, properly looked after, will pay the merchant's rent.

When you are visiting the Exhibition at Toronto, we will be glad to have you call at our exhibit near the centre of the Main Building.

They wear on the job— not off.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, August 25, 1905.

MID-SUMMER quietness still exists, although manufacturers claim to be well employed for the season. Sorting-up orders, while not heavy, show that all lines of goods are in demand.

White lead is a much better feature than during the last week. Orders are being received in good volume, showing that dealers feel current prices to be right. The demand is greatly improved, but quotations are unchanged.

Linseed oil is steady at last week's prices, but turpentine is very strong, and indications are that a still further advance will be noted in the very near future.

The continued hot weather naturally limits the demand for petroleum as even the best oil has a tendency to shrink, under existing conditions. A heavy Fall trade is expected.

Turpentine—Commands the greatest interest in the market at present, another advance being expected soon. Our quotations are as follows: Single barrels, 89c. per gallon. Two barrels or over, 88c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Conditions are much steadier than at our last report, and there is no probability of a further drop. Current prices are as follows: Raw, one to four barrels, 49c.; five to nine barrels, 48c.; boiled, one to four barrels, 52c.; five to nine barrels, 51c. f.o.b. Montreal. Net 30 days.

Ground White Lead—A decided awakening in trade has been experienced this week. The stiffening of the demand has made prices stronger. though they are, as yet unchanged. We quote as follows: Best brands Government standards, $5.35 to $5.50; No. 1, $5.10 to $5.25; No. 2, $4.75 to $5.00; No. 3, $4.50 to $4.75, all f.o.b. Montreal.

Dry White Zinc—Last week's strength condition of the ground article. Our prices are as follows: Barrels, $5.25; 100-lb. packages, $5.50; six or ten-lb. tins, $6.50.

Dry White Zinc—Last week's strength is still noticeable. We quote: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (ground in oil)—Great activity is still manifest, but there has been no change in prices. We quote: Pure 25-lb. irons 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—No change is chronicled, either in prices or in market conditions. Prices are: Pure linseed oil, $1.75 to $1.85; Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

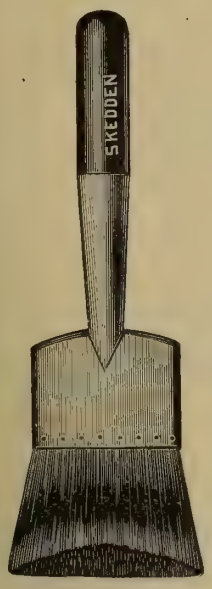
Orange Mineral—The following prices are generally quoted: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c;. smaller quantities, 8 1-2c.

Red Lead—Trade is good for the season. We quote: Genuine red lead in casks $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—The market continues strong, with no special feature. Our quotations are as follows: Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—Business is unexpectedly brisk, and the outlook for Fall is brighter than ever. We quote from $1.20 to $1.40 per gallon.

Castor Oil—A decidedly stronger market is reported this week. Producers have raised their prices, but jobbers are still quoting as follows: 8c. to 9c. in wholesale lots, and 1-2c. additional for small lots.



Litharge—We give prices: Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum— Hot weather makes dealers unwilling to risk the probable loss on large orders, so that only a normal business is being done. The first touch of Fall coolness will no doubt awaken the trade and it is expected that the revival in business will be followed by a sharp advance in prices.

WINDOW GLASS—MONTREAL.

Shipments are still very light, and the situation is very disappointing to the trade. Enough glass is coming in to supply small hand-to-mouth orders, and prices are already so high that jobbers cannot raise them. Otherwise, condition would warrant a sharp advance. We quote as follows: First break, 50ft., $2; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 feet, $4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, Aug. 25, 1905.

A VERY bright and active market is reported this week for paints and white lead. The large amount of building being done warrants a good demand, and dealers say that the demand is much larger than it usually is at this time of the year.

White lead is firm and it is possible there may be an advance in the near future. Window glass is very firm at existing prices and because of the scarcity of both English and Belgian glass there is an advance looked for.

Turpentine is away up in price this week, it being quoted 4c. in advance of last week's prices.

Linseed oil is somewhat easier on the local market, there being a drop on the English market. It is, however, not expected to influence the local market to the extent of a reduction. The Canadian crop of seed is now being harvested, and will soon be on the market at a price which will allow crushing in Canada. Within two or three weeks Canadian oil will be on the market.

White Lead—Ex Toronto, pure white $5.40; No. 1, $5.02 1-2; No. 2, $4.65; No. 3, $4.40; No. 4, $4.15 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white. $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 51c.; boiled, 54c.; 5 to 9 barrels, raw, 50c.; boiled, 53c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrel, 93c.; 2 to 4 barrels, 92c.; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—As usual at this season, there is little activity. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass— Glass is very firm at present prices (see current market quotations), and an advance is expected, caused by the scarcity because of the strikes in England and Belgium.

SHERWIN-WILLIAMS PICNIC.

THE employes of the Sherwin-Williams Canadian division, located at Montreal, held their sixth annual picnic at Bont de e'Ile, August 18. The four hundred employes of the company, accompanied by their friends, took advantage of the outing to enjoy themselves at this beautiful spot. There was a good programme of sports, with the following results :

100 yards dash—1st, J. L. Vallee; 2nd, F. Bissnett; 3rd, H. Gordon.

50 yards dash (ladies)—1st, Miss C. Possnett; 2nd, Miss E. Vallee; 3rd, Miss L. Mullins.

50 yards dash (boys under 12) — 1st, J. Mildam; 2nd, W. Mills; 3rd, B. Clements.

Hop, step and jump—1st, J. Ellard ; 2nd, F. Bissnett; 3rd, J. L. Vallee.

Egg rolling race (ladies)—1st, Miss A. Vallee; 2nd, Miss K. Gordon; 3rd, Miss E. Whitehead.

Sorting boots—1st, W. Tetreault; 2nd, T. Larin; 3rd, J. L. Vallee.

Three-legged race—1st, J. L. Vallee and T. Larin; 2nd, W. Tetrault and A. McBride; 3rd, J. Quinn and H. Nolan.

Tossing tournament—1st, J. Ellard; 2nd, J. Quinn; 3rd, J. L. Vallee.

Sack race—1st, R. Wilson, 2nd, A. McBride; 3rd, J. D. Barker.

Tug-of-war — Won by Mr. Ellard's team.

NOVEL ADVERTISING.

A LARGE eastern paint manufacturing concern has adopted a novel way in which to advertise its products. Heretofore for a number of years the firm has been doing indiscriminate advertising; sending out thousands of circulars annually to lists of names secured in various ways. A large percentage of people in these lists had no intention of doing any painting and, therefore, the most of the money spent was wasted, but a new idea has been hit upon. The local dealer handling the paint manufactured by the firm is requested to keep his ears and eyes open, and when he hears of anyone that contemplates painting he sends the name to the paint concern on a post card, furnished for that purpose. The paint manufacturers do the rest. Now here is a good tip for every dealer who sells any sort of building material, paints or any thing else that consumers talk of using, says an exchange. When the building season, for instance, arrives, keep a list of the names of persons who are talking of building, and keep after them constantly until they have bought their supplies. Write letters and interview personally whenever you have time and the opportunity offers. In this way much of the energy put forth in trying to reach everybody is saved. The same system can be applied to all lines of goods that people talk of using before they actually buy.

OIL ON THE ROADS.

ROAD-BUILDERS throughout the country are experimenting with oil for laying the dust on roads, and in many places it has been used with good results, especially in California. The tracks where motor-car racing is held are being similarly treated and the experiment is being awaited with interest, for the only disagreeable feature about automobiling is the dust. To show the good use to which oil has been put for dust-laying, the California Promotion Committee has given out some data received from the State Department of Highways, which shows that California has now almost 3,000 miles of roads which have been converted from dusty, and frequently impassable highways, into excellent avenues by the use of crude petroleum oil as a road dressing. Out of the fifty-seven counties of California, at least forty counties now have oiled roads. Of 2,776 miles of oiled roads in California 552½ consist of city streets. In addition there are 1,099 miles of oiled railway roadbed in the State. The first experiment in oiling roads was 1898. It was found that when oil was applied it immediately began to bind together all the loose particles and formed a stratum resembling asphalt. One of the most convincing illustrations of the proof of the efficacy of oil was provided on the road to the Belmont Park races. Where the road was oiled there was no dust.

THE TAXATION OF WINDOWS.

IN the Gentleman's Magazine Mr. W. A. Atkinson gives some curious and interesting particulars as to the taxation of windows. The tax, which was first imposed in the seventeenth century, was always very unpopular, and repeated attempts were made to abolish it. In 1850 Lord Duncan moved, not for the first time, the total repeal of the duties, and, remarkable to relate, even at that time of day the Government opposed the motion, and it was rejected by a majority of 3 in a House of 157 members. The repeal was, however, effected in the following year, on July 24, 1851, and a duty upon inhabited houses was imposed in its stead. The duties themselves were by no means light. In or about 1775, for instance, a house containing eight windows would be charged three shillings yearly for inhabited house duty, and sixpence for each window. In 1805 it would be charged £1 10s. for window duties simply; and in 1838, after the reduction of 1823, the duty would be 16s. 6d. In the same way a house of twelve windows would in 1775 be taxed three shillings house-tax and 1s, 2d each window—seventeen shillings in all; in 1805, £4; in 1838, £2 4s. 9d. The revenue derived from the taxation of windows in 1838 may be put down at about one and a quarter millions sterling. In 1850 it was £1,832,684.

STOVES AND TINWARE

EVOLUTION IN STOVE TRADE.

LET us look at what the evolution of things has meant to this country. Let us look for a moment at the wonderful development that has been made in the production of fruits by grafting and specialty farming. Let us go a step farther and contemplate for a moment the wonderful changes that have taken place in the production of vegetables for daily consumption of the American people. A step farther and we find that the seasons have been practically annihilated by the rapid transit of vegetables and fruits in refrigerator cars from and to the very utmost parts of this country. From the farmer's standpoint let us contemplate for a moment the marvelous results that have been obtained through the intelligent breeding of stock and the tremendous profits that are made by specialty stock raising. Let us go a step farther and contemplate the results obtained by the methods of packing houses. These results were described in a very facetious way by one of the great packers of this country when he said that every particle of the pig was now utilized except his squeal. This is equally true of all food animals. Only a few years ago the value of crude oil was entirely unknown. To-day the by-products of crude oil are in the hands of the people of the world even to the utmost borders of civilization, and the matter of farming implements, those of us who can remember the crude manner in which the implements of farming were made during the years immediately following the Civil War stand amazed to-day at the wonderful improvements and facilities that have been given to the farmer through the ingenuity of the manufacturers. The same thing may be said of the cereals of our country. In the years immediately following the war, the farmer in remote sections had no means of marketing his grain. To-day the grain of America is not only distributed from one side of the country to the other, but is sent out all over the world, it being taken by the transportation company from the very stubble field in which it was grown and carried by rail and water to the most remote parts of the world. In the same direction we find products of our grain, flour, meal, whisky, beer, breakfast foods, etc., also distributed to the ends of the earth, all of which means a profit to the American people from the tiller of the land to the artisan in the workshop.

Should Appeal to Retailers.

All of these things should therefore appeal to the retail merchants throughout the country and do so appeal to them, that is to say, that where a successful merchant is found, we always find that he is a man that is well read and who is well versed as to the progress, improvements and developments which are taking place almost daily, and that he has entirely abandoned the old time methods of merchandising.

Now to apply this proposition to the subject of this paper, "The Evolution of the Stove Business," what do we find? We find that the merchant who is selling stoves, if he is joined to his idols, if he does not know the Civil War is over, if he is going to market with corn in one end of his sack and a stone in the other, you will find such a man buying old time goods, cheap and inferior stoves and putting in the best part of his time in trying to find out how cheap he can buy and how cheap he can sell his goods. There is nothing but failure confronting such business methods in this up-to-date American business world.

To illustrate another feature of the human mind I recall an incident that occurred a few years ago within my knowledge, where a certain farmer and his wife went into town to buy a cook stove. Fortunately they drifted in to the store of an up-to-date progressive merchant. The farmer made known the fact that he wanted to buy a cook stove and that it must be cheap, etc. The fact soon developed that the merchant had no cook stove cheap enough to meet the views of the prospective buyer. Then the merchant through some adroit questioning developed the fact that his wife was a typical farmer's wife; that is to say, that she was a very much overworked woman, the mother and nurse of several children, the household drudge, and her appearance gave evidence of the fact that she was a drudge pure and simple and in no sense a wife and mother, whereupon the merchant inquired in a blunt way of the farmer as to whether or not he loved his wife. The farmer finally admitted that he did. The merchant then said you have a very poor way of showing it, and for example, he asked the farmer why it was that he had bought one of the best wagons that was made and why he had bought a fine set of harness, and why he was driving two splendid farm horses and why he purchased the highest grade plows that could be found, and why it was he had bought other up-to-date farming implements. The man replied it was necessary to have these things in order to successfully conduct his farm. This was the very answer the merchant expected to get. He then said if these things were necessary for the farm why was it not reasonable that the farmer should put into his kitchen an up-to-date range with hot water attachments that could be kept full by the hired men, with warming closet and all other up-to-date facilities that would lessen the drudgery of the wife. It is needless to say that the wife got some consideration and a high-grade up-to-date cooking apparatus for her kitchen. This incident only shows that if farmers and working men must have good tools, the family should also have good cooking utensils and cooking apparatus, good furniture and the comforts of a home. This incident also shows that the merchant who is trying to buy cheaply made and shoddy goods with the expectation of building up a profitable trade is confronted surely with failure. On the other hand the merchant who is wise to see the difference between the shoddy and the good, who is progressive enough and thoughtful enough to feel the pulse of the American people is the man whose store you will always find high-grade, up-to-date goods, and what is better still, a successful merchant.—F. G. Blackwell.

GURNEY INVITATION

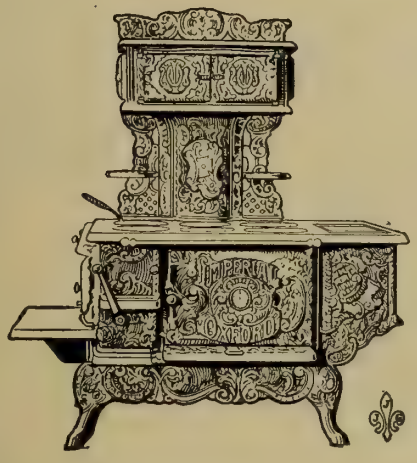
The Gurney Foundry Co., Limited, King street, Toronto, are sending out very neatly gotten up cards containing the following:

"The officials and traveling staff of this company will be 'At Home,' either at the offices and works of the company, No. 500 King street west, or at their exhibit in the northwest corner of the Stove Building on the Exhibition Grounds, August 26 to September 11 (Canadian National Exhibition), where a cordial reception will be extended to you and your friends."

STOVE ITEMS.

If the competition of range pedlar is felt, the local merchant should advertise now to head off the harvest the pedlar will endeavor to gather as soon as the farmer has money to spend in the Fall. Advertise in the local paper and show the advantage of doing business with a dealer who is handy all the year round to make any necessary repairs or changes. But unless the goods are sold at a fair margin all the advertising and hard work will fail to draw and hold the business.

Every hardware merchant who sells stoves should have a competent man in his employ to do furnace repairing. There is always a good deal of this work to be done, and if it hasn't been pushed already a strong campaign should be conducted from now till snow flies in order to get this business. A "furnace repair" advertisement in the local paper should bring results.



Have you sold out your stock of camp stoves? Better push them by a window display.

Don't neglect the small things. Some merchants devote all their time to stoves, refrigerators, nails, wire, etc., and overlook many of the excellent money-making small novelties, such as tack hammers, tacks, pocketknives, lemon squeezers, paring knives, food choppers, small tinware, pliers, nail clippers, wrenches, can openers, etc., etc. There are hundreds of these little things that can well be given a counter by themselves near the front of the store. They do not require much work in their selling, and the profit is almost invariably much greater than nails and other staple lines.

James Watson, of the Banner Coal Mine, Sturgeon, Alta., says that there lies an almost inexhaustible supply of coal under the surface in the vicinity of Edmonton. Seams of coal have been found all over the country within a twenty-mile radius of the city, varying in thickness from three to twenty feet. He predicts for Edmonton a great future as a manufacturing centre.

We give you "talking points" that are invincible; in fact, the goods talk for themselves. Just call attention to their excellence of material and construction, which give superior service and durability, especially in the oven, the vital portion of any range; their artistic beauty, which make them an ornament to the house, their economy in consuming fuel, AND the Guarantee Bond which accompanies each range. The

Imperial Oxford Range

is the handsomest and most serviceable that sixty years of constant effort could produce. Over 40,000 now in use in Canada alone. One of its most striking features is the Diffusive Flue, for oven ventilation, which insures perfect pastry baking—the supreme test of a range; the draw-out oven rack gives special facilities for basting, etc; the draw-out Duplex Grate and frame permit repairs to the grate without disturbing the fire-box linings, an insurance on the life of the range, as every stove man knows; the oven thermometer which has become indispensable to every progressive housewife; the perfected fire-box whose improvements are seen almost at a glance. The e are some of the features which customers will readily appreciate, and there are many more.

Does not the **IMPERIAL OXFORD RANGE** seem like a good article for your trade?

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 90.)

Quebec Hardware Markets.

Office of Hardware and Metal,
232 McGill Street,
Montreal, August 25, 1905.

SHELF goods are now moving very strongly, and, to a certain extent share with sporting goods, the most important position in the trade. General business is particularly good, all the jobbers being crowded with orders.

Several inquiries for wire netting were received during the week, and considerable surprise is expressed at this, as the season was thought to be over.

The approach of the open season for duck shooting is still further stimulating the trade in guns and ammunition, while many orders for rifles have been booked in anticipation of a good season for big game.

All lines of builders' hardware are selling briskly. Local building strikes are approaching a crisis, and their settlement will help the trade in these lines.

Axes—Trade is increasing with the Fall coming on. Prices are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—No change can be reported. We quote as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—Business is quite up to expectations. Prices remain as follows. Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—Orders booked months ago are going forward rapidly, but no new business is reported. We give prices: Cold blast, $4.50; No. 0, Safety, $3.50.

Barb Wire — Is practically dead. Only occasional inquiries are received. Our quotations are as follows: $2.75 for 100 lbs. f. o. b. Montreal; $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—Are very slow at this season. Prices are unchanged as follows $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—No special demand is apparent, but trade continues very good. Our quotations are as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Are included in nearly every order coming in. Prices are: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts— The usual good demand is reported. We quote: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Wire Nails—Prices have been cut by some dealers, so that we give only nominal quotations. There is no profit in the figures given in many quarters, and the market is very slow. We quote: $2.10 to $2.20 per keg f.ob. Montreal.

Cut Nails—No activity is seen on this market, though manufacturers report that they are still shipping orders. Prices are: $2.20 per keg f.o.b. Montreal.

Horseshoes—Trade is good, and is improving each week. Our quotations are as follows: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all 1 to 4. $6.75. Packing—Up to three sizes in a keg, ten cents per hundred pounds. More than three sizes twenty-five cents.

Sporting Goods—All the wholesalers report an extraordinary demand for shot guns and ammunition, while orders are now coming in for rifles. The season for ducks opens Sept. 1st while the big game may be shot after October 1st. Our quotations are as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Unsettled building strikes are the bane of the trade. Few buildings are being finished, and, consequently, there is little or no demand for roofing felt. Prices are the same as at our last report.

Cordage—Business is rather quiet, at same prices as we last quoted.

Cement and Firebrick—No recent developments are to be noticed. Trade is quiet, as is to be expected, at this season. Our quotations are as follows: $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—The demand is quickening, many orders going up into the lumbering districts. Our prices are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Spring Hinges—Are very slow at present. We quote: No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—Good orders are being booked for delivery next month. We quote: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—Orders for large shipments are on the books of local jobbers. Prices are 25c. to $2.50, according to quality.

Sleigh Bells—Inquiries coming in denote that the more expensive lines will be greatly in demand this week. We quote as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common 70c. to $1.50, pear shape $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—Some orders are being booked, and the better grades are now looking up. Our quotations are as follows: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12.00; 16-oz. Hessian, unlined, $6.50; 3-4 lined $11.50; full lined, $14.00, and up to $24.00; Kersey blankets, $9.00 to $21.00; all wool, $24.00, $30.00, $48.00, and $60.00.

Ontario Hardware Markets.

Office of Hardware and Metal,
10 Front street east,
Toronto, August 25, 1905.

ALTHOUGH this is rather between seasons, there is an excellent business being done. The sorting orders that are coming in show that Summer goods are still selling well, while the trade in Fall goods is beginning to materialize excellently. Already there is large trade being done in shot guns and ammunition. Rifles are also moving fairly well now. Some wholesale houses report general business this week even better than last.

There are no changes in prices this week.

Sporting Goods—Shot guns and ammunition are now moving quite briskly, while rifles are also beginning to be a feature.

Washing Machines—There is quite an active demand.

Chain—The ordinary Summer trade is

being done. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Dealers are well satisfied with their sales. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Good business is reported at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demands for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—Demand is reported good and country merchants are ordering in fair quantity.

Wire Nails—There is an exceptionally good business being done in this line, due probably to the extensive building operations.

Cut Nails—There is a very satisfactory trade being done. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Trade is particularly good for this season. We quote as follows: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—A seasonable trade is noted. Prices are the same.

Screws—The mills are busy, but stocks are satisfactory. The strong demand keeps prices firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—Trade is fairly good, considering that this is the off season for manufacturing in agricultural machinery, which constitutes the chief demand for bolts and nuts.

Cordage—Sorting orders are coming in. Prices remain unchanged since last week. Our quotations are as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—There is no change in the market this week. Business is very good. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Business is brisk, demand being strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper— The general activity in building circles has resulted in a good business being done so far this season. Prices are firm.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 25, 1905.

NO relief has yet been experienced in the copper market, and the probability is that the present scarcity is due more to natural causes, and big demand, than to manipulation and restricted production. Local metal merchants are finding it very difficult to get ingot casting copper, with the result that brass manufacturers have been compelled to withdraw prices, even on contracts already booked.

Tin has created much interest, during the week, on account of its fluctuations. Early in the week a lull in the English market was reflected here by a drop in price, but a reaction set in, and at the time of writing tin is again at last week's price.

Even those dealers who were fortunate enough to lay in a good stock of antimony before the remarkable jump in price are rapidly approaching the end of their stock.

Pig iron has been in good demand and some good orders reported for the week. One or two lots of 500 tons have been bought, this helping to retain the strength of the market.

Canada Plates—Nothing of note has transpired since the changes announced last week. Prices are: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Ingot Tin—After a few fluctuations the market is again steady at our last week's prices. We quote: 35 1-2c. per lb.

Pig Lead— No change is reported. Trade continues very good and prices are firm, as follows: $3.75 to $3.85 per 100 lbs.

Boiler Tubes—Satisfactory sales are being made right along. Our prices are British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—As mentioned in our summary, some good orders have been placed by Canadian firms. We quote:

"Disc," No. 1	$16.50	delivered Montreal.
"Dom.," No. 1	17.50	" "
Usual difference in price for lower grades.		
Ferrona No. 1	$18 00	delivered Montreal.
" No. 2	17.50	" "
" No. 3	16 50	" "
" No. 4	16.00	" "
Londonderry	$18.50 to $19.00	" "
Glengarnock	18.25	" "
Gartsherrie	19.25	" "
Carnbroe	18.50	" "
Carron No. 1	19.00	" "
" (special)	18.00	" "
Ayresome No. 1	18.25	" "
" No. 3	17.50	" "
Summerlee	18.25 to 18.75	delivered Montreal.
Clarence No. 1	17.50	" "
" No. 3	17.00	" "
No. Cleveland	17.50	" "

Tool Steel—There is no change in conditions previously reported. Prices are as follows: Colonial Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—The only change is in machinery iron finish, which has been quoted a little too high. Prices quoted are as follows: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.00; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—Trade is good, with no change in prices, which we quote as follows: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—Large orders are reported by the dealers. Prices are: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra

Black Sheets—Prices are steady at last week's figures. We quote as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—In spite of the scarcity reported by all jobbers they refuse to buy at the current price. We quote: 14 1-2c. to 15c.

Sheet Zinc—The scarcity reported last week still dominates the market. We quote: Cask lots, $7.25, small lots, $7.50.

Tin Plates—Are being closely watched by the trade on account of the almost daily fluctuations in ingot tin. The prices now ruling are: Cokes, $3.75; charcoal, $4.

Ingot Zinc—No change in prices has resulted as yet from the scarcity reported before. We give prices: 6 1-4c. to 6 1-2c.

Scrap Metal—Scrap iron is still practically dead but a more cheerful tone is given to the market by an increase in the price of copper and brass scrap, to correspond with the strengthening of the market for new metals. We quote: Copper and wire, 13 1-4c.; light copper, 12c.; heavy red brass, 10 3-4c.; yellow brass 9c.; light brass, 6c.; lead, 2 5-8c.; Zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap $12; stove-plate scrap, $9; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-2 to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
August 25, 1905.

THE feature of the metal market this week has been the scarcity of ingot metals upon foreign markets, and the consequent jump in prices. This has been felt very considerably upon the local market with the result that both tin and copper have advanced, and we are expected to go still higher. Tin has advanced 2c. per lb. and copper 1c. It is thought that tin may reach the 40c. mark and copper the 20c. mark.

There is an active antimony market this week in spite of the high prices. Stocks bought before the rise are now giving out, and buyers simply must buy and pay the price. There is also a much more active tin plate market this week than last. So far the old metal market is not afflicted by advances in ingot metals.

Bar Iron—There is a very active market. The mills are running to their full capacity. We quote: $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—Market has advanced 2c: per lb. Ingot tin is very scarce, and at the same time buying is active. We quote: 37c. to 38c. per lb.

Tin Plates—Since last week the demand has picked up and is now quite active.

Galvanized Sheets—An excellent demand is reported. Prices are steady.

Brass—Conditions are unchanged, business being fairly active. Discounts continue at 10 per cent.

Lead—The market is strong, with stocks light and demand very active. Prices are very firm. We quote: Pig lead, $4.00 per 100 lb., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—There is an active demand. Prices are steady: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper— The continued scarcity of copper, and the very active demand, has caused an advance in copper of 1c. per lb., with a further advance expected. Our quotations are as follows: Ingot copper, $16.75 to $17.00 per 100 lbs., and sheet copper $21.00 per 100 lbs.

Antimony—In spite of the excessive prices ruling, there is an active demand for antimony. Stocks obtained before the rise are giving out, and users are forced to buy and pay the price.

Old Material—The advances in old metal in the States, and the general advances in ingot metals, have not affected the local old metal prices except, perhaps, to make them very firm. Dealers' buying prices are as follows: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old

rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Prices are firm at last week's quotations. We quote: Anthracite in cars at bridges: Grate, $5.15 per gross ton; egg, stove and nut, $5.40 per gross ton; pea, $3.80 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

MINES AND MINERALS.

The Queen Mine at Ymir, B.C., purchased recently by Wm. Waldie for $50,000, has been bonded to C. F. and R. J. Doyle, Chicago. The bond calls for the payment of $100,000 within 12 months, $20,000 of which is to be paid by September 10.

* * *

Some fifty town lots have been sold at Cobalt, Ont., at prices ranging from $250 to $710.

* * *

By the recent purchases of adjoining properties, the Granby Consolidated Co. have increased their holdings in the Boundary district at Phoenix, B.C., to about four times its original area. The properties added are those of the Gold Drop Mining Co., which includes the Gold Drop, the Gold Drop Addition Fraction, the Phillipsburg, and Nugget claims. This property has been under option at $250,000 for some months, during which time it has been exhaustively tested by drill holes, which have disclosed a deposit similar to that already developed on the Knob Hill and Old Ironsides.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, August 24, 1905.

To put it mildly, quiet confidence in the future reigns throughout the iron industry, while some of its great captains foretell, with expressions of regret the coming of a boom this Fall.

The trade is on the tiptoe of expectation over the purchases of pig iron which the Steel Corporation are to make. We understand that it will not be done for the next week or ten days in any case. The officers of the corporation have ordered every modern furnace into blast, so that only Niles, Zanesville and Columbus will be idle. With all these furnaces in operation, and drawing stocks down to the lowest limit there will be a shortage below requirements of 35,000 tons for September.

While the general trade is buying pig iron on a conservative scale, the consumption is evidently excellent since requests for quick shipments are frequent and urgent. Among the larger purchases during the past week are an aggregate of 10,000 tons of foundry iron for the first quarter of next year by a large mining machinery plant in Milwaukee and a lot of 8,000 tons of malleable pig for St. Louis. A leading steel foundry interest has purchased quite a tonnage of basic pig and of low phosphorus pig, the demand for the latter having been quite active lately.

In addition to the 75,000 tons of steel rails taken by the Harriman roads during the last week, 25,000 tons more have been purchased, of which 15,000 tons went to an eastern mill which can reach the Gulf by water. Some of the large systems tributary to Chicago, notably the St. Paul and the Rock Island, have been in the market in vain for large blocks of rails for this year's delivery. The St. Paul succeeded in placing 3,000 tons and the Great Northern 5,000 tons.

Eastern plate and structural mills are marketing quite a tonnage in the Chicago district. Thus a Coatesville mill took a lot of 6,000 tons of plates in Chicago and delivered the order within a week.

From Cleveland comes the report that three new ships have been contracted for and that seven more vessels are virtually placed.

The wire trade continues to witness a heavy movement. Some of the sheet makers report a heavy increase in business, but others still complain that there has been little improvement. The relatively low prices on merchant pipe have caused a perceptible increase in the demand, and even in tin plate business is stirring.

In the metal trade the principal item of interest is that 16 cents has been reached for lake copper for early delivery, that price having been made on the merits of the situation alone.

LONDON METAL MARKETS.

From Metal Market Report, Aug. 23, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 47s. 4 1-2d., and Scotch warrants at 50s. 6d., making prices, as compared with last week, 3d. higher for Middleboro, same for Scotch warrants.

Tin—Spot tin opened strong at £150 futures at £149 7s. 6d., and after sales of 170 tons of spot and 100 tons of futures closed firm at £150 for spot and £149 7s. 6d. for futures, making price as compared with last week 5s. higher on spot and 7s. 6d. lower on futures.

Copper—Spot copper opened strong at £69 15s., futures £69 12s. 6d., and after sales of 500 tons of spot and 500 tons of futures, closed firm at £69 17s. 6d. and £69 13s. 9d. for futures, making price as compared with last week, 11s. 6d. higher on spot, and 8s. 9d. higher on futures.

Lead—The market closed at £14, making price as compared with last week, 1s. 3d. higher.

Spelter—The market closed at £24 15s. making price as compared with last week 2s. 6d. higher.

Nova Scotia Trade News

THE hardware business is quiet and prices show no perceptible change during the week. The present dullness, however, was expected, and therefore it causes no surprise. About the only line showing any activity is building materials. Collections are coming in fairly good, and jobbers are not complaining. By the end of the month orders should be coming in for Fall supplies.

In Cape Breton everything is booming; the collieries are working full time, and also the steel works. It is reported on good authority that the Dominion Iron & Steel Co. have just closed a contract with the Intercolonial Railway for the purchase of 25,000 tons of steel rails. The price to be paid for these rails is $52.50 per ton, and delivery is to commence in the Autumn, or as soon as the Grand Trunk's order of 25,000 tons is finished. The rail mill made a record on Saturday last, when it turned out 631 rails in ten hours.

The Nova Scotia Telephone Co. have now completed the metallic line connecting Parrsboro with the main trunk line of the company at Amherst. This line is of pure copper, strung on cedar posts. Perfect connections can now be had between Parrsboro and all points on the company's system to St. John, and other cities with which connections can be had through the company's lines. With this metallic circuit ordinary conversation can be carried on with the greatest of ease.

The Maritime Contracting & Mining Co., which has been putting in a system of waterworks for the town of Springhill, has brought an action against that town, claiming damages for breach of contract. The Montreal Pipe Foundry Co. has been joined as defendant. The town in defence claims a right to retain certain moneys due under the contract, and also claims the contract has not been duly performed.

The new brick station of the Oxford Electric Co. has been completed, the machinery set up, and the electric lights are now in operation again, for the first time since the destruction of the plant of the company at the time of the fire which burned the factory of the American Furniture Co.

Mr. Hal. Upham, of Parrsboro, one of the popular young men of that town, leaves the employ of J. H. Cameron, hardware merchant, at the end of the present month and goes to Halifax, where he has secured a position with the firm of Emerson & Fisher.

The steamer Cacouna landed at Sydney last week 270 crates of fire brick for the Nova Scotia Steel & Coal Co.

THE CANADIAN NATIONAL EXHIBITION.

ONCE more the Canadian National Exhibition, or the Fair, as the citizens of Toronto affectionately call it, is approaching. On August 26 the gates will be thrown open on what is the biggest annual exhibition on the continent. It may fairly be predicted that 1905 will eclipse all others in the magnitude of the undertaking, and the excellence of the attractions. The fine set of buildings which are now grouped together in Exhibition Park are ready for service, and the staff of officials, under the efficient management of Mr. J. O. Orr, are speedily completing arrangements for the entertainment of the coming crowds.

Educational Features.

Before referring to the attractions in the way of amusements, mention should be made of the exhibits, which form the essential part of the Exhibition. The progress of manufactures at home and abroad, the development of science and art, and the improvement in farm produce and live stock, are all represented in their highest form. The farmer carries home with him ideas on modern and time-saving farm implements, and information on breeds and relative qualities of live stock. Above all, he carries away with him higher ideals of excellence. Having seen the best that the country can produce, he is fired with the ambition to equal or better that showing. So with manufacturers. They see the best that human ingenuity has devised, and they straightway speculate on the possibility of applying what they have seen to their own business. More than anyone else, the business man is benefitted by such an exhibition. He sees the goods which he sells in course of manufacture in the Process of Manufacture Building, and he is fitted as never before to buy intelligently and to sell intelligently, because he knows whereof he is talking.

That manufacturers recognize Canada as being the country of the future is shown by the large demand for floor space in the Manufacturers' Biulding. Never has there been such a complete display of manufactures as there will be this year. The big building, with its 165,000 square feet of floor space, will be taxed to its uttermost capacity.

Nor are the finer elements of modern civilization at all backward. From simple and humble beginnings the arts and sciences have advanced in Canada till now we have a sturdy Canadian art. Sculpture and paintings will be on exhibition in the spacious new art gallery, which is admirably located for securing the best effects.

The management is to be congratulated on the excellence of its special attractions. The two features which will outrank all else in attractiveness will be the magnificent art exhibit, including the wonderfully fine painting by Edwin Abbey of the Coronation of King Edward VII. (which was painted at the command of the King, and is worthy of the magnificent subject of which it treats) and the Irish Guards' Band.

THE IRISH GUARDS' BAND—Canadian National Exhibition.

Other paintings and art creations of exceptional merit have been loaned by the Corporation of London, the Govern-

The Irish Guards' Band.

What is known as the finest military musical organization in the Empire will give two concerts daily on the grounds. The Irish Guards are a battalion who need no introduction to the public. The Irish Guards' Band has been awarded the palm for excellence by all the highest musical authorities in Great Britain, and is the favorite household band of His Majesty the King, who, whenever possible, selects it to play at the royal levees, drawing rooms and dinners, in fact on all state occasions.

Reduced rates will be in force on all Canadian railways. Besides the regular reduction, which makes a trip to Ontario's capital an inexpensive outing, there will be a number of one-d special excursions at exceptionally l rates.

Merchants who come to Toronto d ing Exhibition will want to combi some business with their pleasure. T afternoons and evenings may well be voted to sight seeing, leaving the mo ings free for visiting the wholes houses. We again cordially invite grocerymen of the country to make offices of Hardware and Metal th headquarters, while in the city. You c have your mail directed here and faci ties are provided for letter-writing a telephoning. If you have a friend meet, or an appointment to keep, y will find no more central or suitable pla than at 10 Front street east, just Yonge.

FIRE PROTECTION AND WATE SUPPLY.

AN example of what is probably of the most up-to-date instal tions of this kind in practice is be seen in the new Henry R. Worthi ton Hydraulic Works at Harrison, N. Water is raised by the air lift, whi is peculiarly well adapted to scatte batteries of bored or drilled wells. permits centralization of the pow plant, as the air compressor may located at any convenient point and air piped to the wells. It also eli inates all valves, plungers and oth moving parts from the well itself, th doing away with the air arising in oth devices from sand and gravel. T principle of the air lift is illustrated Fig. 1. Compressed air is forced i the water through a nozzle inside a near the bottom of the flow pipe, for ing a column of mixed water and air low specific gravity within the lat which, under the pressure of the so column of the water in the well outsi rises continuously. The submerged pa of the pumping outfit consist simply the wrought iron casing flow and pipes, a strainer, an elbow and p connections, all of which are practica indestructible even when working gritty water. At the Worthington pl there are four of these wells averagi 400 ft. in depth scattered within a 2 ft. radius, and having 8-in. casings, in. air and 4¾-in. flow pipes. One w discharges the mixture of air and wa directly into the concrete basin or res voir nearby. In the others the air a water discharge vertically from the fl pipe against an "umbrella," which lows the air to escape while diverti the water back into an open concr basin from which it flows by gravity to the reservoir.

Air is supplied to the wells at a pr sure of from 80 to 85 lb. by a Laidla Dunn-Gordon compressor in the m power house, having a capacity of abo 800 cu. ft. of compressed air per minu Ninety lb. pressure is required to st the wells, but 60 lb. will maintain flow. When it is desirable to pump unusual quantity of water, or stop t compressor, a large Cincinnati-gear co pressor by the same builders, which f nishes the aid for the foundry, machi shop and other departments, may be e ployed.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost must accompany all advertisements. In no case can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

BUSINESS CHANCES.

IF you wish to buy or sell a business anywhere in Western Canada, it will pay you to communicate with us. We have some good legitimate propositions on our list; handle nothing else. Address The Business Brokers, 611 McIntyre Block, Winnipeg, Man. (tf)

MANUFACTURERS' AGENT WANTED.

A LARGE firm of bedstead manufacturers in Birmingham, Eng., are open to engage an agent in Canada for the sale of their goods. Address Box 254, HARDWARE AND METAL, Toronto. (tf)

SITUATIONS VACANT.

HARDWARE clerk, with knowledge of tinsmithing by September 1. Box 483, Essex, Ont. (34)

TINSMITHS wanted; 20 to 25c. per hour. Apply to Pedlar People, Oshawa, Ont. (34)

TINSMITH wanted; experienced; must be good on furnace work; steady employment; wages $12 per week. Box 269, HARDWARE AND METAL, Toronto. (34)

WANTED—At once, one first-class tinsmith; must be temperate; steady job to right man. Apply to S. B. Merrill, Enterprise, Ont. (34)

AT once, bench hands for box-seat diner chairs; state experience; good wages paid. Stratford Chair Co. (f)

BLACKSMITH wanted, horseshoeing and general work; state wages, with board. John Craib, Summerville, Ont. (f)

BLACKSMITH wanted; good floor man; steady job; good wages. F. Trump, Woodstock. (f)

WANTED at once, a good shoemaker. Apply to Wesley McKnight, New Liskeard, Ont. (f)

WANTED, steel range mounters. Apply Walker Steel Range Co., Grimsby, Ont. (f)

FOR SALE.

A FIRST-CLASS foundry in good running order, equipped with cranes and overhead trolley, machine shop and pattern house; works are situated on two acres of land at New Toronto, just outside city limits, with splendid shipping facilities; modern plant in every respect. Address Pease Foundry Co., Limited, 191 Queen street east, Toronto. (38)

PERSONAL AND TRADE NOTES

Montreal.

S. J. Granger, hardware merchant, Montreal, has sold his business.

Mr. Geo. Pearsall, of Toronto, called on the Montreal trade this week.

A new hardware business has been started under the name of Carmel & Frere.

Mr. Hickman, of the Ottawa Paint Works, was in Montreal on a flying visit last Monday.

Mr. D. Eppelsheimer has joined the mechanical engineering staff of the Montreal Rolling Mills.

G. H. White, hardware merchant, of Orillia, has returned home after visiting Montreal and Quebec.

W. B. Stewart, Toronto agent of the Hamilton Cotton Co., was in Montreal for a few days this week.

Mr. and Mrs. F. W. Karn, of Woodstock, visited Montreal while returning to the west from Quebec.

Mr. W. H. Evans, of the Canada Paint Co., Montreal, is spending a two weeks' vacation at Prout's Neck.

The Starke Hardware Co., Montreal, who were recently burned out, have reopened at 28 St. Peter street.

Mr. W. Brown, of Drummond, McCall & Co., Montreal, has returned from a pleasant vacation spent in Toronto.

The Quebec Hardware Association met in the Windsor Hotel, Montreal, last week and decided to make no change in prices.

A Warren of the staff of Frothingham & Workman, Montreal, has returned from Shawbridge, where he spent his holidays.

Messrs. Peck and Stanley, of the Stanley Rule and Level Co., New Britain, Conn., visited the Montreal trade this week.

W. Craig, who represents Frothingham & Workman, of Montreal, traveling out of Kingston, paid a visit to headquarters this week.

Mr. Gordon Seybold, of Seybold, Sons & Co., wholesale hardware merchants, Montreal, has returned from his trip up the Ottawa Valley and reports a good business.

Mr. Geo. Caverhill, of Caverhill, Learmont & Co., Montreal, returned from England on the Virginian and spent a few days among the Laurentians before resuming his duties.

D. B. Swinton, of the C.P.R., Montreal, was elected president of the International Railroad Master Blacksmiths' Association at the convention held last week in Cleveland, Ohio.

Montreal business houses pretty generally recognized the Civic Holiday Wednesday afternoon, thus enabling their employes to take part in the welcome to Prince Louis of Battenburg.

Messrs. McArthur & Webster, contractors, of Winnipeg, were in Montreal this week in connection with the G.T.P. contracts. While here they visited some of the local cement and supply houses.

Among the members of Caverhill, Learmont & Co.'s staff who are enjoying holidays are: Geo. McGowan, who has gone to the Eastern Townships; Geo. Goldthorpe, who is holding forth on poker at Ormstown, and Jno. E. Brown, who is having a good time up the Saguenay.

Mr. J. N. Athill, representing W. & T. Avery, Limited, weighing machinists, Soho Foundry, Birmingham, Eng., was in Montreal recently on business-widening pursuits. He reported that business was prosperous in Canada and that the Motherland was turning marked attention towards us.

Ald. F. J. C. Cox, of Winnipeg, secretary of the Northwest Commercial Travelers' Association, was in Montreal for a few days of this week. Mr. Cox is agent for the building papers of Alex. McArthur & Co., Limited, and speaks enthusiastically of the prosperity of the Canadian Northwest, where he has resided for many years.

Mr. Duane E. Minard, representing the California Asphaltum Co., of New York, was in Montreal recently calling upon the local trade. He was of course nervous about the commercial travelers' tax, which he thought very ridiculous, and after coming all the way up here he was powerless to do business. Notwithstanding, Mr. Minard did some good work and the probabilities are that his firm may establish a branch office in Canada.

Toronto.

Wm. Good, the genial clerk at the Toronto sales offices of the Canada Paint Co., is at present enjoying a couple of weeks' vacation.

T. G. Dexter, of H. S. Howland, Sons & Co., Toronto, is on a trip up the lakes as far as Duluth.

G. McAvity, of the Buffalo Forge Co., Buffalo, was in the city this week.

J. J. Metcalfe, hardware merchant, Shelburne, Ont., was on a business trip to the city this week.

John Audley, foreign representative of the Conrad Wm. Schmidt, varnish manufacturers, Stratford and London E., Eng., was in the city this week on business. Mr. Audley has just come from South Africa where he was in the interest of the firm.

Elsewhere.

H. McQueen & Co., tinware dealers, Port Dover, Ont., have been burned out.

The firm of F. W. Wier & Co., hardware merchants, Winnipeg, has been dissolved.

J. R. Standen, hardware merchant, Osage, N.W.T., has sold out to Munsey & Mitchell.

H. M. Roblin, hardware dealer and tinsmith, Colborne, has sold out to Barfett Bros.

The Canada Launch & Engine Works, Limited, Toronto, have assigned to E. R. C. Clarkson.

Butchart & Bishop, hardware merchants, Brookdale, N.W.T., have dissolved partnership.

Fire did considerable damage to E. McQueen's stove and tinware store at Port Dover last week.

Mr. Frank B. McEown, manager of the hardware department of J. D. Murdock & Co., Simcoe, visited Brantford last week.

W. B. Shannon & Co., hardware merchants, Carberry, N.W.T., have sold the Brookdafe branch of their business to E. M. Jones.

A new sewing machine warehouse has been established in Vancouver by Jas. H. Commiskey and Jas. Caldwell on Horner street.

The New Brunswick Wire Fence Co., have recently added the necessary machinery for manufacturing the most up-to-date fences.

The Rock Island Hardware Co., Rock Island, Quebec, have been dissolved, and S. D. Waterman and R. J. Hunt are taking over the business.

Mr. P. Hanson, builder and contractor, Pilot Mound, has two outfits of men at work, one at Mather and one at Purvis, each building hardware stores.

Mr. John Stewart, hardware merchant, Plum Coulee, Man., is on a visit to his home at Owen Sound. J. A. McTavish is managing the business for him during his absence.

Mr. C. Dolph, manager of the Metal Shingle and Siding Co., Preston, Ont., has just returned from Winnipeg, where he was visiting Clare & Brockert, the western representatives of the company.

CANADA RADIATOR CO.'S NEW FACTORY.

Admirably located on the main line of the G.T.R. about seven miles from Montreal proper, and near the station called Dominion, are the new works of the Canada Radiator Co., formerly established for some years at Port Hope, Ont. The business was founded and developed to its present proportions by Mr. F. J. Travers, the general manager. The floor space covers over two acres, and to look down either arm of the buildings resembles a long avenue. Everything modern and needful for carrying on the work of manufacturing radiators is to be seen. The foundry is a model, and the accessories of comfort for the workmen and convenience for all connected with the establishment are first-class. The fact that they will be able to turn out six times as much work as they could in the old factory will give some idea of how extensive the new premises are. A staff of 150 hands is required, and the capacity will be 8,000 feet per day. The task of moving from Port Hope to Montreal has taxed the railways to a heavy extent as 2,000 tons of freight was billed in the removal. The factory opened for business last week and are running full force now. Orders have naturally gone behind during the moving, but Mr. Travers expects to make up for lost time shortly.

Every street car for the Toronto Fair passes the palatial Show Room of the Metallic Roofing Co., King and Dufferin Streets. Don't fail to notice it.

Sides, posts, roofs, shingles—in fact, everything is made of our Sheet Metal, yet looks like stone, brick and fancy wood-work.

One can hardly realize that such a stately building is metal and only metal.

At the Fair Grounds nearly all the buildings are covered with our Sheet Metal, and our Pavilion in the Manufacturers' Building is another example of ornately beautiful "Metallic" work. It's a feature of the Exhibition you can't afford to overlook.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug. 25, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

AT present the attention of the entire western trade is centred upon the crop reports, as the volume and character of the next year's business depends almost entirely upon the size of the crop. That being the case, if is satisfactory to note that reports received still point to the prospect of the largest crop on record, and in a very short time these prospects should be realized. The optimistic reports have already had considerable effect in causing liberal buying of Fall and Winter supplies.

* * *

Work is in progress on the additions to the warehouse of G. F. Stephens & Co., and before the snow falls large additions will have been made to the floor space of this firm.

* * *

The Munro Wire Works, Limited, of this city, have been awarded the contract for the fence required for the new city park. As this fence is to be used to confine the buffaloes, the prime requisite was strength and durability.

* * *

The new warehouse of the western branch of the Metallic Roofing Co. of Canada, Limited, is now completed, and it is a handsome addition to the buildings on Notre Dame avenue. The building itself is a splendid advertisement of the company's siding and roofing.

* * *

Business was interrupted this week by the civic holiday on Monday, but all lines of builders' hardware are selling in large quantities and the week saw a large turn over. Values are steady.

Screen Wire Cloth—Price is still quoted at $1.55 per 100 square feet. The season's trade is almost over.

Heretofore the industries at Sault Ste. Marie, Ont., have been importing their coke from the south, but the time has come when numerous coke ovens will be established either on the Canadian or American side at the Soo. Coke comes into Canada free of duty and that is the reason the ovens may be established on the American side.

HEATING AND PLUMBING

MASTER PLUMBERS' AND STEAMFITTERS' CONVENTION

(Continued from last issue)

Re Vice-President's Report.

The resolution committee presented the following recommendations regarding the vice-president's report :

We recommend that the matter of the interchange of lists between Canadian and American associations be referred to the incoming executive.

We recommend that the example shown by British Columbia in including all the small towns that have plumbing firms in their Provincial association be followed by other Provinces, it being our opinion that Manitoba could with a little effort be organized into a Provincial association.

Re Secretary's Report.

The recommendations of the resolutions committee respecting the secretary's report were as follows :

We recommend that the secretary reside in the same city as the president, or as an alternative that the president appoint the sub-executive from the same city in which the secretary resides. While in sympathy with the opinion of our secretary that best results would be obtained from the employment of a permanent secretary, still in our opinion the finances of the association do not warrant at the present time the expenditure such a course would necessitate.

We recommend that the hearty thanks of the association be tendered Mr. Gordon for the able and efficient manner in which he has conducted the business of the association during his term of office.

Re N. S. Vice-President.

The report of the resolution committee with regard to Nova Scotia was as follows :

We regret to find conditions in Nova Scotia so unfavorable, and trust that the coming year will bring forth more satisfactory results.

Re Quebec Vice-President.

The resolution referring to Quebec was as follows :

The Quebec report shows very bright prospects for a Provincial association in the very near future. We are pleased to note that the city of Montreal has straightened out their labor difficulties and that things are running smoothly. Great credit is due Messrs. Mansell and Meredith for the help and advice they extended to Montreal members when passing through that city in April last, which goes to show what can be accomplished in organization work by competent men of the stamp represented by the above gentlemen. We believe it would be very beneficial to Quebec for this association to appoint a French-Canadian Provincial vice-president for the ensuing term.

Re Ontario Vice-President.

The report respecting Ontario was as follows :

Your committee are pleased to report that the Province of Ontario seems to be so well organized during the term of the retiring vice-president that he has left but a sinecure for his successor. We cannot pass without comment the hospitable manner in which the Guelph association, composed of but four members, entertained the delegates and visitors, numbering in excess of one hundred and fifty people, at the Ontario annual convention. The Guelph association deserves the greatest credit not only from the Ontario Provincial but from our National association for the pleasures they showered upon their guests on that occasion.

Re Mantioba Vice-President.

The report referring to Manitoba was as follows :

We find that the seed of organization is well sown in Manitoba. Business conditions are very bright, and the coming year should be a prosperous one to the followers of our craft in this Province, so that with a little care we have every hope of seeing a Provincial organization in Manitoba ere the National convenes again. Winnipeg we believe will be greatly benefitted as a result of this year's convention. We have already commented on Manitoba in dealing with the report of Vice-President Hammond.

Re British Columbia.

The resolution committee submitted the following report with regard to British Columbia :

Your committee cannot express in words of sufficient praise the work that has been performed in our westerly Province in the organization of that territory. While the Provincial Association of Ontario has been and is to-day one of the banner Provinces of our Dominion as far as master plumbers' associations are concerned, it has to-day to take off its hat in honor of the progress made in the Province of British Columbia, all due to the untiring efforts of our representative from that Province.

Your committee agree with the recommendation presented regarding the issuing of charters again to our Provincial and local associations, as was done some years ago, and advise the introduction of membership cards yearly to each member.

The recommendation from the same report for the appointment of a permanent secretary has been annually brought before our convention in almost every report, and still the condition of the finances of our association is not sufficiently plentiful to carry out this necessary appointment.

We can only hope that in the near future this will be accomplished. We recommend that the same procedure as last year be continued, viz., that an amount be set aside to each Province for organization purposes.

N. W. T. Report.

The report of the resolutions committee regarding the work in the Territories, was as follows '

We find conditions in the Northwest very favorable. Calgary is organized with five members and Edmonton has affiliated with the Calgary organization.

When we consider that last year we did not even have a delegate from this district we can well afford to congratulate ourselves upon the present conditions.

Apprenticeship Committee.

The report of this committee was as follows :

To the President and Members of the National Association in convention assembled :

The apprenticeship committee beg leave to submit the following report for your consideration : We wish to reiterate the statement contained in the report of the apprentice committee at our last convention, that the apprentice question has not received the consideration due so important a subject. In making this statement we wish to call your attention to the attitude of the journeymen's associations throughout our country in respect of this question inasmuch as it is practically made the most important item in the making of new agreements with local associations, their national body having many years ago pledged their support to all locals making a stand for the total abolition of the apprentice, and have met with a fair amount of success in some parts of the country.

Apart from this phase of the question, we are of the opinion that the employer could best serve his own interests by taking a more active part in the development of skilled mechanics from the youths who find employment in his shop and not leave the apprentice to the tender mercies of the journeyman who is pledged to abolish all apprentices, and who takes no interest in the youth who works with him other than to impress him with the necessity of living strictly to the union rules, which unfortunately in most cases do not tend to make first-class mechanics.

As it is impossible to attempt to take up the different phases of so large and important a question as this without more mature consideration (which unfortunately this question has not received heretofore) we would recommend that the association place itself on record as being in favor of the whole apprentice question being controlled by the employer through his local, Provincial or National body, and would further recommend that the convention appoint a representative committee, whose duties shall be to inquire fully into the conditions at present existing, and to prepare a National apprenticeship agreement or submit same to our next convention for amendment or approval by this National body.

Select Committee.

The select committee reported as follows:

Winnipeg, Aug. 10, 1905.

Master President,

Your select committee have examined all correspondence between the secretary of the National Association of Master Plumbers and all parties concerned for one year, from August 1, 1904, to August 1, 1905, and find that same has been done in a most creditable manner and very promptly attended to, and we compliment the secretary on the able manner in which he has done the work.

We find that a great deal of complaint has been caused by delay in getting out annual reports.

The Victoria correspondence in connection with charter and certificate, we recommend that the matter be open for discussion at this convention.

Re local association of Winnipeg, we feel that a meeting should be called respecting organization. Since writing a meeting has been called and we trust good result will be derived from same.

Respectfully submitted.

KENNETH J. ALLISON,
Chairman.

THE BANQUET.

Thursday afternoon was spent in a delightful sail down the Red River in the Alexandra, and at 9 p.m. the visiting delegates and supply men were the guests of the Winnipeg Association at a highly successful dinner, held in the Queen's Hotel. More than one hundred plumbers and supply men gathered round the festive board and the night was spent enjoyably. The delegates were on pleasure bent, and the night was spent in song and story, the serious speeches being few in number. President-elect Hammond presided and near him were seated Vice-President-elect Johnson, of Ottawa; Thos. Stewart, Winnipeg; R. W. Harrison, Toronto; Treasurer-elect Mahoney, Guelph; J. J. Coughlin, the British Columbia vice-president; Secretary Gordon, Montreal; Wm. Mansell, Toronto; Ald. Campbell, Winnipeg, and others prominent in association work.

The menu card was a triumph of the printer's art and a glance at the wonderfully constructed menu printed below will afford ample evidence that the chef who prepared the night's repast was also a genius. The menu explains itself:

When justice had been done to this menu of hardware and plumbing supplies, President Hammond called the gathering to order and the toast list was reached. The toast to "The King" was honored in loyal fashion and it was followed by songs by Messrs. Codd and Wray. The next on the list was the toast to

The City of Winnipeg.

The response to this toast was made by Ald. Campbell, who, in a brief speech, extended to the visiting delegates the hearty welcome of the city of Winnipeg. He regretted the absence of the witty Irish mayor of the city, whose place he was trying to fill. He was glad the visitors had had an opportunity of seeing the city, and he knew they would speak well of it on their return east.

Ald. Campbell's speech was followed by songs by Messrs. Quick, Stewart and Wray, and the gathering then honored the toast to

The National Association.

Robert W. Harrison, Toronto, responded in a short, witty speech, and he was followed by Ald. Hugh Wallace, of Hamilton. After a few introductory remarks, Ald. Wallace proceeded to point out a few of the benefits of the association. "I should like to take your minds back," said he, "to the time when we had no association. Only a few years ago it would have been utterly impossible to have such a gathering as this to-night. We were afraid and suspicious of each other then, but our fears and suspicions have been banished since we banded ourselves together in an association. Why are we here to-night? Some of us have traveled more than 1,000 miles to attend this convention, and business men would not do that for pleasure alone. When business men spend money in such ways they expect a direct or indirect dividend on their investment, and the indirect returns which we will get from this convention will be very far reaching; plumbers in all

parts of Canada will benefit from such a gathering.

"We have representatives here from Montreal in the east to Victoria in the extreme west. This is something to think about, as only a few years ago plumbers in the same town would pass each other on the street with a mere bow of recognition. At that time we cut prices on each other and sometimes did work at less than cost. We did so because we knew if we did not our competitor would cut below us to take away our customers. Competition was too keen. We thought that ten per cent. was profit and at the end of the year we wondered why we had made no money, forgetting that that small margin had been eaten up by expenses. When things became so bad they could scarcely be worse, a few men of business ability saw that the time had come for us to get together. We followed the leadership of these men and found that our competitors were not such bad fellows after all. We saw we had to make more profit and we have had it since coming together. The public press said we were robbers,—well, we had been before, for we had been robbing our families of their due. Not one man in twenty was making a profit of $3,000 per year on an investment of $10,000.

"We don't band together to 'do' the public; all that we want is to benefit our members without making prices unfair. We ask only a fair price, and the master plumbers of Canada are beginning to see this. None of us are afraid to take our books into court. We have a right to a profit of 25 per cent., and we look forward to the time when all the master plumbers in Canada will be banded together to get a fair profit. We have come as missionaries to Winnipeg with the gospel of fair profits." (Applause.)

Wm. Mansell, of Toronto, also responded to this toast. Winnipeg was undoubtedly the hub city of Canada and the Winnipeg Association the hub of the National Association, extending from Halifax to Vancouver. In ten years' time the association had covered Canada from the Atlantic to the Pacific—a showing which he thought very creditable. In two Provinces, Ontario and British Columbia, there were Provincial Associations, and in addition there were many local unions. What more could be expected in ten years? For three years Ontario has had a Provincial Association, and it now embraces in its membership almost every master plumber in the Province. Last Spring a Provincial Association was organized by Mr. Coughlin in British Columbia, and now almost every British Columbia plumber belongs to it. What more could be expected?

"I have been surprised to find," said Mr. Mansell, "that here in Winnipeg there is more work in progress to be done by 50 plumbers than there is in Montreal, Toronto, Ottawa and Hamilton combined. My advice to you Winnipeg plumbers is to go in and get your legitimate profit. Do proper work, but don't work for nothing.

"We have the same right to organize as have the lawyers and doctors, and our profession, having as its object the betterment of sanitary conditions, is just as important."

Mr. Mansell concluded his remarks with a humorous gas-stove story, which convulsed the gathering.

J. J. Coughlin, Victoria, spoke briefly to the same toast, outlining the work done in British Columbia. He had come 1,500 miles to this convention, but he would willingly travel 15,000 miles if he could be sure of a Winnipeg welcome at the other end of the journey. He hoped the National Association would meet in Victoria in 1907.

Songs by Messrs. Codd and Quick followed and then the gathering paid due honor to the toast of

The Architects.

H. R. Eade, a prominent city architect, responded briefly to this toast, pointing out ways whereby the architects and plumbers could co-operate.

After another comic song by Mr. Wray, President Hammond proposed a toast to

The Master Plumbers and Steamfitters' Supply Houses.

C. E. Gate, Winnipeg, responded to this toast. Sometimes the press said the plumbers were rogues; those who knew the facts would acquit the plumb-

Ramsay's Creosote Stains

These Stains are becoming more popular every day. Have you seen a set of our samples? If not, why not drop us a card to-day and ask for prices and samples? You may require these any day. Many buildings will call for Ramsay's Creosote Stains this Fall.

ers and indict the public. If the plumbers would do the class of work asked for the death rate would soon be doubled and tripled. Men build houses to rent them and they don't care what kind of plumbing is put in provided it is done cheaply. A by-law compelling first-class plumbing was urgently required in all cities and towns in Canada.

John Stevens, of the John Stevens Co., Limited, made a humorous speech as a supply man. He had come to the conclusion long ago that if the supply man wanted to "do" the public he must use the master plumber. Some of the speakers had indulged in ancient history, giving the story of the beginnings of the association. He would go back farther than the others. The master plumbers were forming an association in Pompeii centuries ago when Providence frustrated their evil designs by an eruption of Vesuvius. He himself was the son of a reformed plumber; he was a supply man.

Stephen Mellon, Hamilton, also responded to this toast, expressing his pleasure in visiting Winnipeg. Ald. Wallace and he had been given their instructions before leaving Hamilton. Mr. Wallace was to investigate the Winnipeg sewerage system and the speaker was to examine the waterworks. He did not know the result of his colleague's investigations, but he would report that the Winnipeg water was good to wash in; that was the only use the natives seemed to make of it.

John McKechnie, president of the Vulcan Iron Works, responded briefly to the same toast. He said he was the oldest supply man in the Province, as he had established the first iron foundry in Western Canada in 1874.

After a song by Mr. Stewart, the toast to "The Ladies" was responded to by W. K. Bearisto. The toast to "The Press" was omitted owing to the lateness of the hour. The gathering dispersed after singing the National Anthem.

CONVENTION NOTES.

Wednesday evening the delegates attended a very pleasant social gathering at "The Elks" club room.

Tuesday evening the sound of the cow bell told where the plumbers were to be found. O. T. Emerich and J. C. Covington, the representatives of the United Brass Mfg. Co., distributed small brass bells as souvenirs, and the night was made merry with their music.

H. R. Flett, the Toronto manager of the Taylor-Forbes Co., had an attractive exhibit in the Queen's Hotel of the new "Sovereign" radiators. The delegates were all interested in the new radiators and favorable comments were many.

Taylor-Forbes Co. distributed tags, which were worn by all the delegates, announcing that the wearer was "out for a time," and giving his name and address with instructions to "ship me home."

The Glauber Brass Co. distributed handsome souvenirs of brass goods very artistically designed.

H. Mueller Mfg. Co. were represented by F. B. Mueller and Will C. Heinrichs. At the banquet they distributed neat tie pins as souvenirs.

General regret was expressed at the illness of President Ross and Secretary G. H. Kirkham.

Very attractive badges with red, white and blue ribbons were worn by the delegates.

The delegates were the guests of the Fairbanks Co. at the conclusion of the business sessions.

Among the local supply men noticed at the Queen's Hotel, the convention headquarters, were C. D. Waldon, of the Pease-Waldon Co.; G. Griffith, of G. Griffith & Co., and John Stevens, of the John Stevens Co., Limited.

Four of the delegates, W. Mansell, Toronto; S. Mellon, and Alderman Hugh Wallace, of Hamilton, and H. Mahoney, of Guelph, made a trip to Brandon at the close of the convention; while Mr. John A. Gordon, of Montreal, with his wife and daughter, who are accompanying him, go on to Vancouver.

Mr. John A. Gordon and Mr. George C. Benman, of Montreal, are peculiarly interested in Winnipeg, as it is their first visit since 1885, when they went west in the Montreal Garrison Artillery, of which Mr. Benman was sergeant-major. Their first duty on arriving was to bury those killed at Batoche, and the first shots they fired were over the graves in St. John's cemetery. Mr. Benman remarked on the changed aspect of Winnipeg since then. At that time the artillery camped in front of Fort Osborne barracks and they waded in mud in many of what are now the best portions of the city. Where old Fort Garry stood he now sees only its gateway, to remind him of the stirring scenes of twenty years ago. His company went west as far as Regina, and when the rebellion was quelled they returned with the other garrisons and spent a short time in Winnipeg before leaving for home.

Mr. E. A. Rogers, Toronto, represented the James Robertson Co. at the convention, and his geniality won many friends.

One of the most popular supply men at the gathering was Mr. W. J. Fulton, who covers the western territory for the Dominion Radiator Co. He was busy at the jollying game as usual.

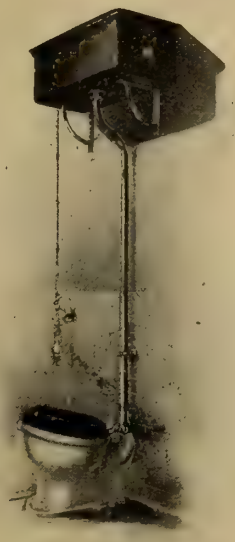
Toronto's youngest supply house, R. J. Cluff & Co., was well represented by "Billie" Cluff, who was kept busy shaking hands with his old time friends on the road.

Mr. James Drew, Winnipeg, representative of the Gurney Foundry Co., kept the good qualities of Gurney goods before the delegates by his own good qualities as a conversationalist.

SEWAGE SYSTEM OF PARIS.

THE city of Paris maintains four sewerage farms, having a combined area of nearly 14,000 acres—one each at Gennevilliers, Acheres, Pierrelaye and Triel. The former has been in operation for thirty-five years or more, and there is conducted what has come to be called the "model garden for the agricultural utilization of sewage." The sewage of Paris amounts to more than 185,000,000 gallons a day. About 160,000,000 gallons of this are pumped at Clichy, and from there are taken through conduits—at some points, after repumping—to the reduction works operated in connection with the four farms, one of which is eighteen miles from Paris. At one point the rise of the moving sewage is 118 feet above the level of its discharge from the city pipes. The lands constituting the farms are either owned outright or leased by the city, and their total capacity for the absorption of the sewage-fertilizers is upward of 57,000,000,000 gallons a year—an amount that already calls for additional farm lands to meet the steady increse in the volume of the sewage. The whole system is not only a magnificent engineering work but also constitutes a rational, scientific and business like solution of what might now be a serious municipal problem at the French capital had not her officials given the subject intelligent attention forty years ago.

DIAGRAMS OF LARGE SYSTEMS.



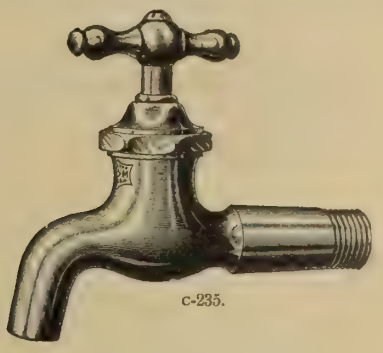
MASSES of piping used for various purposes in large buildings, has necessarily resulted in the use of a large number of valves for controlling the different parts of the system. As the multiplicity of valves and the ramifications of the piping are sufficient to confuse the mechanic or engineer during the construction of the building, the layman naturally is apt to be still more in the dark in regard to the uses of the various valves and pipes after the completion of the work. To avoid mistakes in the use of the valves, and in order to indicate the functions of each pipe, in many large buildings all the valves are now marked with a numbered tag attached to the wheel of the valve. In addition, a chart is provided, made in different colors, corresponding to the various uses of the pipes, and which also shows the position of the numbered valves. The chart is accompanied by a key giving the number and location of each valve, together with its use. Both are framed and kept in an accessible place where they may be readily found.

These diagrams and keys are very useful in case of the sudden breaking of any portion of the system, as any one, although unaccustomed to the equipment, could in a few moments shut off the portion of the system affected by the break without interfering with the rest of the installation. For example, suppose a break should occur in the sixth floor hot water supply; by consulting the key it is found that by closing the valves Nos. 9, 16 and 33 and opening No. 12 the hot water supply will be cut off above the fourth floor and properly drained. The diagram shows the location of these valves and the tag enables any one to secure the correct valve at once.

Charts and keys of this kind in cases of emergency will save many times their cost and should be used whenever a system is at all complicated.

The Plumbers' and Steamfitters' Union of Toronto have withdrawn their delegates from the Toronto Labor Council, giving as a reason the excessive number of meetings the delegates had to attend. They still retain their connection with the Federated Building Trades' Council.

Some Men Are Dead And Don't Know It.



You've met that kind of man.

PLUMBING MARKETS

QUEBEC

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 25, 1905.

LITTLE change is noticed in the condition of the plumbing markets this week, but last week's tone is accentuated. The scarcity of ingot casting copper is even more noticeable, some of the largest producers claiming that the shortage is largely the result of the hot weather, and the consequent inability of workmen, in the refineries, to put out the normal amount of goods. But this cannot wholly account for the condition in which buyers find themselves to-day. We must necessarily conclude that an unusually heavy demand has helped to reduce stocks, while it must be admitted that manipulation by the "bulls" has not been without its effect.

Be that as it may, the supply houses are facing a serious scarcity of copper, and, as reported in Hardware and Metal last week, brass manufacturers have withdrawn their prices on nearly all lines. Jobbers are still hoping that the situation is only temporary, but the consensus of opinion is that it is here to stay, and, although prices have not yet been advanced on the strength of reduced stocks, we confidently predict a jump in the near future.

The approach of Fall is giving an added strength to the pipe market, as many house-owners are anticipating the Winter by repairs and extensions to their plumbing.

The continued firmness of lead pipe has, as yet, not affected the price of lead pipe, the inference being that stocks of good size are in the hands of the trade.

Range Boilers—An active demand is reported. Prices are quoted as follows: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—In spite of good sales and the high price of pig lead, we still quote lead pipe as follows: Discount 30 to 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—Conditions remain as before reported. Our prices are: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—Manufacturers report a much better demand which is expected to continue throughout the Fall. We quote: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent. 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch 48 per cent.; 1-2 inch, 63 per cent. 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—No special feature is to be noticed, the general activity being largely shared by soil pipe and fittings. We give prices: Standard soil pipe, 50 per cent. off list. Standard fittings 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 25, 1905.

BUSINESS continues very good this week, and indeed some of the supply men report an increase this week over last. Some large orders for plumbers' supplies have been filled this week. The manufacturers are kept very busy to supply the demand from the supply houses.

Prices remain unchanged in all lines and are firm for the most part. The advance expected in lead pipe because of the advancing price of raw material, has not as yet materialized. However, the advance is still looked for. Iron pipe also, it is surmised, may go up, and as a consequence there is not a little stocking in these two lines.

Lead Pipe—The looked-for advance has not as yet taken place, but the continued firmness in the raw material points to an almost certain advance in the near future. We quote as follows: **Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.**

Soil Pipe and Fittings—Demand is very keen, but supplies are plentiful We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Buying is heavy and prices continue very firm. Our quotations are as follows: Cast iron elbows tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers— The large amount of building accounts for the general activity in buying. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Some dealers are buying large stocks in anticipation of an advance. Prices are firm. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder— Last week's prices hold firm. Our quotatoins are as follows: Bar solder, half and half, guaranteed. 19 1-4c.; wiping solder at 17 1-2c., and refined 17 3-4c.

Enameled Ware—Demand continues exceedingly strong for Canadian ware, but manufacturers keep well up with their shipments. Our quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50, special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

AN IMPROVED SOLDERING ACID.

OWING to the value of the information, we reprint the following article on soldering acid by Charles H. Poland, which was presented in the Brass World:

The method of making ordinary soldering acid is well known and there are several objections to its use. One disagreeable feature is the flying or spattering when the soldering iron is applied to it. The other portions of the work not only become covered with it, but the hands of the operator suffer to a greater or less degree. If work is soldered in which it is necessary that the acid shall not come in contact with any but the portion which is to be soldered, the

HOLLOW-WARE

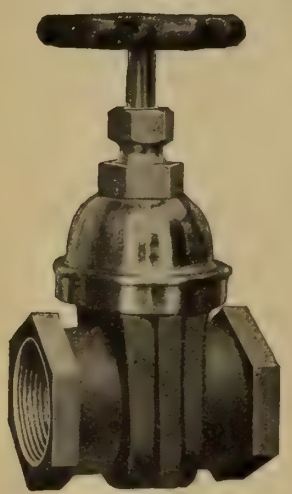
MONTREAL, TORONTO, WINNIPEG, VANCOUVER

usual form of soldering acid cannot be used.

Such a difficulty has confronted me in past times, and I actually had to dispense with the use of soldering acid and use rosin and oil on account of the trouble which was caused by the acid spattering upon the finished portions of the work. The article which I have had to solder is a high grade of coach lamp, and it is necessary to solder certain portions of it after other parts have been finished. For this reson no spattering of acid upon the finished portions could be tolerated. No matter how careful the operator was and no matter how the acid was made, the results were the same, and in desperation I returned to rosin and oil with all its accompanying disadvantages. It is well known that the strongest joint may be obtained with soldering acid, and that rosin, no matter how well applied, fails to give the same results.



I have found that a very satisfactory soldering acid may be made by the use of ordinary soldering acid for the base and by introducing a certain proportion of chloride of tin and sal-ammoniac. This gives an acid which is superior in every way to the old form. The method of making it is as follows:

To make one gallon of this soldering fluid take three quarts of common muriatic acid and allow it to dissolve as much zinc as it will take up. This method of course, is the usual one followed in the manufacture of ordinary soldering acid. The acid, as is well known, must be placed in an earthenware or glass vessel. The zinc may be sheet clippings or common plate spelter broken into small pieces. Place the acid in the vessel and add the zinc in small portions so as to prevent the whole from boiling over. When all the zinc has been added and the action has stopped, it indicates that enough has been taken up. Care must be taken, however, to see that there is a little zinc left in the bottom, as otherwise, the acid will be in excess. The idea is to have the acid take up as much zinc as it will.

After this has been done there will remain some residue in the form of a black precipitate. This is the lead which all zinc contains and which is not dissolved by the muriatic acid. This lead may be removed by filtering through a funnel in the bottom of which there is a little absorbent cotton, or the solution may be allowed to remain over night until the lead has settled and the clear solution can then be poured off. This lead precipitate is not particularly injurious to the soldering fluid, but it is better to get rid of it so that a good, clear solution may be obtained.

Now dissolve six ounces of sal-ammoniac in a pint of warm water. In another pint dissolve four ounces of chloride of tin. The chloride of tin solution will usually be cloudy, but this will not matter. Now mix the three solutions together The solution will be slightly cloudy when the three have been mixed, and the addition of a few drops of muriatic acid will render it perfectly clear. Do not add any more acid than is necessary to do this, as the solution would then contain too much of this ingredient and the results would be injurious.

This soldering acid is used in the same manner as any solution of this kind, but it will be found that it will not spatter when the iron is applied to it. It has also been found that a poorer grade of solder may be used with it than with the usual soldering acid. From my experience I have found that a solder composed of two parts of lead and one of tin, works equally as well and produces fully as strong a joint as that obtained

with the customary half and half solder. An experience extending over some time has demonstrated that this acid will do what I claim for it, and I cheerfully recommend it to those who are desirous of improving their soldering acid.

UNIQUE CELEBRATION AT "SOO."

An international celebration took place recently at the "Soo," the occasion being the fiftieth anniversary of the opening of the first Sault Canal. While the United States take to themselves the honor of building the first Sault Canal, the truth is Canada was many years in advance of them. As long ago as 1797 a canal on the Canadian side was constructed. The Northwest Co. was at that time competing with the Hudson's Bay Co. for the fur trade. As will be remembered, the Northwest Co. was a Canadian corporation, with headquarters at Montreal, while the Hudson's Bay Co was English. The Hudson's Bay people operated via James Bay, drawing their supplies that way, and sending out their furs by the same route. The Northwest Co., on the other hand, traded through Canada. That corporation found it necessary to send its batteaux up the Georgian Bay, and across the head of Lake Huron, to Lake Superior. In order to reach the latter lake the Sault Rapids had to be overcome, and here the canal was built. The remains of this structure, which was abandoned when the company failed, are extant to this day, and it is understood that they perform the duty of a flume for the power company.

PLUMBING GOSSIP.

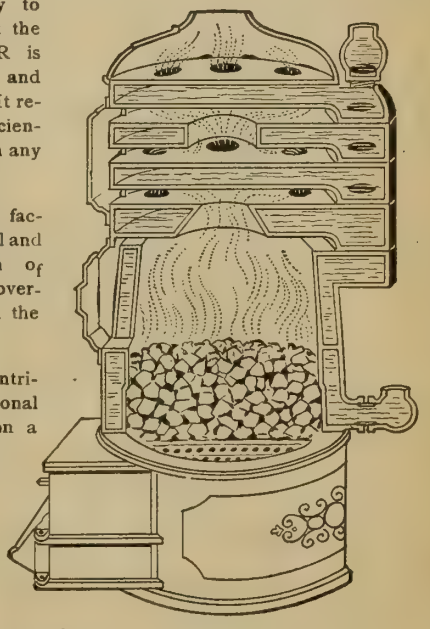
Montreal delegates to the great Master Plumbers' Convention in Winnipeg report that they were surprised and delighted with the general air of prosperity in that city. It was greatly in advance of what they expected to find.

* * *

Mr. J. A. Gordon, secretary of the National Association of Master Plumbers, has not yet returned to Montreal from the west. He will remain in the land of wheat until the first week in September.

* * *

The plumbing shop of Geo. Ross & Co., Brockville, Ont., was burglarized recently and $2,200 in cash taken from the till.



* * *

Mr. Wm. Parrott, plumber, Collingwood, was in Toronto this week on a business trip.

OXFORD HEATING SYSTEM

("B" SERIES)

BOILERS and RADIATORS.

Economy and Efficiency You can safely say to every customer that the OXFORD BOILER is the most perfectly constructed, economical, and efficient heating apparatus ever produced. It represents sixty years of the most careful and scientific effort that has ever been expended upon any article of its kind.

Over-hanging Fire Pot One of the essential factors in its economical and prolific distribution of heat is the construction of the fire-pot whose overhanging walls give the greatest amount with the minimum combustion of fuel.

Triangular Revolving Grate The grate is a contrivance of exceptional merit. It is built on a triangular revolving basis with revolving bars which allow the maximum of air space without permitting the coal to fall through, and is dumped with a slight turn.

No Washers or Gaskets The OXFORD BOILER is built with iron to iron push nipple connections—there are no washers or gaskets which are the weak factors in all other goods of this kind.

OXFORD HOT WATER and STEAM RADIATORS

form a combination with the OXFORD BOILER and give universal satisfaction. They are cast iron and will not rust if the water lies in them all summer.

No Fibrous Material Used The Oxford Push Nipple, made of steel, with which all connections of radiator loops are made, obviates the need of any kind of washer, and absolutely prevents leakage. The Oxford gives the highest degree of radiation proportionate to size, and even distribution of heat throughout the house.

We cannot give complete details here but suggest that you write for our handsomely illustrated catalogue which will inform you on every point.

MISTAKEN IDENTITY.

Owing to a similarity of names, a slight mix-up occurred in illustrating the report of the plumbers' convention in last week's Hardware and Metal. Mr. J. A. Gordon, the Catherine street plumber, Montreal, was elected secretary of the association, but the illustration represented Mr. Jas. A. Gordon, a well known Montreal business man who is selling agent for the St. Lawrence Sugar Refinery. The latter gentleman was no doubt placed in a position new and unfamiliar to him, much to the surprise of his many friends, who were not slow in making inquiries regarding his having adopted a new line of business.

PUTTY FOR GAS PIPES.

A joint for gas pipes which is said to be much cheaper than the usual white lead cement is made by working up equal weights of Roman cement, brick earth, and quicklime with linseed oil. Another putty is made with melted pitch, brickdust, and oakum. The metal should be warmed, and the putty, made in such proportions that it is plastic to the finger, is wiped on. This last recipe is specially useful when pipes are joined by the small end of one pipe being fitted into the socket or enlarged end of another.—English Plumbers' Review.

ROOM FOR WESTERN BUSINESS.

THE Maritime Provinces are bewailing the fact that their population is showing practically no advance. Their need, however, is not so much an increased population as it is for a few more men with the energy and ability to build up large manufacturing plants such as are being established in western cities and towns.

Mr. Joshua Peters, general manager of the Record Foundry and Machine Co., Moncton, N.B., which firm was one of the first Maritime firms to appreciate the value of the western market, and to establish an agency in Winnipeg, said in conversation with a representative of Hardware and Metal, that the Maritime Provinces offered many advantages to manufacturing firms and that there was no reason why manufacturers in Nova Scotia and New Brunswick should not receive their fair share of western trade.

Asked as to whether freight rates were not a serious handicap, he replied that

there was a difference of only 6c. to Winnipeg and the west between their freight rate and that of a well known firm in London, Ont., and that this was more than made up for by the lower price of coal in the Maritime Provinces.

Labor, too, was somewhat cheaper in the east, and while they had had two strikes within the last few years still as a general rule labor difficulties were very few. Many skilled mechanics come over from England, and most of these seek work in Halifax, St. John, or neighboring towns.

A SUCCESSFUL CANADIAN.

MR. LAWRENCE R. GREENE, general superintendent of the department of publicity of the Sherwin-Williams Paint Co., Cleveland, Ohio, called on Hardware and Metal in Toronto on Saturday last. Mr. Greene, who has been spending his vacation in Toronto, is a young Canadian who has earned distinction in the States, having been for seven years with the "S.W." Co. at Cleveland. Prior to that time he was employed in Bertram's hardware store at Hamilton, Vokes hardware store, Toronto, and the Sherwin-Williams branch offices in Toronto.

Mr. Harry Dwight Smith, who was head of the department of publicity, has become assistant to the general manager, and his many Canadian friends will be glad to hear of his promotion, as well as to learn that his former position is to be filled by Mr. Greene, a former Canadian.

Regarding Hardware and Metal, Mr. Greene stated that it had a warm place in his heart as well as a prominent place on his desk. Being a former hardware clerk, it is but natural that he should be interested in the Canadian hardware paper, but he states that regardless of his former associations, there is no American hardware paper which he finds so interesting and newsy as Hardware and Metal, this opinion being shared largely by Mr. Smith, his former chief. The Sherwin-Williams Co., says Mr. Greene, are conservative advertisers in trade papers, but use liberal space in Hardware and Metal because they have found it to give unequalled results. Mr. Greene proved his interest in the paper by making some valuable suggestions for its improvement, an action which is greatly appreciated by the editor and publishers.

TOO ANXIOUS FOR BUSINESS.

AT a recent merchants' convention one of the speakers attributed many of the ills of the trade to the retailer's over-anxiety to do business, says the Hardware Trade.

Prices are cut below profitable figures and bad debts made by too much anxiety to see the volume grow. This same anxiety gets in its work among competitors and results frequently in a demoralization that proves disastrous.

But what are we going to do about it? That is the question. Education is the only way out. You cannot check a man's ambition without destroying his usefulness. The only thing to be done is to teach him where his anxiety to do business which is his ambition is likely to turn off on the wrong road.

This over-anxiety to do business is not confined to the retailer. We think we see traces of its work in wholesale circles frequently. Every now and then some retailer goes straight up the flue of failure whose whole career is a result of the over-anxiety of some wholesale house to do more business in that particular community

So anxious that it took a long chance and lost. So anxious that it bolstered up competition for good merchants and, perhaps, assisted in demoralizing trade conditions in that community for the time being.

Each year's history of failures contains a good proportion of this class. No special course in education is needed for the wholesaler. He gets his lesson burned in with such big chunks of loss that he is sure to profit by it. But the over-anxious reach for more business never disappears in wholesale competition, and each year's crop of failures of this class is about the same.

After all, it gets back to the nature of the man and to the kind of a head which is doing the thinking. If he is of the kind that can be stampeded by reports of what his competitor is doing, or if he forgets net profit in his wild desire to push his volume over a certain figure, he will stumble into the pitfall which over-anxiety prepares for all such. The best the bystanders can do is to wave the danger signal frequently.

A. C. Waltx & Co., Port Arthur, have been awarded the contract for the plumbing in the high school in that town. The firm have also secured the contract for the installing of a lighting plant at Fort Frances. At present the firm are finishing the wiring in R. A. Ruttan's new residence.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

London Office and Warehouse—48 Lime St. New York City Branch—230 Broadway.

For sale by ALL PROMINENT CANADIAN HARDWARE JOBBERS.

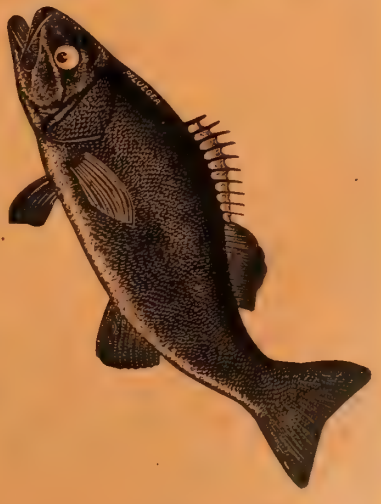
"Open Ring" Pattern

Niagara Cow Ties

Possess certain obvious advantages which have brought them into exclusive use throughout all the great dairying sections in Canada and the United States. We have made these Cow Ties for many Fancy Dairies in the past, and they have now become a regular item of the Hardware Dealers' Stock.

The SWIVEL is malleable and is much stronger than any Steel Swivel, while its action is so free that it never sticks on account of rust.

The TOGGLES used on our Cow Ties are forged from BESSEMER STEEL, by a patented process.



The TOGGLES are so arranged as to always hang at right angles to the Chain, which prevents their becoming unfastened from same.

In a crowded stable this method of fastening confines the animal more and obviates all danger of being stepped upon when lying down.

ONEIDA COMMUNITY, Limited

The Fisk
Detachable Motor Tire

Has its greatest elasticity at the sides, where it should be, giving unusual resilience.

Has a tread of extraordinary strength and toughness, giving great durability.

Has a firm and solid base so that the tire can be run flat, if need be, with little injury and with safety.

Easy and quick removal or attachment, with a common wrench.

Absolute freedom from creeping or rolling.

Manufactured in Canada solely by

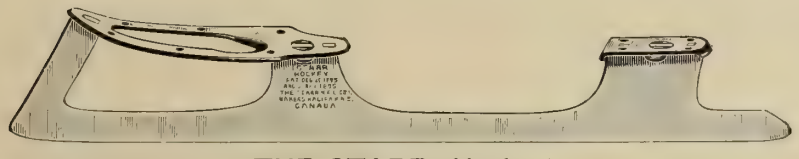
OUR LEADERS

Easy to Sell

The Line that is Sure to Please

REGAL

As used in all Senior Champion Leagues. Light in weight and very fast.



THE MIC MAC (Featherweight)

The ideal Hockey Skate. This skate is used for very fast forward work.

THE MIC MAC (Hockey)

Will stand very rough work, and is highly spoken of by all players of Hockey.

THE STARR (Hockey)

This skate is the lightest Hockey Skate made, and also a skate that gives every satisfaction. Made in highest grade only.

THE STARR MFG. CO., LIMITED

DARTMOUTH, N.S.

Also makers of the celebrated Mic Mac Hockey Sticks.

"ROYAL"
Low Tank Combinations

We have been making these combinations for some years, and one secret of our success in this line is that we have never yet said "good enough."
The first "Royal" Low Tanks we made were excellent—but those we are now offering are much improved, making a Water Closet Combination which is

"Fit for Any Bath Room"

TURNED
G 29 1905

Combination.

RETURNED
AUG 29 1905
To Owner
see Book 39
page 40

No. 08 Combination.

This combination is especially desirable in School Houses, Orphan Asylums and similar institutions, where the users, through carelessness or the lack of knowledge, would not flush a regular Pull or Push Action Combination. May also be used as a Urinal.

Some "Royal" Good Points:

The Tank is so ventilated and constructed that it will not sweat. The lining is of copper—no solder exposed to the action of the water.

The Valve and Ball Cock is perfect in construction—not complicated, and always ready—always tight.

The Woodwork is well made and highly finished.

The Closet will not craze—has a deep seal, extra large passage, and sharp action. Flushes better than a high tank, and makes comparatively no noise.

If we have your orders, accept our thanks. If you do not handle "Royal" Low Tanks, may we not quote you prices delivered in your town?

A. C. LESLIE & CO., MONTREAL
Managers Canadian Branch

Do you know that all Sad Irons bearing the name of "Mrs. Potts" are not alike?

The Genuine Mrs. Potts Cold Handle Sad Irons

are made in Canada only by us. You can always tell the genuine iron by the name "Woodyatt" stamped thereon. It is distinguished from the non-genuine by the loose or detachable plate on the top of every iron. This device is valuable in that it enables the iron to retain the heat far better than the non-genuine solid iron. Then, too, the finish on "Woodyatt" stamped irons is distinctly superior. All parts fit; handles are interchangeable. The retailer who handles our make can make a sale every time; he can't with the non-genuine sort.

Always carried in stock. Order through your jobber.

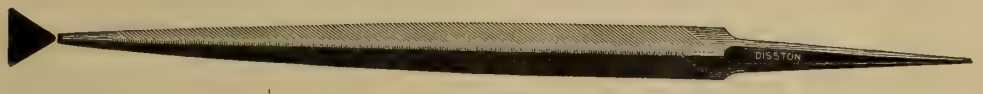
You know that every article that leaves your store is some kind of an advertisement for the store.



If it is good it is a good advertisement, if not it is a bad one. This applies just as much to Files as it does to everything else you sell. In fact, a poor File is the poorest thing you can offer any mechanic.

You cannot afford to sell anything but the best goods to your best customers. Disston's Files, like Disston's Saws, have stood the test of time.

Ask a mechanic who has used these Files and he will tell you the same story.

Disston's Files do not cost any more than a second grade, why not have the best?

Strand Wires and Other Things

You know the importance of Strand Wires in Wire Fencing. If they haven't resilient power there will be, as a result of contractions and expansions caused by cold and heat, undue strain on the top or other wires, a slackness in the strand wires that soon causes a continuous-stay fence to lose its original neat appearance. In the **Dillon Hinge-Stay Fence** every strand, whether heavy or light, is made of High Carbon Hard Spring Wire, besides being extra well galvanized. That, with the HINGED-STAY, is why "Dillon" fences never get bent down and disfigured as you see the average wire fence. Think of "Dillon" superiority here alone when reading the next ad.—**"Why Dillon Stays Stay."**

Canadian National Exhibition

THE formal opening of the Canadian National Exhibition in Toronto by Hon. J. P. Whitney, Premier of Ontario, on Tuesday was attended by the usual interesting ceremonies, speeches, directors' dinner, and, as a special feature, music by the Irish Guards' Band and drill manoeuvres by the sailors of Prince Louis of Battenburg's squadron now lying at Quebec. A tour through the various buildings and show places by Hardware and Metal's representative tends to bear out the opinion of Dr. Orr, manager, and the board of directors that the Exhibition of 1905 will eclipse all previous ones. In many of the departments, such as the mechanical, electrical, and agricultural, the entries are unusually large and the exhibits of a high class. The introduction some years ago by several of the leading Canadian manufacturers of actual working appliances from their factories and shops, showing the processes of manufacture of their products, is more extensively followed this year. This feature is interesting and instructive and introduces the public more closely to a knowledge of what they wear and use, and also leaves the impression that Canada as a manufacturing country is rapidly advancing to the front.

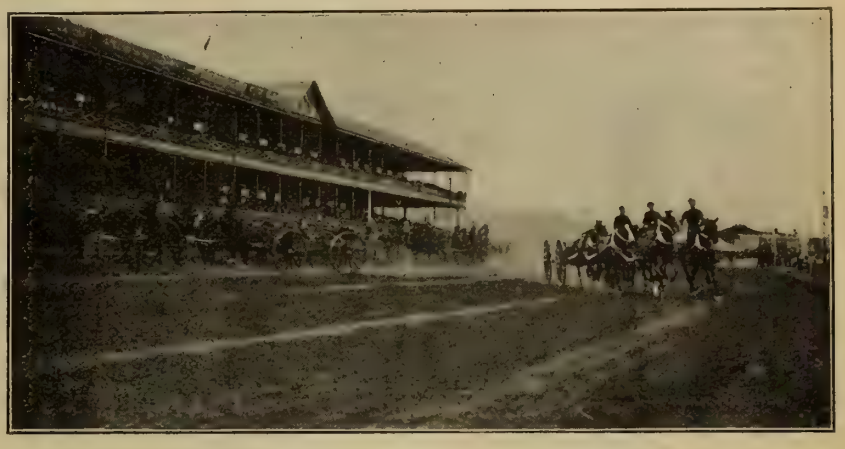
What There is to See.

Hardware merchants will, of course, be interested in the spectacular and amusement features of the Exhibition: the fireworks, the grand stand show, the soldiers' and sailors' drills, the side shows, and the hundred and one attractions brought to Toronto at greater or lesser expense. The live stock judging and parades will also attract many, Canada's reputation for breeding fine animals having developed an interest in this industry amongst all classes of people. But by far the most important object the hardware merchant has in visiting the Exhibition is to see the exhibits of the manufacturers and jobbers in his own line of business. Every year there has been an improvement in this respect and there are now in every building exhibits of interest to the hardwareman. There has been no falling off this year and Hardware and Metal notices that more attention is being paid to a better arrangement of the goods shown and the display is of a higher order than in any previous year.

The Stove Display.

Entering the Stove Building at the main doorway, the first exhibit to attract attention is the magnificent display made by the Gurney Foundry Co. to the left of the doorway. Oxford stoves, ranges and furnaces form the central feature of the display, while other lines manufactured are shown to advantage. Next to this is the George Sparrow Co.'s showing of restaurant supplies, and in the corner at the opposite end a large display of Moore's Happy Home ranges. Clare Bros. have the next space for their Hecla furnaces and Peninsular ranges. The Pease Foundry Co.'s exhibit is one of the most striking in the building, next to it being the neatly arranged display of the Moffat Stove Co. In the centre of the building a display which occupies a prominent position is that of the Western Foundry Co., Wingham, makers of Huron stoves. Next to them are the exhibits of the Walker Steel Ranges, made in Grimsby, a fine display of heaters by Telephone City Stoves, Limited, Brantford, and the Favorite ranges made by the Doherty Mfg. Co., Sarnia. On the opposite side, showings which arrest the attention of the visitor are those made by the Guelph Stove Co. (formerly the Guelph Foundry Co.), the Grundy Stove Co., Guelph, the Canadian Heating and Ventilation Co., Owen Sound, and the mantels and gas heaters exhibited by the Archer Co., Toronto. Some interesting souvenirs are given to stove dealers by the exhibitors and a visit to the building will repay any hardware merchant who visits the Exhibition. The "Carrie Nation" axe presented by the Grundy Co. is a particularly pleasing memento.

Plumbing and Paint Exhibits.



One of the handsomest displays in any of the buildings is that of the James Morrison Brass Mfg. Co. at the central entrance to the Machinery Building, the arrangement of their plumbing and engineering supplies and electrical fixtures being most artistic. Equally well arranged, but of a different class, are the exhibits of enamelled ware, etc., made by the Ontario Lead and Wire Co., and the James Robertson Co. in the Manufacturers and Liberal Arts Building. The feature of the former display is the "Made in Canada" line of Standard Ideal enamelled ware, while the Robertson Co. make a special feature of the "Naturo" closet.

Very few paint and varnish displays are made, but the excellence of the few make up in a measure for the absence of the many. The Imperial Varnish Co.'s exhibit in the Main Building is especially pleasing and instructive, while the wax model of the monument to Shakespere, shown in the exhibit of the Canadian Oil Co. in the same building, is also very handsome. The Blackwell Varnish Co. have their display in the Transportation Building.

A General Survey.

On the lake front near Society Row the various wire fence companies have made an excellent showing of their fencing. All report an excellent season's business, the demand for wire goods being steadily on the increase. A feature of the trade is the large volume of business done through hardware merchants, they having pushed the line so successfully that it is now looked upon as essentially a hardware line.

Stock foods are not shown by so many companies as a year ago, but the strong and older-established companies have good displays.

The Artillery Drive—Canadian National Exhibition.

Binder twine and washing machines are to be found in the Implement Building, here also being shown many of the smaller lines of implements which can be handled to advantage by hardware dealers.

Canadian Fairbanks Co. have their display in Machinery Hall, here also being other scale displays, the Bowser oil storage system, the Canada Metal Co.'s exhibit, and other interesting displays.

In building exhibits, those of the Metallic Roofing Co. in the Main Building, the Philip Carey Mfg. Co. in Machinery Hall, the Le Page Door Check Mfg. Co. in the Women's Building, the J. A. & W. Bird Co. on the grounds, are all interesting, while there are also some cement block machines shown.

Taking the Exhibition as a whole, the number of exhibitors this year is 1,771 some of whom have five or more entries of goods. In the industrial exhibits are: Manufacturers and liberal arts 116,

transportation 36, implements 50, stoves 16, machinery 34, women's work 8, Manufacturers' Annex 22, Dairy Building 8, automobiles 6, and on the grounds outside of the buildings 12.

Interesting to Hardwaremen.

It will be seen that there is much of interest to readers of Hardware and Metal at the Exhibition and a visit to Toronto at this time will well repay the time and money spent. This is an opportune time also to pay a visit to the jobbing houses, special preparations having been made to show customers the most seasonable and up-to-date lines of goods. The growth of Toronto and the wonderful development of Canada's manufacturing industry should also provide reasons for a visit to the Exhibition at this time.

As it has been impossible to note all the exhibits of interest to our readers in an afternoon's walk through the grounds and buildings the following more extended list is appended:

Manufacturers and Liberal Arts Building—The Ontario Rubber Co., International Gas Appliance Co., Limited, Toronto Brass Mfg. Co., Berlin Robe and Clothing Co., W. H. Dunne, Library Bureau of Canada, Limited, Kemp Mfg. Co., A. D. Fisher Co., Limited, Singer Sewing Machine Co., Limited, Office Specialty Mfg. Co., Limited, National Cash Register Co., Canadian Oil Co., Limited, Imperial Varnish Co., Limited, Standard Silver Co., Limited, The James Robertson Co., Limited, International Stock Food Co., The Metallic Roofing Co. of Canada, E. W. Gillett Co., Ontario Lead & Wire Co., Limited, United Typewriter Co.

Stove Building—Archer Light, Heat & Power Co., Limited, Clare Bros. & Co., Charles F. Rees & Co., The Walker Steel Range Co., Limited, Canada Malleable and Steel Range Mfg. Co., The Grundy Stove Co., The Western Foundry Co., D. Moore Co., Burrow, Stewart & Milne, Guelph Foundry Co., The Gurney Foundry Co., Telephone City Stoves, Limited, Doherty Mfg Co., Pease Foundry Co., Moffat Stove Co.

Implement Building—The Canadian Ladder Co., Johnston Oil Engine Co., Limited, Monteith, Nixon & Co., The London Cement Brick Mfg Co., Clydesdale Stock Food Co., Limited, The Paris Plow Co., Limited, The Steel Trough & Machine Co., Limited, The Berlin Woodenware Co., Davis Acetylene Gas Co., St. Thomas Acetylene Mfg Co., The Brantford Cordage Co., Limited, Louden Machinery Co., The Ontario Wind Engine & Pump Co., The Bach Specialty Co.

Machinery Hall—D. K. McLaren, S. F. Bowser & Co., Borden Co., C. Wilson & Son, Dominion Belting Co., The E. Long Mfg. Co., The Canadian Fairbanks Co., Canada Metal Co., Canadian General Electric Co., Philip Carey Mfg. Co.

Manufacturers' Annex—The Anglo-Canadian Supply Co., Pulvo Mfg. Co., Raimes & Co., Metal Polish Co., Domestic Specialty Co.

Transportation Building — Blackwell Varnish Co., D. Conboy, Samuel Trees & Co., E. H. Heney Co., Limited, Wm. Gray & Sons Co., Toronto Welsbach Light Co., The Dunlop Tire Co., The Toronto Pole & Shaft Co., Canada Saddlery Harness Mfg. Co., Tisdale Iron Stable Fittings Co., Geo. A. Rudd & Co., Guelph Carriage Top Co., C. Kloepfer.

Women's Building—Lepage Door Check Mfg. Co., M. N. Dafoe.

On Grounds—Page Wire Fence Co., Limited, McGregor-Banwell Fence Co., Pittsburg Perfect Fence Co., The H. R. Lamb Fence Co., The London Fence Machine Co., The Frost Wire Fence Co., Limited, The Canadian Portable Fence Co., The Canadian Steel & Wire Fence Co., The O. S. Wire Fence Co., J. A. & W. Bird & Co.

Automobile Building—The Ford Motor Co., and Canada Cycle & Motor Co.

Wire Fence Exhibits.

The Page Wire Fence Co.'s display has been arranged in a most attractive and telling manner, a log cabin having been erected out of goods manufactured by the Page Co. Fifteen miles of fencing and 67 Page metal gates are used in the construction, the general effect being of a high order. The "White Brand" of the Page goods gives their wire a fine appearance and the sixteen standard varieties of their fencing allow of a fine display. After the wire is galvanized it is given a coat of white enamel paint, this making the fencing popular amongst hardwaremen for display purposes. Mr. Dyer, the Toronto representative of the company, states that more inquiries have been received this year than ever before from hardware merchants, and the business is passing out of the hands of farmer agents into regular trade channels.

Another interesting exhibit is that of the Owen Sound Wire Fence Co., their arrangement of the "Dillon" fencing being very artistic. The "Dillon" hinge stay has won its way to a prominent place in Canadian wire fence manufacture and it is known wherever hardware stores exist in Canada. Mr. R. R. Goldsmith is in charge of the exhibit and he states that wherever the Owen Sound fencing has been introduced sales have steadily grown in quantity, this proving the quality of the goods. The "Dillon" is easily erected, is strong, retains its appearance well, has no locks to rust, break or become loose, and the stays being hinged will not bend when weighed down between posts. This point is well illustrated in their familiar illustration "The Man on the Fence."

EVADING THE TRAVELERS' TAX.

An interesting discussion was evoked at the annual meeting of the Montreal Branch of the Canadian Manufacturers' Association when it was brought to the notice of the members that foreign travelers were evading the $300 tax that is supposed to be levied on them. Quite an ingenious method has been adopted by the travelers representing American and British houses, by which they are enabled to conform with all the requirements of the law. Several of them have pooled issues, and rented a small, cheap office, so as to be within the clause of the Act which calls for a resident agency. By following this method, an office can be rented for a hundred dollars or so per annum and when this amount is divided between several it is a mere bagatelle.

Mr. Dakers Cameron, secretary of the Montreal Branch, has drawn the attention of Hon. Mr. McCorkill to the evasion of the tax, and that gentleman has stated that the Act will be so amended as to cover all such contingencies.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Revolvers and Guns.

One of the most attractive catalogues of the season is that just received from the Harrington and Richardson Arms Co., Worcester, Mass. Thirty-one pages, 9 x 6 ins., give complete specifications of the many lines of revolvers and shot guns manufactured by this firm. There are many illustrations, giving views of the factories and their products. The cover is gotten up to represent an oak slab, and on the fzont is an embossed illustration of the H. & R. automatic double action revolver. The back cover is even more striking, representing as it does in embossed work a shoulder plate of the H. & R. shot gun. Readers desiring this catalogue will please refer to it as Catalogue No. 8, and mention Hardware and Metal in writing.

Pipe Machines.

The Williams Tool Co., Erie, Pa., have sent out 7 sheets, on the front of which is illustrated one of their pipe machines, and on the back of each the machine is described. The illustrations are good, and the descriptions include prices and also pointers regarding the care of the machines.

Facts.

The Maritime Nail Co., Limited, St. John, N.B., have issued a neat little booklet entitled "Facts, Like Mules, are Stubborn Things," in which the essential qualities of a good horse nail are pointed out, and it also shows how the "Peerless" has these necessary qualities. It is printed in two colors and is illustrated.

Case-Hardening.

"Case-Hardening. What to use. How to use it," is the title of a small booklet sent out by W. H. Palfreyman & Co., 17 Goree-Piazzas, Liverpool, in which there is a complete description of how to case-harden steel with hydrocarbonated bone black, which this firm claims is the best material for case-hardening where the toughest, finest and deepest case is desired. The process of annealing is also described.

Shot Guns, Ammunition.

A. M. Bell & Co., dealers in shelf hardware, fishing supplies, tinware and enamelware, Halifax, N.S., have issued

WIRE NAILS
TACKS
WIRE

Prompt Shipment

The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

their No. 11 catalogue, July, 1905. It describes and illustrates profusely their shot guns, rifles and ammunition—very seasonable goods. Among the shot guns illustrated are double and single breech-loading guns of several kinds, including Iver Johnston, and also Winchester repeating shot guns. Among the rifles described are Winchester repeating, "Mannlicher System" repeating rifles, Savage hammerless, sporting and Stevens rifles.

Prize List.

The prize list of the Fredericton Exhibition, to be held September 21 to 28, 1905, is ready for distribution. It is very neatly gotten up, an index of the principle features being printed on the cover for ready reference. It contains 90 pages, 6 x 9 ins.

Annual Report.

The forty-fourth report of the Cape Town Chamber of Commerce for 1904-'05, is to hand. It contains the president's address, statements of accounts, statistics relating to the trade of Cape Colony. It contains 170 pages, 8 x 5 inches.

Convention Number.

The convention number of monthly bulletin of the National Association of Credit Men, New York, is a very neatly gotten-up book. The entire bulletin is devoted to the proceedings of the national convention held at Memphis, Tenn., in June, 1905. It contains 113 pages, 9 x 6 inches.

Heating and Ventilation.

An elaborate 48 page and cover book of album style, entitled "Heating, Ventilating and Sanitation," has been issued by the Fuller & Warren Co., Troy, N. Y. The topics enumerated in the title are practically considered and applied for use in schoolhouses and other public buildings, numerous illustrations being given to show the buildings equipped by this company's system, and the plans illustrating the methods of installation. Heating contractors who send for a copy should mention Hardware and Metal in their letters.

Victoria Bolt and Nut Works.

Among the English firms who are waking up to the fact that the Canadian trade is a desirable one, is that of Richard Davies & Sons, Victoria Bolt & Nut Works, Manchester. They have issued a neat price list giving quotations on bolts, nuts, set screws, washers, etc. Another branch of their business is the manufacture of the "Perkins" bench for pattern makers, and wood workers. By means of this bench, it is claimed that the cost of production is cheapened, while maintaining a high standard of quality. McLean & Sophus, 301 St. James street, Montreal, are Canadian agents for this firm.

The Canada Damper.

McClary Mfg. Co., London, are sending out a neat blotter of envelope size. An illustration of the damper and the inscription, "This is a good damper. Try it once," sets off the blotter nicely.

Loew Steam Specialties.

A folding post card has been sent out by the Loew Supply & Mfg. Co., 39 Cortlandt street, New York. The card introduces Loew heaters, die stocks and other specialties and provides a return post card on which an interested party can send for a larger catlogue. Mention Hardware and Metal when writing.

A NEW STEEL PROCESS.

THE Standard Foundry Co., of Longueuil, Que., have been carrying on some interesting experiments of late to demonstrate the superiority of a new process of steel making, discovered and developed by them.

By the new process, it will be possible to cast steel as easily as iron or to give immediately to cast iron the properties of steel, which, it is claimed, will reduce the cost of steel production fully one half. Indeed the management state that as soon as the new process is commercially adopted it will hardly be necessary to use forged iron at all, as the new steel will be more economical.

An experiment recently made at the Hochelaga works of the Montreal Street Railway, demonstrates very clearly that the new process will not only hold its own with the older methods in quality, but, what is very surprising in view of its cheapness, will even exceed the durability of the latter. The trial was made with the steam hammer, and at the first blow the two pieces of the old-style steel were shattered, while the one made in Longueuil not only stood the test, but, after repeated blows, instead of breaking, simply flattened out.

This will be gratifying news to all steel-consuming manufacturers who are trying hard to reduce the cost of production. Further tests will be awaited with great interest, and with the hope that it may become a commercial success.

NEW ELECTRICAL WAREHOUSE.

During the last three years the R. E. T. Pringle Co., Limited, Montreal, have had an office and sample room in Toronto and have made shipments directly from their factory in Montreal, but owing to the increased demand for quick shipments to patrons in Western Ontario, they have put in a complete stock in the new Empire Building, 62-64 Wellington street west, Toronto, where they will carry a full line of electrical supplies, etc.

BUSINESS CHANGES

Ontario.

W. F. Cockshutt & Co., hardware merchants, Brantford, have sold to G. W. Serles.

A. M. Regan, of Regan & Nickels, wholesale hardwood lumber dealers, Toronto, is dead.

H. Killer, dealer in agricultural implements, Waterloo, has assigned to Dilman Liebler.

Quebec.

E. Chateauvert, carriagemaker, Lambton, has been burned out.

F. Dion, carriagemaker, Lambton, has been burned out.

J. R. Durand, tinsmith, Berthierville, has compromised.

A. Drolet & Cie. have been registered as plumbers, Montreal.

E. Dupuis, tinsmith, Cheneville, has been succeeded by Z. Latrendress.

Rainville & Lussier, contractors, Farnham, have dissolved partnership.

Calestagne & Fournier have been registered as painters and decorators, Montreal.

J. E. Gratton, plumber, Montreal, has assigned. A meeting of creditors will be held Sept. 1.

A meeting of the creditors of J. H. Lacroix, hardware merchant, Shawinigan Falls, was held Aug. 31.

Nova Scotia.

E. Archibald, harness dealer, Truro, has assigned.

Manitoba and N.W.T.

B. Van Blaricomb, hardware merchant, Arden, has sold out.

H. H. Avery, harness merchant, Darlingford, has sold out.

S. Tits, hardware dealer, Napinka, has sold to Hughes & Jones.

Currie & Harris, harness dealers, Newdale, have advertised their business for sale.

British Columbia.

S. McMahon, blacksmith, Revelstoke, has suffered loss by fire.

Iver Johnson Safety Automatic

Hammer, $5.00

Hammerless, $6.00

Extra length Barrels, 50c. per inch. Pearl Stocks, $1.25 extra.

No Fear of Accidental Discharge if it's an

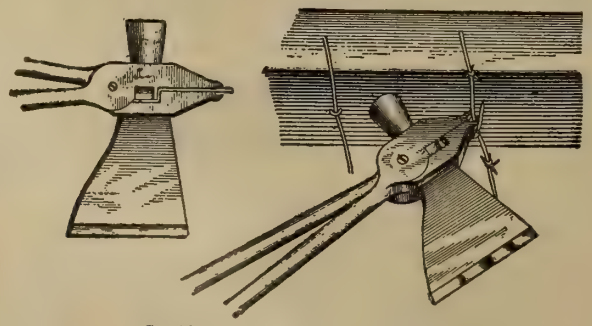
IVER JOHNSON

Safety Automatic Revolver

because the revolver hammer never touches the firing pin. This *safety principle*, found *only* in the Iver Johnson is due to the fact that the lever which transmits the blow from the hammer to the firing pin is never in position to do so except *when the trigger is pulled all the way back.* All hardware and sporting goods dealers sell Iver Johnson Revolvers and can verify these facts if they will.

Send for illustrated booklet "Shots," mailed free with descriptive catalogue.

Iver Johnson's Arms and Cycle Works, River Street, Fitchburg, Mass.



NEW YORK OFFICE: 99 Chambers Street

NEW CEMENT INDUSTRY.

The Lehigh Cement Co. have closed the purchase of about 1,000 acres of limestone and clay lands preparatory to the erection of what will be one of the largest single cement plants in the world. It will have a capacity of 4,000 barrels per day. The company hope to be turning out cement at their Canadian plant some time next Summer.

A NOVEL MILK PAIL.

A NEW milk pail is provided, in addition to the receptacle for milk, with a compartment for carrying a sponge and a chamber for water to be used in washing the cow's udder before milking so that the milk will be kept clean. According to the arrangement the pail is made reversible, being in one position adapted to carry water and in the reverse position to receive milk. A transverse wall separates the sponge and water compartments from the milk receptacle, and an inclined wall separates the water compartment from the sponge-holder. This inclined wall forms a contracted mouth for the sponge compartment, so that the sponge will be retained while the pail is carried in reverse position. A ring or band encircles the body of the pail and is prevented from slipping off by the crimped edges of the pail. To this band the bail is hinged. On the body of the pail two ribs are formed which prevent the band from dropping down to the lower end. However, two offsets are formed on the band so that when the pail is reversed they may be brought into register with the ribs and the band may be raised, bringing the bail in position for use. When raised to the top, the band is given a half turn to prevent it from slipping down again. A suitable cover closes the mouth of the milk receptacle and prevents entrance of dirt when the pail is set on the ground in an inverted position. It also serves as a protection when carrying the milk. Mr. Fred. W. Lechner, of Winona, Ill., (R.F.D. No.11! is the inventor of this novel milk pail.

Combination Tool for Fence Building.

TOOL FOR FENCE BUILDING.

THE combination tool illustrated herewith will be found of value in building and repairing wire fences. It comprises in one instrument a hammer, hatchet, pliers, wire cutters, wire benders, and staple pullers. The hammer head is attached to one, and the hatchet blade to the other of a pair of hinged plier jaws. Just below the pliers are the wire cutters, consisting of tapering blades, formed on the opposite jaws. When it is desired to bend a wire, preparatory to making a loop, it is seized between the plier jaws, in the manner indicated by our side view of the tool, when the lower end will be bent at right angles by the lug projecting above one of the cutter blades. Each jaw carries at its upper end a pair of claws, which will be found useful for removing staples, etc.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A CINCINNATI dispatch says the deal is being completed by which the Niles-Bement-Pond Co., builders of machine tools, at Hamilton, Ohio, will acquire control of the machine tool manufacturing business of the John Bertram & Sons Co., Limited, of Dundas. By this move the Niles Co. absorbs its principal competitor in Canada, and will be able to manufacture for Canadian consumption on Canadian soil. The present capital of the Bertram Co. consists of a paid stock issue of $300,000. All this will be purchased by the Niles-Bement-Pond Co. In addition, the Bertram Co. is to increase its capitalization by the addition of $100,000 of common stock and $200,000 of 6 per cent. cumulative preferred stock. The Niles Co. will purchase the additional $100,000 of common stock for $100,000 in cash or at par. The Niles-Bement-Pond Co. has an authorized capital of $8,000,000, of which there has been issued $5,000,000 of common, which is the full authorization of that class of stock, and $2,000,000 six per cent. cumulative preferred. It is a New Jersey corporation. The London Machine Tool Co. is not concerned in the amalgamation.

The Brantford Screw Co. proposes to double the size of their factory.

A representative of an American churn company has been looking for a factory site at Brantford.

C. A. Cyphers, incubator manufacturer, Buffalo, is considering the establishment of a branch factory at Berlin.

The Robb Engineering Co. are building two 200 horse-power Robb-Mumford boilers for the Cumberland Railway and Coal Co.

Work on the railroad tunnel which is to be constructed under the Detroit River between Windsor and Detroit has been begun.

The site for the factory of the Dominion Thread Mills in Stratford has been selected, and the building will be commenced very shortly.

The factory buildings of the Plymouth Cordage Co., Welland, will be located at the Michigan Central station, and the warehouses on the canal.

In order to establish a branch stove foundry at Vancouver the Record Stove Foundry of Moncton, N.B., proposes to increase its capitalization from $800,000 to $1,000,000.

The Ladysmith (B.C.) Iron & Stove Works are receiving many orders for stoves from the mainland, and a number of fresh hands have been put on to cope with the orders.

Hon. Mr. Emmerson has been authorized by the Government to purchase forty new locomotives for the Intercolonial Railway. The understanding is that they are to be purchased from Canadian firms.

The largest shipment of steel by the Dominion Iron & Steel Co. was made last Friday, when twenty-nine cars, amounting to about 1,500 tons, were shipped to Montreal and upper Canadian markets from Sydney.

The Canadian Westinghouse Co. of Montreal has been awarded the contract for the installation of a 1,500 k.w. steam turbine for the Ottawa Electric Co. The turbine will be the largest placed by the company in Canada.

The Dominion Iron & Steel Co. has an average daily output for the past three months from the open hearth furnaces of 450 tons of steel, of which about 350 tons have been used in the rail mill since it started. The rest went to the billet mill. One day last week the record output of 670 tons was made. It is said that the company may have a plate mill in operation next year.

The Western Canada Cement & Coal Co., London, England, has authorized applications for £2,250,000 of first mortgage bonds at par to be supplied in acquiring cement, clay and anthracite coal lands at Kananaskas, Alberta, in erecting a portland cement factory and for working capital. Besides this is contemplated the building of 300 to 500 elevators throughout the Northwest, equipped with the latest appliances and with a capital of from ten to twelve million dollars.

After all is said, the removal of the bounty on steel rails will not so seriously affect the producers as was at first supposed. As a matter of fact, the bounty, owing to the sliding scale adopted when the bounty was introduced, amounted this year to only $1.65 a ton, and not to $3, as was generally thought. It is not the same bounty that is paid on finished steel. So far, at least, as the Dominion Iron & Steel Co. is concerned, the removal of the bounty simply reduces the protection from $11.40 to $9.75 per ton.

The contract for the complete construction of the roadbed ready for ties and rails upon that section of the Grand Trunk Pacific Railway from Portage la Prairie to Touchwood Hills, N.W.T., 275 miles, was awarded last week at the office of Mr. Frank W. Morse, Montreal, to the McDonald, MacMillan Co., of Westbourne, Man. This does not include the construction of the steel bridges. The successful firm is a purely Canadian organization, well and favorably known in the Northwest. The contractors' figures for the work are variously estimated from between $3,000,000 and $3,500,000.

Companies Incorporated.

The Stuart Machinery Co., Limited, of Winnipeg, will apply for the right to increase their capital stock from $49,000 to $200,000.

The Kerlin Brother Co. of the State of Ohio have been granted the right to do business in Ontario to the extent of $30,000, with H. E. Rose of Toronto as its attorney.

Monarch Realty Corporation, Winnipeg; share capital $40,000; purpose, to carry on the business of a land company.

The directors are C. H. Brooman, R. A. Jones, P. Ulrich, C. Smith, and C. J. O'Toole.

The Detroit & Kent County Oil and Gas Co., of Ontario, Limited, have been granted the right to do business in Ontario to the extent of $40,000, with W. Jackson of Osborne P.O., Ont., as its attorney.

Port Arthur Iron Mines, Limited, of Toronto; share capital $500,000; purpose, to carry on the business of a mining, milling, reduction and development company. The directors are W. H. Moore, G. G. Ruel, and F. C. Annesley, all of Toronto.

The Buffalo Mining Co., Limited, of Fort Erie; share capital [illegible]; purpose, to carry on the business of a mining, milling, reduction and development company. The directors are C. L. Dennison, R. W. Pomeroy, and G. C. Miller, all of Buffalo, N.Y.

New Ontario Cobalt & Silver Mining Co., Limited, of Ottawa; share capital $1,000,000; purpose, to carry on the business of a mining, milling, reduction and development company. The directors are L. Bedell of Goshen, N.Y., and W. A. Allan and J. T. Lewis of Ottawa.

The Western Lighting Co., Limited, of Rosser; share capital $20,000; purpose, to carry on a business as manufacturers and dealers in all kinds of illuminating supplies, etc. The directors are E. E. Price and R. Price of Rosser, and W. P. Rogers, W. F. Farrow, and R. G. Afleck, all of Winnipeg.

The Dymond & Abitibi Mining & Development Co., Limited, New Liskeard; share capital $25,000; purpose, to carry on the business of a mining, milling, reduction and development company. The directors are J. Wilson, J. McCracken, J. Mason, C. A. Marwahn, J. Scott, W. J. Tindall, and W. J. Evans, all of New Liskeard.

The St. Lawrence Supply Co., Limited, of Montreal; share capital $20,000; purpose, to carry on a general business as machinists and engineers. The directors are W. A. McKay, J. G. Veith, A. R. Oughtred and M. A. Phelan, all of Montreal, and E. G. Place of Westmount.

The Cataract Electric Co., Limited, of Orangeville; share capital $50,000; purpose, to construct and maintain works for the production of electricity for purposes of light, heat and power. The directors are J. M. Deagle and E. M. Deagle of the township of Caledon, and F. Deagle of the township of Artemesia.

The Temiscaming Mining Co., Limited, of Haileybury; share capital $100,000; purpose, to carry on the business of a mining, milling, reduction and development company. The directors are C. A. Richardson of St. Catharines; J. L. Wheeler of Emporium, Pa.; R. A. Cartwright of Broekport, Pa.; B. E. Cartwright of Buffalo, N.Y.; and J. F. Gillies of Haileybury, Ont.

The Sucker Creek Gas & Oil Company of Anderton, Limited, of Amherstburg; share capital $50,000; purpose, to bore and drill for oil, petroleum and natural gas. The directors are J. G. Mullen, W. H. McEvoy, J. A. Auld and H. Clay, all of Amherstburg; H. G. Duff and W. H. Gatfield, of the township of Anderton; J. Anderson of Windsor, and E. Winters of Leamington.

No. 19. OSHAWA, ONT. SEPT. 2, 1905

FOR ALL MEN

Perfect Metal Lath is for all men who intend to build or to renovate, no matter when, no matter where. It is as essential to modern equipment as the telephone, electric light or any other of the great inventions which found their way into existence through the portals of Necessity. Fire has devasted so many buildings, decayed wood has made so many inroads on health, that to ignore the Remedy when contemplating construction is nothing short of homicide, much less business puerility.

FOR ALL TIME

Perfect Metal Lath stands as the all-conqueror of fire, the hitherto unconquerable disaster-monger, and it has ill-health (from buildings) driven to the wall. With its perfectly-cast mesh, non-corrosive metal, freedom from scales, it retains the plaster permanently, permits no cracking and never rusts. It can be applied quickly and with little labor. The price is **10c. per sq. yd.**—low enough for **any builder.** We would like you as an enterprising Hardwareman, alive to your opportunities, to correspond with us. If we cannot show **you** the way to profit on **Perfect Metal Lath,** we may be able to convince **you** that it pays to carry our **Steel Ceiling** and **Wall Covering, Metal Shingles, Tile, Siding, Cornices, Store Fronts, Ornamental Zinc and Copper Work, Eavetrough, Conductor Pipe** and all Accessories. The sending of a post card to-day may spell **Success** for you in the near future—Act Now.

BUILDING AND CONSTRUCTION

BUILDING NOTES.

D. A. Hopper is erecting two stores at Brandon.

A $5,000 hotel is to be built at Fielding, Sask.

A new Oddfellows' Hall will be erected at Vancouver.

A new town hall is to be built at Qu'Appelle, Sask.

Alfred Piper is to build an $1,800 residence at Brantford.

A large three-storey hotel is to be built at Portage la Prairie.

The Merchants Bank are to occupy a new building at Napinka, Man.

Geo. Benger will build a modern block on Arthur street, Port Arthur.

David Booth, of Brockville, will build the $70,000 armories at Guelph

The Hall-McNab Co. will build a $40,000 flour mill at Red Deer, Alberta.

The Bank of Montreal are erecting a $30,000 business block at Lethbridge.

Kelly & Mitchell are to erect a marble bank building at Winnipeg for the Bank of Toronto.

An addition to the Calgary, Alta., Post Office will be built by the Alberta Building Co.

L. B. Schalanser has the contract to erect a handsome brick residence at Regina to cost $8,000.

J. Tompkins has about completed the construction of the C.P.R. roundhouse at Westmount, Que.

Permits have been granted to William Morrison, Brantford, for two brick houses at a cost of $1,500 each.

Swan, Church & Co., Montreal, are executing the expanded metal work in the new Mount Royal Club, Montreal.

The Canadian Northern Railway plan to build a hotel, depot and general office building at Winnipeg to cost $2,500,000.

Contracts were let this week for the construction of buildings for the new sheet steel and tin plate mills at Morrisburg, Ont.

There are several new buildings yet to be started in Fort William this Fall, chief of which is the large addition to Avenue Hotel.

The Manitoba Brewing Co., Fort Rouge, will begin the erection of an ale and porter brewing house and bottling works very soon.

Crowe & Wilson are to erect a $10,000 rooming house, A. M. Forbes a $5,400 store, and J. Leckie & Co., a $4,500 factory at Vancouver.

It is expected that eleven miles of the Elbow and Moose Jaw branch of the C. P.R. will be completed by the time the crop is ready to move.

The Trees, Spriggs Co., Limited, manufacturers of harness and saddlery, have under way the construction of a new block on Ross avenue, Winnipeg.

The contract for the erection of the new C.P.R. station at Medicine Hat has been awarded to Jas. McDiarmid, Winnipeg, the price being about $2,000.

R. J. Geddes, Sixth avenue, Vancouver, B.C., is going to erect a $2,300 frame residence; J. H. Geatrix, Fifth avenue, is going to build a $2,000 residence.

Pilkington Bros., Limited, glass manufacturers, St. Helens, Lancaster, Eng., are at present building a fine warehouse in Winnipeg on the corner of Louise and Market streets.

Work is progressing rapidly with the construction of the concrete piers for the Battle River bridge, the contractor, Mr. Foley, of Ottawa, having nearly fifty men at work.

Extensive plans for the improvement of the system of lighthouses along the Atlantic seaboard of Canada are announced by J. F. Fraser, of the Marine Department at Ottawa.

Adams Bros., of Winnipeg and Toronto, have a gang of men tearing down the old buildings at Moosomin preparatory to the erection of a fine new block, 54 by 60 feet, two storeys.

A start will soon be made on three new buildings in Guelph. These are the new C.P.R. station, $40,000; the Homewood Sanitarium additions, $100,000; and the Armoury, $100,000.

The W. G. Grace Co., of Chicago, have secured the contract for all concrete work, foundations, etc., for Sir William Macdonald's Agricultural Farm building at Ste. Anne de Bellevue, Que.

The work on the new lighthouse at Burlington Beach, Hamilton, has been commenced. A concrete base will first be laid, and on that will be erected the steel structure of the lighthouse.

Plans and specifications for the first 80 miles of the Lake Superior branch of the transcontinental railway are now on exhibition in Montreal, and contractors will be allowed 30 days in which to submit tenders.

Building activity is showing no signs of slowing up in Winnipeg at the present time. The number of permits being issued daily still indicates that the present year is to be a record one for building operations in the city.

Messrs. F. F. Powell & Co., Montreal, have completed the contract which they have carried on for the past twelve months on the Royal Mills, grain elevators, conveyors, flumes, etc., for the Ogilvie Flour Mills Co.

Mr. S. L. E. Cuddy, St. Lawrence street, Montreal, has purchased, through Messrs. P. S. Ross & Sons, the property at 295 St. Lawrence street and along De Montigny street to and fronting St. Dominique street, for $28,000.

The Lehigh Portland Cement Co., Allentown, Pa., have purchased 10,000 acres of limestone and clay lands lying east of the Belleville Portland Cement plant. This company will erect next Spring a plant of 4,000 barrels per day capacity.

The W. G. Grace Co. have sub-let the expanded metal lathing and partition work required in Sir Wm. Macdonald's Agricultural College to the Clinton Fireproofing Co., of Montreal. This firm are using Pedlar's Perfect lathing on this work.

The Winton Automobile Co., Cleveland, have purchased property on Richmond and Victoria streets, Toronto, on which a large three-storey automobile repair shop and showrooms will be erected. Building will be commenced by September, it is said.

The Fairbanks-Morse Co., Chicago, have the contract for the construction of new coal sheds and the installation of the coal handling machinery for the Dominion Coal Co. in Prince Edward Island. The driving machinery consists of two 50 h.p. engines.

The National Construction Co., who, it is announced, will be the principal contractors of the Grand Trunk Pacific Railway from Winnipeg to the Pacific, is made up of interests connected with the Grand Trunk Pacific Railway and the Grand Trunk Railway.

The following are among the buildings being erected in Brampton: Residence for J. C. Laird; residence for Misses Trimble; residence for W. E. Milner; store on Queen street for Wm. Burton; curling rink; Copeland-Chatterson's buildings, of which the machine shop is completed.

The Western Canada Milling Co., Montreal, have let the contract to Jas. Stewart & Co., Pittsburg, for the erection of a flouring plant in Montreal to cost between $550,000 and $600,000. The buildings will be concrete-steel construction, and the plant will have a capacity of 5,000 barrels per day.

Messrs. Nagle & Mills, of Ingersoll, have secured the contract for the erection of the new factory for the Ingersoll Nut Co., at $9,250, which is $1,250 more than the cost of the building originally contemplated in the agreement in connection with the by-law granting a loan of $20,000 to the company.

New tenders are being called for by the Public Works Department for the Implement building for the Ontario Agricultural College at Guelph, and the cottages to be erected there. The appropriation for the building is $25,000, and for the cottages $3,000, and the former tenders so greatly exceeded these amounts the Minister decided to ask for others.

Building permits have been issued at Vancouver as follows: E. E. Williamson, Westminster avenue, $2,000; Capt. Ledwill, Pacific street, $1,800; J. Elliott, Hornby street, $2,000; C. O. P. Olts, Lansdowne street, $1,800; E. O. Lyte, Pender street, $3,000; Mrs. W. J Brenton, Ninth avenue, $6,000; C. C. Eli, Davie street, $1,800; H. Hadden, Hastings street, $16,000; A. C. Clemes, Hastings street, $20,000; A and W. Vachon, Granville street, $5,500; J. Kendall, Fifth avenue, $2,500.

S. Austin, roughcast dwelling, Dovercourt road, $1,800.

R. L. Davey, brick store and dwelling, Queen street, $6,000.

A. F. Saunders, brick dwelling, 350 Concord avenue, $2,000.

George S. Bell, roughcast dwelling, Emerson avenue, $1,800.

J. Simpson & Sons, brick factory, 8 Berkeley street, $30,000.

J. A. Matthewson, brick dwelling, 218 Deleware avenue, $3,000.

W. D. Michall, brick residence, Palmerston boulevard, $4,000.

F. W. Cox, brick store, corner Pape and Dagmar avenues, $2,200.

J. R. Fullerton, alterations to dwelling, Balmoral avenue, $3,000.

Geo. Edward Key, one pair roughcast dwellings, Garnet avenue, $3,000.

Jas. Simmons, four pair concrete dwellings, Yonge street, $18,000.

M. Murray, one pair roughcast dwellings, Palmerston avenue, $3,000.

Staunton Limited, factory, steel and concrete, 944 Yonge street, $50,000.

W. Stark and W. Black, one pair brick dwellings, Walmer road, $7,000.

Dominion Realty Co., brick and stone banking offices, Yonge street, $50,000.

J. S. Montgomery, one pair brick and stone dwellings, Bathurst street, $7,000.

W. E. Redway, brick residence, corner Broadview avenue and Smith street, $4,500.

J. A. Aberdeen, three pairs brick dwellings, 210 to 220 Braodview avenue, $12,000.

A. Cornwall, three pairs brick dwellings, corner Dupont and Albany avenue, $9,000.

Henry H. Hall, stone and brick residence, corner Bathurst and Barton avenue, $3,500.

Trustees College Street Methodist Church, brick Sunday school, corner College street and Sheridan avenue, $20,000.

CANADIAN VS. ENGLISH BRUSHES.

IN a recent issue of Hardware and Metal space was given to a letter written by Mr. E. P. Oxenden and published originally in the Ironmonger. The writer has been in Canada only a year and endeavored to give his former English friends his impressions of Canadian hardware stores and goods in comparison with ironmongery in Great Britain. Exception could well be taken to some of his criticisms, particularly to those dealing with the supposed poor quality of Canadian brushes and tinware, and we publish below a short letter from a correspondent dealing with the brush trade. Readers of Hardware and Metal are well aware that there is a vast difference between English and Canadian goods. British goods are in many cases made unnecessarily heavy, while the demand in this country is for lighter articles. The English writer being accustomed to the heavy goods is naturally unwilling to admit the merit of the product of factories catering to a different constituency to that which he has been accustomed to. The letter referred to is as follows:

Toronto, August 29, 1905.

Editor Hardware and Metal,—In your issue of last week you publish an article from the Ironmonger sent from a party in "Canada" stating that the household brushes made in Canada were not as good a variety as made in England. The party who wrote this was evidently not acquainted with brush manufacturing in Canada or the large assortment made in Toronto. We would invite this gentleman to visit the sample rooms of the Boeckh factories at 80 York street and see the large assortment of household brushes, where everything he will require for trade in Canada will be found to order. The trade and requirements are entirely different to Old Country trade, and we cater to a more up-to-date market. We are well aware of the fact that the lines used in England are not saleable in Canada; therefore, manufacturers should not be placed in such bad light, or as slow as this new arrival makes out we are. Trusting the writer of the article to the Ironmonger will have an opportunity of reading this, and thanking you for your valuable space.

BRUSH TRAVELER.

To the Trade

THE McCLARY MANUFACTURING CO. extend a cordial invitation to their friends and to the trade generally to visit their new warerooms, No. 177 King Street West, where they are showing many new goods, and their travelling staff will be on hand to welcome visitors.

REMEMBER THE ADDRESS:

No. 177 King Street West, South Side

Between York and Simcoe

IT'S PERFECT

Maximum Light Glass has proven itself efficient in the most trying cases—proven itself efficient in such cases ***all*** times. Daylight passing down a light shaft 105 feet high in a London Building, is gathered and diffused throughout a room 40 feet long by

MAXIMUM LIGHT GLASS

The same glass placed in as ceiling lights, in any building, gives a uniform white light in "every" corner—quite different to the "patch" light of other systems. ***Maximum Light Glass*** applied to lean-to skylight is effective in long rooms where it would almost seem impossible to have anything but darkness. And ***Maximum Light Glass*** is the ***only glass*** that when placed directly in the window sash can successfully produce daylight. No wonder it is used the world over, and is in steady demand! No wonder Hardwaremen everywhere are glad they wrote for samples! A sample awaits you. It, with our Booklet, is the stepping-stone to opportunity—success.

STOVES AND TINWARE

MAKING FURNACE BUSINESS.

THE man for whom I first worked was one of those sour fellows who thought anybody who traded with his competitors offered him an affront, and he used to growl about not getting all the business he ought to have. I was too young and inexperienced at the time to know it was mostly his own fault and due to lack of sound business enterprise. Like all healthy young fellows I had lots of friends and got along well with the old folks. Knowing I would be laid off if the shop wasn't busy I took to asking my friends if they had any work in our line. After I had been a year or two in the shop doing mostly furnace work with an excellent furnaceman I learned enough to like it, and made it a point to keep a list of people with the name and size of the furnace and range they had in their houses. I lost no opportunity to add to this list, and then I made it a point to find out what condition they were in. This not only brought in repair work, but I inquired if the stoves and heaters gave good satisfaction. I got the boss into one or two scrapes by these inquiries and he cut a caper about it, but being young I told him he ought to have done the work right in the first place. This brought out the statement that he couldn't afford to because he had taken the job low to keep the hands going and to keep it out of the other fellow's hands. What a lame excuse for putting in a small furnace and small pipes for a man who could afford to pay for it. I told him it was and he showed me his teeth, but I showed him some of the work that I had brought in that he would have never got and that more than evened things up.

I found many a job that was unsatisfactory and was continually stuck, but learned that my journeyman preceptor saw through every mystery and had a remedy. I was in hot water a good deal of the time, but kept inquiring all Summer how people's furnaces worked till we had orders for lots of alterations, which, through the good judgment of my old shopmate, gave fine results and brought others that I had nothing to do with. This work kept us all that Fall and Winter, when without it we would have lost a lot of time. The boss growled and I hustled because I wanted to make full wages every week. I learned that it is best to do good work every time. I learned that people don't object to a bill if they know what it is going to be when the work is done and when good results that show follow it. I learned that job done low just to advertise is a fool trick and sets a low price for all other work. I learned that good furnace work that results in heating a building is worth a good profit and should bring it. I learned that salesmanship is as valuable as handicraft even to a journeyman. I learned that many furnaces which are too small are in houses in the section where I worked and have since learned that the same trouble is everywhere. I learned from my preceptor that the work of almost every furnace can be greatly improved by a man who thoroughly knows his business. I learned that more furnaces suffer from too small a supply of cold air than from short firing. I learned that an air supply equal in area to the total area of the hot air pipes is better than a smaller supply. I learned that hot air pipes should have a square inch of area for every 25 or 30 cubic feet of space in the room heated. I learned that a better rule is to consider the glass and wall surface as well as the contents. I learned to allow 1 square inch of area for every square foot of glass, 1 for every 10 square feet of wall and 1 for every 100 cubic feet of space. I learned to add 20 per cent. for exposed north walls, 15 per cent. for west walls and 10 per cent. for east walls. I learned that 1 square inch of grate surface should be provided for every 1.5 square feet of equivalent glass surface, counting 4 square feet of wall as equivalent to 1 of glass. I learned that a furnace with a long fire travel is more economical and a better heater than a direct draft furnace having the same size grate. I learned that this systematic method of getting down to facts avoided mistakes, inspired confidence and brought in the orders. I learned to be thankful that my old preceptor had clippings on all these points and had proven them and was willing to teach me. I learned to feel sorry for the narrow-minded, unprogressive old curmudgeon who bossed us both. I learned that I could not work and hustle too after a year or two on this plan and made the boss send out cards saying what we could do and inclosing addressed postal cards to be used for orders. I learned something about advertising from this, and have had seasonable circulars ever since. I learned more things about other things and may tell about them another time.—W. I. N., in the Metal Worker.

NEW PAN OR POT LIFTER.

HOUSEWIVES always welcome any new device or apparatus which will lessen their labor and make their housework more easy. Perhaps this is why inventors are constantly striving to invent something that can be universally used. Numberless household inventions are patented yearly, and, although the majority are meritorious, they are generally too complicated or too costly to be of real value.

A Colorado man has invented an extremely simple lifter to be used for removing hot pans which have no handles from the fire. All the pans used in cooking are not provided with handles, and it is invariably the custom for the housewife to remove them with the aid of a towel or cloth, and unless she is quick about it she burns her fingers. Nobody should think for a moment of lifting the stove lid without a stove-lifter, and this device is much the same shape and design. It comprises a handle with a fixed jaw blade formed at one end, with an additional handle pivoted between a pair of lugs attached to the upper handle. A movable bar, with a jaw blade at the end, is mounted underneath the upper handle. The jaw blades are placed over the edge of the pan, and, by squeezing the handles together, the inner jaw blade is brought into contact with the pan, and with a firm grip the pan can be carried anywhere desired with no danger of burning the fingers. A spring connecting the ends of the handle serves to keep the jaw blades apart except when in use.

WESTERN HEATING CONTRACTS.

THE Hartney Hardware Co., of Hartney, Man., agents for the Pease-Waldon Co., of Winnipeg, are installing a Pease Economy combination heating and ventilating system in a large new residence now being built in their town.

The school board of Saskatoon have accepted the Pease-Waldon Co.'s specifications for the heating and ventilating of the Neutana school. Accordingly a Pease Economy school heater and ventilator will be installed by local agents.

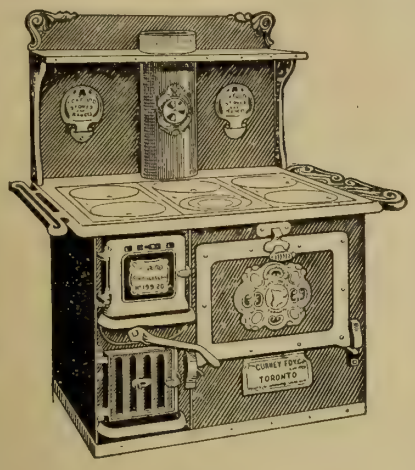
A ZINC ALLOY.

A zinc alloy which is easily worked, and stands rough usage better than white metals made with lead as a base, may be made by using 88 lb. of zinc, 10 lb. of copper, and 2 lb. of aluminum. By using 12 pounds of copper and no aluminum the alloy will be made harder. The process of melting is as follows: The copper is first melted and enough cold zinc is added to kill it and to prevent it spitting when added to the bulk of the zinc. The zinc is melted separately, and the copper poured into it, and the mixture is stirred. The aluminum is added after the copper and zinc have become perfectly fluid, and the mixture is thoroughly stirred. It is then cast into one inch plates, which are cooled, broken up and remelted under small charcoal. The alloy should be poured into horizontal sand-covered molds. The surface of this alloy resembles oxidized silver, and may be filed and polished. It cuts to a file similar to grey iron.

NEW STOVE COMPANY IN B. C.

It is definitely announced that the negotiations between A. E. Peters, president of the Record Stove Foundry, of Montreal, and the directors of the Albion Iron Works, Victoria, B.C., for the transfer of the stove foundry of the latter firm have fallen through. The proposal, however, has been taken up by a Victoria syndicate. The deal has not yet been concluded, but it is not expected that any difficulty will be met in reaching an understanding. The local company will be incorporated immediately, and when assuming control will expend a considerable sum in improving the plant and increasing the scope of the industry.

CONTRACTS SECURED.



The James Smart Mfg. Co., Limited, Brockville, report that they have secured the contracts to install Kelsey warm air generators to heat and ventilate the public school at Alliston, the St. Andrew's Presbyterian Church at Peterboro, and the St. Matthew's Presbyterian Church at Montreal. Three generators will be used in each case.

Steel Ranges are growing more popular every day and the most highly perfected one on the market is the **Oxford Chancellor Steel Range,** the sales of which are rapidly increasing.

Its unusual capacity, ready consumption of fuel, facilities for burning hard or soft coal, or wood, handsome appearance and efficiency are everywhere commended.

No range you have ever handled has given you such points for shop talk.

Our Guarantee Bond is Given with Each Range

THE

Oxford Chancellor Range

has a large oven with drop door, fitted with a patent spring; it makes a shelf upon which the heaviest roast is easily basted.

The Oxford Chancellor Range is constructed of steel plate, interlined with asbestos mill-board, which prevents the heat from radiating and keeps the kitchen cool.

The Draw-out Duplex Grate for hard coal burning is of material advantage, especially when repairs are necessary, as these can be made without disturbing the linings of the fire-box or water-front where one exists.

The Chancellor is beautifully ornamented with nickel finishings, and would sell on its appearance alone.

If you want to carry an article of the highest merit, we recommend the **Oxford Chancellor Steel Range.** We shall be glad to send you complete information on the subject, including prices, terms, etc., if you will write for same

EASTERN PEACE PROSPECTS.

AS we go to press, the welcome news that a basis of peace has been arrived at is confirmed.

We cannot withhold our hearty congratulations upon the receipt of such unexpectedly welcome news. The representatives of both Japanese and Russian Governments cannot be too highly commented upon the remarkably good feeling that has existed between them all through these most difficult negotiations. Russia has always been considered a mighty power and one to be reckoned with seriously. Japan, on the other hand, has suddenly blossomed forth from a position of almost seclusion into a prominent place among the nations; even after making due allowance for the extraordinary manner of Japan's military and naval successes, it can be easily conceived that the dignity of Russia, backed by a history of centuries, needed careful and diplomatic treatment of an unusual kind.

This is the feature which gave the American President an opportunity to distinguish himself as referee in perhaps the greatest war conference of modern times.

Public opinion has met with a decided check in the unexpected surrender by Japan of every point opposed by Russia. No one—not even Russia herself—was prepared for this. That some concession should be made was freely discussed, but not for a moment was anyone found bold enough to advocate such a complete withdrawal.

In the main, Japan is praised for her magniminity as the conquering power, whilst Russia is honored as having obtained the most remarkable diplomatic victory ever accorded a vanquished foe. Anyhow, the approach of the possibility of peace is a universal cause for rejoicing to the civilized world. Commerce can now go forward to the eastern world without fear; the introduction of better conditions which must inevitably follow the change of regime, and the establishment of a confidence hitherto unknown, are all factors which spell prosperity to the world of exporters amongst which Canada is one of the most important.

What, however, were the influences which induced such a complete revolution in the prospects of peace? Are there not factors to be considered not apparent on the surface, and may it not be that on penetrating the many diverse issues at stake some light will be obtained? It is not given to the general public, or even confidential envoys, to know all behind the scenes of the diplomatic world. A significant circumstance, however, and one perhaps not given its true importance, was the fact that as time went on and the conference accomplished little, it was Japan's Emperor himself who ruled events. Previously Japan had made her minimum terms known to Russia, and Russia, after the usual procrastinations, refused points she never expected Japan to concede. There is only one interpretation, viz.: that Russia's policy was for continued war. Why, will probably never be known to the world. It is noticeable, however, that a revised treaty with Great Britain had just been completed by Japan, and it is within reason to suppose that Japan's ally was the speaking factor in such a remarkable surrender. Britain's interests in the East are great; India has been seriously disaffected by Japan's successes. Russia has infinitely more to gain in India than in Manchuria. A disaffected India means Russia's opportunity. The secret of controlling India is their profound respect for the white race; further success of Japan would be the death knell to this. That Japan's successes should not reach the bounds of excessiveness is of universal importance.

What Japan has surrendered can easily be defined as generally of a financial character, with the staunch friendship of the greatest financial power for her ally. What, indeed, is the surrender of an enormous indemnity, the collection of which would, to say the least, be uncertain! The question of Russia's Eastern supremacy is fully covered by the uniting in navel confederacy of two such powers as Britain and Japan.

All points considered, it looks that Japan has risked the world's opinion for British friendship, and what seems like a surrender is in reality a great diplomatic checkmate to Russian ambition.

VALUE OF TRADE NEWSPAPERS.

THE merchant or manufacturer, the industrial or professional, the manager or operator, who assumes to "get on" without the trade newspapers, directly or collaterally bearing on his particular specialty, is seriously handicapped in the stress of competitive strife, says the Boston Herald. Wilfully, though perhaps not wittingly, he deprives himself of sources of information and material for progress and profit, lack of which must inevitably leave him in the lurch. The managing head of every "house," no matter how large the concern, should above all things see to it that each department head, and so many of the working force as by their intelligent interest show that they would profit by technical and professional information—that all these men are provided with the trade papers best fitted to promote the advancement of each in efficiency. This at the expense of the firm, of course, since the firm, in turn, cannot fail largely to profit by such policy. And don't commit the folly of balking at the preponderance of advertising pages. The information that these contain is never less, and often far more, valuable than that found in the "reading

MILLIONS FOR MATERIAL.

WHERE all the material to be used in the construction of the Grand Trunk Pacific is coming from is not yet known, but it has already been estimated what will be required to supply some of the necessary articles for the four thousand five hundred miles of track which the completion of the road will add to Canada's present twenty thousand railroad mileage. It has been figured that it will require 10,500,000 ties, nearly 500,000 tons of rails, 42,000,000 spikes, 5,000,000 bolts, 2,500,000 angle bars and fish plates, guards and tie plates also in the millions. It is estimated 500 locomotives, 30,000 freight cars, and 500 passenger cars will be required. Other items are bridge timber and steel, stations, telephones and telegraphs, water tanks, terminal facilities, fencing, etc., entailing an outlay of millions of dollars. These items are sufficient to warrant the commencement of many new industries at present not in active operation.

WESTERN HARDWARE ASSOCIATION PROGRESS.

SINCE the annual meeting of the Western Retail Hardware Association held in Winnipeg during the Exhibition week, Secretary McRobie has been hard at work in the Estevan section securing new members. He returned to Winnipeg last Saturday for a short stay in the city and called at the office of Hardware and Metal on Monday. He was able to report very gratifying progress, having met with only one refusal since the annual meeting. The following new members have been added to the association roll: I. P. Cheney, M. A. Boyd, Lyleton, Man.; Jas. F. Dandy, Pierson, Man.; F. G. Elliott, W. R. Burke, Gainsboro, Sask.; S. Shannon, Code & Hughes, Carievale, Sask.; E. Crosley, Oxbow, Sask.; McKean Bros., Riddell & Co., Frobisher, Sask.; Estevan Harness and Hardware Co., F. J. Musgrove, Stockwell & Perry, Estevan, Sask.; Macoun Lumber & Hardware Co., Macoun, Sask.; Weyburn Hardware Co., Thompson & Axworthy, Weyburn, Sask.; A. S. Baker, S. Taylor, Yellow Grass, Sask.

* * *

The addition of the names of these solid, substantial hardware retailers to the association membership means an encouraging increase in the strength and influence of the organization. The work is being done thoroughly in every town and district and hence it is necessarily slow. Organization in the Province of Manitoba has not yet been entirely completed, but as the association belongs to the entire west, not merely to Manitoba, Secretary McRobie has decided to devote the coming months to work in the new Provinces of Saskatchewan and Alberta. As is shown by the list above, work in Saskatchewan has already commenced and the early results are gratifying. During the next two or three months Mr. McRobie will visit Arcola, Regina and all towns in that section of the country. He will also visit Prince Albert and Saskatoon and undertake the organization of the trade in those sections. Edmonton, Calgary and other Alberta towns will also be visited in due time. In all parts of the west hardwaremen are anxiously awaiting the arrival of the secretary, but the impatient ones should remember that if the work is to be done thoroughly it can not be hastened. It is essential that in every place organized all the hardwaremen in the town should be included, for one merchant outside the organization can nullify much of the best efforts made.

* * *

Months must elapse before all the trade can be visited, but there is no reason why hardwaremen should wait for the secretary's visit before making an effort to better the conditions in their own towns. The units of the western association, the molecules of which the whole is composed, are the local organizations in the different towns. Let the hardwaremen in the different towns as yet unvisited by the secretary hold private meetings and organize their own local associations. Those associations should be conducted along the same lines as the Winnipeg Association, from which the larger western body has sprung. They should arrange that all their members get a fair agreed price for certain staples, such as wire, nails, and building paper, now sold in most towns at cost or at a loss. And they should arrange to put into effect on November 1 the association remedy for the long credit evil.

* * *

As readers of Hardware and Metal are aware, the association endorsed at the annual meeting a proposal to close all accounts on November 1, and insist upon cash payments until May 1. Thirty days' accounts are to be considered as cash. This plan has the merit of being an absolutely fair proposal for a country in which it is generally recognized that strictly cash business cannot be conducted. It is absolutely fair because it divides the credit burden with the farmer, allows him assistance while he is waiting for his crop to be harvested, and insists upon the payment of accounts and a strictly cash business only during the months when the farmer should have the money obtained from the sale of his wheat.

* * *

In every respect, but one, this is the same plan as that endorsed by the Retail Merchants' Association of Western Canada, a strong association composed principally of grocers and general merchants. The only difference is that the Retail Merchants' Association have shortened their cash period by one month. In many towns the merchants belonging to that association are issuing joint circulars to their customers announcing their new policy. Why should not the hardwaremen in each western town do the same, or—better still—why should they not join with the members of the other association in issuing joint circulars? The aims and objects of the two associations are almost identical, and they should work together in harmony. Certain it is they have a common enemy to fight in the long credit system and they should show that enemy a united front. But there is no reason why merchants should wait for the arrival of the secretaries of their respective associations. They should form their local associations at once.

MUTUAL FIRE INSURANCE.

AT the recent convention of the Western Retail Hardware Dealers at Winnipeg, the matter of establishing a Retail Hardware Dealers' Mutual Fire Insurance Co. in Canada was referred to a committee to investigate and report at the next meeting of the Association. As the question is an important one to hardware dealers in all parts of Canada, the tables given below noting the progress being made in Iowa and Minnesota will be found instructive.

The board of directors of the Iowa Hardware Dealers' Mutual Insurance Association at their semi-annual session at Mason City, Iowa, on July 12 and 13, last issued the following statement of business done up to July 1:

Total insurance written to date		$1,004,459.00
Insurance in force		677,309.00
Insurance written since Jan. 1, 1905		448,675.00
Cash rebates paid to date		1,344.11
Savings to policy holders on insurance written to date		4,060.00
Cash on hand Jan. 1, 1905	$3,290.10	
Premiums collected Jan. 1 to July 10, 1905	6,433.71	9,723.81
Orders paid since Jan. 1	3,345.43	
Cash on hand	6,378.38	
Premiums due	1,337.79	
Cash assets		7,716.17
Cost reinsurance now in in force		2,202.90
Total cost reinsurance to date		3,299.92

The statement of the Board of Directors of the Retail Hardware Dealers' Mutual Fire Insurance Co., of Minnesota, at the close of business, June 30th, 1905, shows the company in a most flourishing condition. The return premium for 1905 is 35 per cent., this return premium having been declared upon all policies expiring during the year 1905. The increase of business during 1904 was 40 per cent. The figures as submitted are in part as follows:

Income in 1905.

Cash on hand Jan 1	$46,424.75
Receipts for premiums	21,904.80
Receipts from interest	1,176.95
	$69,506.50

Losses	$10,425.63
Rebates and cancellations	636.63
Expense	4,421.00
Cash on hand	50,023.22
	$69,506.50

PIG IRON STATISTICS.

THE American Iron and Steel Association has issued the statistics of the production of pig iron in Canada in the first six months of 1905. The figures show a large increase as compared with either of the two halves of 1904, as will be seen by the following table, which gives the production by fuels, in gross tons, in half-yearly periods :

Fuel used—Gross tons—	To July 1, 1904.	To Jan. 1, 1905.	To July 1, 1905.
Coke	111,840	139,831	188,541
Charcoal	8,803	10,468	21,665
Total	120,643	150,299	210,206

The production of pig iron in the first half of 1905 was the greatest in any half year in the history of the Dominion, exceeding by 48,453 tons that of the last half of 1902, the next highest half year, when 161,753 tons were made. It was also greater than the production of any whole year prior to 1901. Down to that year the production of pig iron in Canada never amounted to 100,000 tons in any calendar year.

The production of Bessemer pig iron in the first half of 1905 amounted to 63,785 tons. There was no production of Bessemer pig iron in the first half of 1904, and only 26,016 tons were made in the second half of that year. The production of basic pig iron in the first half of 1905 amounted to 68,378 tons, against 28,981 tons in the first half of 1904 and 41,152 tons in the second half.

The unsold pig iron held by manufacturers on June 30, 1905, none of which was intended for their own consumption, amounted to 35,629 gross tons, as compared with 35,119 tons on December 31, 1904, and 36,868 tons on June 30, 1904. Of the unsold stocks on June 30, 1905, a little less than 6,500 tons were made with charcoal, the remainder being coke iron.

On June 30, 1905, Canada had sixteen completed blast furnaces, of which eleven were in blast and five were idle. Of this total eleven were equipped to use coke and five to use charcoal. In addition three coke furnaces were partly erected on June 30, 1905. Work upon all these furnaces had, however, been suspended for some time.

During the first half of 1905 the total number of furnaces actually in blast for the whole or part of the period was thirteen, of which eight used coke and five used charcoal. The number of furnaces that were idle during the whole period was three, all coke furnaces.

The Dominion Iron and Steel Co., Limited, of Sydney, N.S., had two of its four coke furnaces in blast on June 30. One of the idle furnaces is to resume about October 1.

The Nova Scotia Steel and Coal Co., Limited, of New Glasgow, N.S., operated its new furnace at Sydney Mines, Cape Breton, for 180 days during the first half of 1905, and abandoned its Ferrona furnace at Ferrona.

Messrs. John McDougall & Co., of Montreal, had one of their two charcoal furnaces at Drummondville in operation on June 30. During the first half of the year both furnaces were running, one for twelve and the other for forty-nine days. The idle furnace may resume next Winter.

The Algoma Steel Co., Limited, of Sault Ste. Marie, blew in its No. 1 furnace (charcoal) for the first time on March 1, 1905, and it was running on June 30. Its No. 2 furnace (coke) was in operation during the whole of the first half of 1905. The construction of furnaces Nos. 3 and 4 (coke) was not resumed in 1905.

The Deseronto Iron Co., Limited, of Deseronto, Ontario, operated its furnace on charcoal for 181 days during the first half of 1905, and it was running on June 30.

The Hamilton Steel and Iron Co., Limited, of Hamilton, Ontario, was operating its furnace on June 30. It ran for 150 days in the first half of 1905 on basic and foundry pig iron.

The Canada Iron Furnace Co., Limited, of Montreal, had its Radnor and Midland furnaces in operation on June 30. Radnor (charcoal) ran for 113 days and Midland (coke) for 167 days during the first half of the year. Bessemer pig iron was chiefly made at Midland.

The Northern Iron and Steel Co., Limited, of Collingwood, Ontario, did no work whatever in the first half of 1905 on the furnace for which excavations were made in 1902, but upon which work was suspended in 1903.

The Atikokan Iron Co., Limited, of Port Arthur, Ontario, broke ground early in August for its new blast furnace at Port Arthur. It will be 75 by 15 feet, will be equipped with three Roberts stoves, will use magnetic iron ore from the Atikokan range, which is located about 130 miles west of Port Arthur, and will have an annual capacity of about 30,000 tons of foundry and Bessemer pig iron. Coke will be made in ovens near the furnace. The officers are D. D. Mann, president; J. C. Hunter, vice-president; Hugh Sutherland, secretary and treasurer, and Robert R. Jones, general manager.

REACH OUT THIS FALL.

IT is always time to become an expansionist, but this coming Fall is going to be a good time to reach out. There is a great opportunity to do a big business on a profitable basis. To be sure, there are limitations in many sections both in the west and in the east, but there is always the chance to keep well-pleased customers buying more and more. Keep pegging away even if harvest conditions and prices of products are not just what you would like. Now is the time to gird your loins and to decide upon improvements in your store and store service. The Summer lull should be well utilized.

OUR MEXICAN TRADE.

ANOTHER avenue for Canadian trade has been opened up by the establishment of a direct steamship service to Mexico. This is another evidence of national growth, and it will be considered a matter for congratulation by all the commercial interests of the country.

One of the most hopeful features of the new market for Canadian products is the fact that the Government has for some time been maintaining in Mexico an agent whose faithful reports to the authorities will form an excellent guide for those who wish to avail themselves of this opportunity to increase their business. Experience in foreign trade has taught our business men that it is absolutely necessary to thoroughly understand the needs of a new field before exporting to it. The present opportunity, therefore, promises particularly well, because there will be none of that groping in the dark which characterized some of our earlier ventures—notably in the West Indies.

Canadian manufacturers must not, however, imagine that they are going to have a free hand in the Mexican trade. Far from it. Already good business has been established there by Germany, France, Great Britain, and the ubiquitous Uncle Sam. An effort must be made to cater to the peculiar needs of the people, and in some cases this may entail the making of special lines for Mexico. But there is every assurance that such efforts will be crowned with success, as the Mexicans are said to be awakening to the fact that they are living in the twentieth century, and that twentieth century methods must be adopted in order to ward off poverty and ruin as a nation. We now have an excellent chance to carefully study the demands of a new and important clientele, and we cannot better justify our claim of being a commercial nation than by successfully meeting those demands.

STEEL AND IRON PRICES.

The present prices of the following items of iron and steel compare with one year ago as follows:

	Now.	Year Ago.
Foundry pig No. 2s. Cin. ton	$14.50	$17.00
Bessemer pig, Pitts., ton	15.35	12.70
Grey forge, Pitts., ton	14.00	11.85
Steel billets, Pitts., ton	24.00	21.00
Wire rods, Pitts., ton	32.00	28.00
Steel rails, tons	28.00	28.00

PERFECT IDEA!

Absolutely the Most Up-to-Date and Perfect-Working Range on the Canadian Market.

Greater and Grander Than Ever

Dealers who have inspected our ***Range*** at ***Toronto Exhibition*** are unanimous that we have the best ***Range*** on the ***market.***

FEATURES

Loose Nickel Bands, Medallion and Shelves may be removed instantly for cleaning or when blacking Range.

Direct Draft Damper is operated from the front; the Damper Rod is not exposed to fire, and cannot burn out or warp.

The Main Bottom is corrugated and cemented, preventing unnecessary loss of heat through the bottom of Range and insuring quick baking by the reflection of heat against oven bottom.

Sliding Check Damper gives perfect control of draft.

Double Draft Duplex Grates.

Extension Fire Box.

Cemented Oven Top. Large Ash Pan.

Reliable Oven Thermometer.

Can be fitted with special Gas Attachment, so that back two lids serve as gas burners.

Grate Bars may be removed without disturbing linings.

NO.	HOLES	OVEN	WEIGHT
6284	6 8-inch	19x19x11	400
4294	4 9-inch	19x19x11	400
6384	6 8-inch	21x21x11	500
6394	6 9-inch	21x21x11	500

Guelph Foundry Co., Limited, - Guelph, Ont.

Branches: Toronto, Montreal, Winnipeg, and Calgary.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 58.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 1, 1905.

ORDERS in all lines are now coming in nicely, and the fall business may be said to have fairly opened up. Wholesalers expect a very big trade this Fall, and if their hopes are realized, the year 1905 will go down in hardware annals as a record breaker. The manner in which business was maintained throughout the Summer months was simply wonderful, and exceeded the fondest expectations of the most sanguine optimist.

Although general hardware is selling very freely, it is not able to keep up to the demand for sporting goods, which goes on without any signs of letting up. Arms and ammunition are, naturally enough, the features of the trade in sporting goods.

Some typical Fall lines are now being inquired for by dealers in all parts of the Province. Among these may be mentioned padlocks and rat-traps, which are in active demand.

The purely city trade has brightened up considerably, since the return of the Summer resort contingent, and the virtual settlement of the building strikes. Shelf hardware is in particularly good demand.

Country trade has been stimulated by the abundant harvest which is enabling farmers to spend money more freely.

American travelers report that prices are stiffening across the line and this strength may soon be reflected in the Canadian market, though no change has yet been made by any of the local jobbers.

Axes—There was a slight cut in axes lately, but the tone of the market has strengthened, and the old price is again quoted by all wholesale houses. Our prices are: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Follow the same general tendency as axes, and the prices given below may be taken as ruling the entire trade. We quote: Axe handles, No. 3, $1.25: No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a doz.

Sewing Machines — The approach of Fall is adding strength to this line, and orders are increasing with the advance of the season. Prices current are: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—As the long evenings are coming on the demand for lanterns is picking up well, and many orders have been shipped during the week just passed. We quote: Cold blast, $4.50; No. 0, Safety, $3.50.

Barb Wire—Only isolated orders are being received for barb wire which indicates that the season is now over. Our prices are: $2.75 for 100 lbs f.o.b. Montreal; $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—Like barb wire this line is an extremely slow seller at this season. Prices are the same as at our last report, as follows: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages, 25c. extra.

Rivets and Burrs—The good sale found for other lines of general hardware is largely shared by rivets and burrs. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—As usual, these are among the best sellers in the trade. Our prices are: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Are included in nearly every order that comes in. Prices remain unchanged as follows: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Wire Nails—Conditions reported last week are still existing, though there is less disposition to cut the price. We quote: $2.10 to $2.20 per keg f.o.b. Montreal

Cut Nails—Little activity is apparent in this line. Large orders are few and far between. We still give the following prices: $2.20 per keg, f.o.b. Montreal.

Horseshoes—A big business is now beign done in this line, as country dealers are stocking up for the Fall. Our prices are: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and large, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Still remain the feature of the market, which is especially strong in arms and ammunition. Shot guns and rifles are being shipped out as quickly as possible. We quote: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs.. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Manufacturers who have a large local trade, report an improvement in business since the petering out of the building strikes. The market, however, is rather unstisfactory, and everyone is looking forward to the Fall, to strengthen the market. Prices are as at our last report.

Cordage—Is now moving freely and the quietness which has characterized the market for some time past, has not been felt during this week. There has been no change in prices.

Cement and Firebrick—The week has been without feature, no big sales being noted. Local supply houses are looking forward to taking a share of the business which will result from the G.T.P. contracts being commenced. We quote: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35.

Coil Chain—Though there has been no change in price as yet, the market is firmer this week, and a stiffening in price is predicted. We give prices: 5-16 inch, $4; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—This is a very seasonable line, and good orders are being received from the great apple-producing districts. Our prices are: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—From all appearances, the business in skates will be heavy this winter. Jobbers report large orders already on hand. We quote: 25c. to $2.50, according to quality.

Sleigh Bells—The movement in this line has begun and good shipments are sent forward daily by the wholesale dealers. Our quotations are as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—This is another article which is selling more and more freely

as the Fall approaches. We still give the following prices: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Sept. 1, 1905.

LOADED shells and other ammunition are the goods which are moving in greatest quantity at present, all sporting goods being selling well. Shot guns and rifles are in strong demand.

Builders' hardware is also being shipped in large quantities, building being well advanced and finishings are being required by those engaged in construction work.

General business is fair and the holiday season being over an improvement is looked for. Fall trade is expected to be very active, the good crops having put most dealers in an optimistic mood.

There are no changes in prices this week.

Sporting Goods—Shot guns and ammunition are now moving quite briskly.

Washing Machines—An increasing demand is reported.

Chain—Trade is reported to be normal. We quote as follows: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Dealers are well satisfied with their sales. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Good business is reported at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demand for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire— Demand is active and stocks are being called on heavily.

Wire Nails—Good business is reported owing to the extensive building operations.

Cut Nails—There is a very satisfactory trade being done. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—A seasonable trade is reported. Our quotations now are as follows: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller. $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller. $4.20; featherweight, all sizes, 0 to 4, $5.50: toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—Trade is active at unchanged prices.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—Trade is fairly good. Some agricultural implements have withdrawn from the market, however.

Cordage—Sorting orders are coming in. but trade is expected to fall off. Our quotations continue as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—There is no change in the market this week. Business is very good. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Demand is strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 20c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—A good business has been done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool—The uncertain condition of this market still continues. Prices are altogether too high to warrant continuance. Inspected hides are ½c. firmer than last week. The Chicago market is also ruling high and equally as unsatisfactory. A report to hand from there mentions buffs as being in demand, but dealers had none to offer, and says that no doubt a good lot of western bundles would have brought good figures. Tallow is in very general demand and prices firm. We quote:

Hides, inspected, No. 1 per lb.		0 10½
" " " 2 "		0 09½
Country hides. flat, per lb.	0 09	0 10½
Calf skins, No. 1, selected		0 12
" " No. 2		0 10
Lamb skins and pelts		0 65
Rendered tallow, per lb.	0 04	0 04½
Unwashed wool, new clip, per lb.		0 16
Wool-washed fleece	0 25	0 26
Rejections		0 20
Pulled wools, super, per lb.	0 21	0 23
" " extra "	0 22	0 24

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 1, 1905.

A GENERAL upward tendency is noted in the whole metal market. Prices are advancing all along the line, but copper is still the feature. Quotations on this metal are now so high as to be almost prohibitive, and it is very scarce at that.

Tin, also, is advancing strongly, almost every day showing a higher price than the previous one. This is accounted for by a remarkably heavy demand, and the inability to produce the normal quantity. Brokers inform us that tin plates will inevitably advance in the very near future.

Pig lead, during the past week, has shown a daily advance on the local market. but it is predicted in some quarters that the conclusion of peace between Japan and Russia will tend to easier figures.

Antimony has experienced another jump, and its scarcity is a really serious feature of the situation. Even those jobbers who were carefully husbanding their supply are almost on their last pound, and they must soon come into the market for further supplies. Dealers report that even at the exorbitant figures asked orders are being shipped freely, though none of them are large. Buyers are content to get along from hand to mouth, in anticipation of easier conditions in the future.

Canada Plates—No change has occurred in the prices quoted last week. Quotations are: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper— This is the feature of the market. Even at the prohibitive prices quoted below, it is almost impossible to secure it at all, especially in large quantities. A famine is expected in the Montreal copper market. We quote: Ingot copper, 16 3-4; sheet copper, 24 1-2.

Ingot Tin—Additional strength is being gained daily, and prices now are: 36 1-2c. to 37c. per lb.

Pig Lead—Further advances are reported in pig lead and, at time of writing, quotations are from $3.80 to $3.90 per 100 lbs.

Boiler Tubes—The good demand experienced all Summer still continues. We give prices: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—Owing to an increase in freight rates, and the uncertainty of being able to ship orders, some dealers have found it necessary to advance prices, which now stand as follows:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.50	"	"
" (special)	18.50	"	"
Ayresome No. 1	18.50	"	"
" No. 3	17.75	"	"
Summerlee	18.25 to 18.75	delivered	Montreal.
Clarence No. 1	17.75	"	"
" No. 3	17.25	"	"
No. 1, Cleveland	17.50	"	"

Tool Steel—Prices remain unchanged. We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—Trade has been somewhat quiet during the past week. Prices still remain as follows: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2; reeled machinery steel, $2.75; mild,

$2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—A fair trade has been done, and the following quotations are given: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—The market is strengthening, and brokers confidently predict an advance. Current prices are: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15;; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c. extra.

Black Sheets—There has been no change to report, though the following prices are even firmer than before: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—The price has been again advanced. We now quote: 16c.

Sheet Zinc—This is another line which has advanced during the week. The scarcity is most pronounced, which accounts for the stiffening of the price. We quote: Cask lots, $7.25; small lots, $7.50.

Tin Plates—Though local manufacturers' agents and brokers confidently predict an advance, none has yet occurred. We quote: Cokes, $3.75; charcoal, $4.

Ingot Zinc—The tendency of the market is decidedly upward. An advance has occurred during the week. Quotations now are: 6 1-2c. to 6 3-4c.

Scrap Metal—Iron is more active than last week and prospects are that the price will advance in the near future, in sympathy with the strength of the pig iron market. Fall business is opening up in both wrought and cast iron scrap. The increase in ingot copper has resulted in a corresponding increase in scrap. Prices now are: Copper and wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 5-8c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; No. 1 country scrap, 75c. to 90c. per 100 lbs.; old rubbers, 5 1-2c. to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, September 1, 1905.

COPPER has continued to soar upward and quotations are half a cent higher than last week. Prices have gone above 17c. in New York, and 17 1-2c. is the ruling figure on the local market.

Recent advances on other metals have been held firmly as the general impression is that despite the decrease in demand for certain metals owing to the stoppage of the war the increased industrial activity will more than make up for the falling off.

Antimony appears to have reached top figures and no further increase is reported.

In old materials copper and brass show advances of 1c., a scarcity of supplies being reported.

Pig Iron—Many of the mills are booked ahead with orders and stocks are light. Quotations continue unchanged, as follows:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—There is a very active market. The mills are running to their full capacity. We quote: $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—The recent advance holds firm. Ingot tin is very scarce, and at the same time buying is active. We quote: 37c. to 38c. per lb.

Tin Plates—The demand has picked up and is now quite active.

Galvanized Sheets—An excellent demand is reported. Prices are steady.

Brass—Conditions are unchanged, business being fairly active. Discounts continue at 10 per cent.

Lead—The market is strong, with stocks light and demand very active. Prices are very firm. We quote: Pig lead, $4.00 per 100 lb., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—There is an active demand. Prices are steady: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—As predicted another advance has taken place on ingot copper, owing to a scarcity of stocks. Our quotations are as follows: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—In spite of the excessive prices ruling, there is an active demand for antimony.

Old Material—Copper and brass are quoted 1c. higher, being affected materially by the advance on ingot copper. Stocks are light and supplies scarce. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb., light copper, 12c. per lb.; heavy red brass, 11 1-2c. per lb.; heavy yellow brass, 9 1-2c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Anthracite prices have advanced 10c. We quote as follows: Anthracite in cars at bridges: Grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, August 31, 1905.

Apparently the United States Steel Corporation will pursue a cautious policy in its purchases of pig iron. The company has just bought 25,000 tons of Bessemer pig for delivery during the first half of September, paying for some of the iron on the basis of $14.50 per ton and for some of it up to $15 per ton. It is understood that the corporation has now in blast 92½ per cent. of its total furnace capacity.

Some basic pig purchases have been made in the eastern territory, sales aggregating about 10,000 tons have been effected in the Cleveland district, and some buying has taken place in the Pittsburgh district. So far as known the 10,000-ton lot of Bessemer pig for a plant in the Philadelphia district has not been placed. There have been further sales of low phosphorus iron.

There has been a fair run of orders for foundry iron, and the first indications of some interest on the part of buyers for the first quarter of 1906 are appearing.

The scarcity of steel is becoming more acute, particularly in the Chicago district. The announcement that the steel corporation will build seven additional 50-ton open hearth furnaces and an additional blast furnace at South Chicago is interesting in this connection.

Further heavy sales of steel rails have been effected, the aggregate being about 200,000 tons. Among them are one lot of 50,000 tons for the Santa Fe, and 25,000 tons for the Missouri Pacific, for 1906 delivery, and 10,000 tons additional for the St. Paul, for delivery this year. Orders for 200,000 tons more are pending.

An interesting transaction is the sale of 10,000 tons to the Grand Trunk road made by an American mill for delivery this year, the Canadian mill which had the order not being able to live up to its deliveries.

The increasing frequency with which premiums on structural material have been paid will in all probability lead the makers of beams and angles to advance their price in the near future. If this should be done it will be the first advance which has been made for some time.

Good reports continue to come from the wire trade as to the tonnage being placed. The leading interest has booked about 140,000 tons thus far this month.

There is a fair buying movement in sheets and in tubes, but tin plate is still lagging.

LONDON METAL MARKETS.

From Metal Market Report, Aug. 30, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 48s. 3d., and Scotch warrants at 50s. 6d., making prices, as compared with last week, 10 1-2d. higher for Middleboro, and unchanged for Scotch warrants.

Tin—Spot tin opened weak at £151 2s. 6d., futures at £150 12s. 6d. and after sales of 70 tons of spot and 730 tons of futures, closed weak at £150 5s. for spot,

and £149 12s. 6d. for futures, making price as compared with last week 5s. higher on spot, and 5s. higher on futures.

Copper—Spot copper opened easy at £72 2s. 6d., futures £71 12s. 6d., and after sales of 400 tons of spot and 700 tons of futures closed weak at £71 10s. for spot and £71 for futures, making price as compared with last week £1 12s. 6d. on spot and £1 6s. 3d. higher on futures.

Lead—The market closed at £14 8s. 9d., making price as compared with last week, 8s. 9d. higher.

Spelter—The market closed at £25 12s. 6d., making price as compared with last week, 17s. 6d. higher.

Nova Scotia Trade News

Halifax, N.S., Aug. 30.

NO improvement in trade is reported. The mid-summer dullness continues. Some orders have been received for guns and ammunition from outside points, and sales of builders' materials are fair. Dealers are looking forward to a good Autumn trade.

The open hearth furnaces at Sydney Mines have been working to their full capacity for the present month, producing the finished quality of steel for which a ready market is found. On Friday last the record pour was made, one of the 40-ton retorts turning out 51 tons in one tap.

A special train of fourteen cars, all loaded with products of the Dominion Iron and Steel Co., was sent out from Sydney last week for the west. The train was made up of ten cars of rails for the Grand Trunk Railway, two cars of wire rods for the Ontario Tack Co. of Hamilton, and two cars of billets for the Montreal Rolling Mills.

The thirty coke ovens at the Winnipeg pit, Sydney Mines, which have been working for the past three years with only one break, are being cooled off preparatory to receiving a thorough overhauling. This plant is built off a German patent, and is the only one of its kind in Canada. These ovens compare most favorably with the more modern American patents; turn out just as good coke, and perhaps a trifle more consistently than the less cumbersome device from across the border.

The hardware stock of W. B. Arthur & Co., who became insolvent a short time ago, was sold by tender last week to Stairs, Son & Morrow, for 65 per cent. of its invoice value, which had been fixed at $22,400. The firm's real estate on Bedford Row was sold to A. L. Melvin for $3,800. The property on Slater street remains in the possession of Mr. Canavan.

Up to the present month the shipments of iron ore from Wabana, Newfoundland, to North Sydney, have not totaled up largely, not more than half a dozen cargoes being landed at the pier, or about 20,000 tons. Nevertheless the output at Belle Isle has far exceeded that of former years for the same length of time. The Nova Scotia Steel Co. are mining and running about 1,200 tons a day, besides using the bank which was piled during last Winter. The greater part of this ore is finding it way across to the Old Country, the proved superiority of the Wabana article making it in

The highest or any Tender not necessarily accepted.

Stock sheets may be seen at the Office of the Assignee, Edmonton; or at the Office of The J. H. Ashdown Co., Winnipeg, and Hardware and Metal, Toronto, Ont.

great demand. Six large steamers have been running regularly between Wabana and Rotterdam, carrying from five to eight thousand tons each trip. Since the installment of the plant the output has doubled itself and present employment to over 1,000 men. About the first of September the company will begin taking their Winter supply of ore to North Sydney.

PERSONAL AND TRADE ITEMS.

Montreal.

Mr. Stewart, of D. G. Kirk & Co., Antigonish, N.S., was in town this week.

Mr. Dowling, of Caverhill, Learmont & Co., is enjoying a well-earned vacation.

Mr. A. H. Campbell, of A. C. Leslie & Co., is enjoying his holidays on the lower St. Lawrence.

Mr. Sweet, of A. Sweet & Co., Winchester, paid Montreal a business visit during the week.

Mr. J. S. Morin, hardware merchant, of Henryville, was in Montreal, on business this week.

Mr. Chas. Millhot, of St. Monique, called on the wholesale hardware dealers in town, this week.

Mr. T. McC. H. Hutchinson, of Drummond, McCall & Co., is unable to be at business this week owing to illness.

Carmel Freres, have bought out the business formerly carried on by Versailles Freres., at 240 St. Catherine street.

Mr. J. A. Bremner, of Alex. Bremner & Co., dealers in cement and firebrick, has recovered from his recent illness.

Mr. Thos. L. Waldon, Winnipeg representative of Caverhill, Learmont & Co., spent a few days this week at headquarters.

Mr. A. C. Leslie, of A. C. Leslie & Co., metal merchants, has returned from the Old Country, and is again attending to business.

The stock of S. J. Grangers, 679 St. Catherine street, has been purchased by J. Joseph Sarrazin, who will carry on the business from this time.

Mr. F. W. Wilkinson, of B. & S. H. Thompson & Co., metal merchants, has returned from a pleasant vacation spent at East Boulton, Lake Memphremagog.

Mr. Gordon Seybold, of Seybold, Sons & Co., wholesale hardware merchants, is out on the road for a week, traveling along the G. T. R. front, as far as Brockville.

During the past week, Caverhill, Learmont & Co., have welcomed back to their fold the following vacation pilgrims: George McGowan, George Goldthorpe, and John E. Brown.

Mr. E. J. Rowlands, of Alex. McArthur & Co., manufacturers of building paper, has returned from his vacation which he spent in the west, visiting Hamilton, London, St. Thomas, and other cities.

Mr. John McAvity, of St. John, N.B., was in town early this week and he went west with his son, Mr. A. G. McAvity, manager of the Canadian Buffalo Forge Co., whose marriage took place in Toronto on Wednesday.

Mr. Wm. Karley, of Karley & Gibson, hardware merchants, Athens, Ont., was in Montreal for a few days this week visiting the many places of interest in the city. When met at the St. Lawrence Hall, he remarked that his visit had been very interesting. He looks forward to a prosperous trade in his section this Fall.

Mr. Feeney, manager of the Canada Saw Co., Limited, Ottawa, was in Montreal during the week, completing arrangements for the new factory of his company, which is to be erected at St. Henri. The enlargement of the plant will be very considerable, and the new premises will be a great acquisition to the industries of Montreal's suburbs.

The factory of Henry Walters & Sons, axe and tool makers, Hull, Que., is very busy these days, shipping orders to all parts of the Dominion. The business is under the immediate supervision of Mr. Walters, jr., who has developed it well, during the past few years. He is a graduate of McGill University, and has applied his trained mind to the important commerce of making fine axes and tools. He stated to a representative of Hardware and Metal, that his science course at McGill had been of the greatest service to him in business.

Toronto.

Mr. W. F. Finkheiner, Milverton, was in Toronto a few days this week.

Mr. Gilpin, of Gilpin Bros., Orillia, visited Toronto during the past week.

Mr. Wm. Good, of the Canada Paint Co., has returned from his vacation.

Mr. Joseph Myers, Stratford, called on Toronto plumbing supply men this week.

Mr. E. Eakins, hardware merchant, Brechin, spent a few days in Toronto this week.

Mr. T. W. Humphreys, mayor of Parkhill, was a caller on Toronto jobbers this week.

Mr. Sydney, of Christie Bros., Owen Sound, spent a few days in Toronto this week.

Mr. James Clark, Brechin, visited Toronto this week and called on the hardware jobbers.

Mr. Dickenson, of Dickenson & Allan, Hamilton, called on Toronto plumbing supply houses this week.

Mr. F. Anthony, who is building up a fine hardware trade at Norval, visited Toronto a few days ago.

Mr. S. P. Gourlay, well-known to Ontario plumbers, renewed acquaintanceships in Toronto this week.

Mr. Skinner, of Anderson & Skinner, hardware merchants, Keene, spent a few days in Toronto this week visiting the exhibition.

Mr. Sigmund Samuel, of Samuel, Benjamin & Co., Limited, has returned from a three months' tour through Great Britain and the continent.

C. M. Cutts & Co., Toronto, have taken out a permit to build two stores and

dwellings on Dundas street, at a cost of $15,000.

Mr. Victor Lee, brother of Mr. A. B. Lee, president of Rice Lewis & Sons, Toronto, died on August 24, after a long illness. Mr. Lee was well-known to the hardware trade and his many friends will regret his early demise.

Messrs. A. F. Hawke, Grimsby; A. Bechtel, Baden; G. A. Binns, Newmarket; Mr. Nicholson, of Nicholson & Robertson, Napanee, and Mr. Adolph, of Adolph & Bonnett, Listowel, were visitors at the offices of the Sherwin-Williams Co., in Toronto this week.

Mr. T. H. Hamilton, general manager of the Canadian Oil Co., Limited, entertained 40 of the office staff last Saturday afternoon on the launch Indiolo. At Long Branch games and races were participated in and supper was served at Meyers restaurant at Sunnyside, the Humber and the Island being visited in the evening.

Mr. T. G. Dexter, of H. S. Howland, Sons & Co., Toronto, has returned from a trip up the lakes. Mr. Dexter was favorably impressed with the growth of Port Arthur and Fort William since his last visit and with the favorable prospects for these towns as shipping centres. Everywhere Mr. Dexter found the merchants to be optimistic as to the possibilities for a large Fall trade. He noticed large stocks of lumber being carried in the yards, however, and as there was little indication of activity in its removal, he considers it possible that some stocks will be carried over, this causing a temporary depression in the lumber districts.

Elsewhere.

Mr. W. R. Hobbs, hardware merchant, Tillsonburg, is spending his vacation on a farm near Simcoe.

Mr. James G. Stewart is leaving Wingham to engage in the hardware business at Auburn.

Mr. Harry J. Peter, of the plumbing firm of Peter & Sylvester, Stratford, was married on Tuesday to Miss Maggie S. Ball, of the sme city.

Mr. T. G. Jackson, Whitby, having sold his hardware business to Mr. W. M. Pringle, has disposed of his new block to a Sarnia gentleman for $4,000.

Mr. D. Milne, of Sarnia, of the well known firm of Mackenzie, Milne & Co., hardware merchants, ship chandlers, and dealers in artesian well supplies, has returned from a trip to the coast.

Mr. H. V. Lawlor, who carries the grips with samples of "English" paints and acts as western commercial missionary for Henderson & Potts Co., Limited, of Montreal and Winnipeg, returned to the city last Saturday from a trip in the Southwestern part of Manitoba. Mr. Lawlor is looking forward to the second week in September, when he expects to hold down the manager's chair in Winnipeg during the absence of Mr. J. Irwin in Montreal. As this is not a society column and is not headed "On dit," Hardware and Metal refrains from making any formal announcement as to the object of Mr. Irwin's eastern trip, but it may safely be stated that it is not entirely—nor indeed principally—connected with paints and varnishes.

Have you drummed up "Metallic" Building Materials yet to the farmers in your district?

Many of them are going to put up some barns or other farm buildings, sure, or perhaps going to re-roof some old ones or put on siding.

It ought not to require much talk, when backed by samples, to show them why sheet metal is the right stuff for roofing or siding, and why the "Metallic" brand is best. He's been reading our ads. Suggest it to him and show our catalogue.

Samples—If you haven't them—sent free. Profits on our line are large—no stock to carry—catalogue makes the sale.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

PERSONAL THANKS.

The following, addressed to Col. MacLean, president of the MacLean Publishing Co., is from Mr. E. K. Spinney, Yarmouth, N.S., past president of the Maritime Board of Trade:

"I cannot refrain from again expressing my personal thanks for your generosity in the liberal manner in which you reported the proceedings of the annual meeting of the Maritime Board of Trade at Yarmouth.

"You have also received the official gratitude of the delegates to this meeting by their vote of thanks unanimously passed by them at the close of the session. Your representatives were all men of unquestioned high standing in their profession, which is an extraordinary compliment.

"I sincerely regret the absence of your esteemed self as I feel certain you would have enjoyed some features of the programme."

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Sept. 1, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

A LARGE part of the western wheat crop is already cut and as conditions continue favorable, the largest wheat yield in the history of the country will very soon be safe from harm. A year of unprecedented prosperity now seems assured and the trade are in the mood to buy liberally.

* * *

The Pease-Waldon Co. have leased the big store at 268 Portage avenue formerly occupied by Pengelly & Co. and they are now fitting up the premises for office purposes and for the display of their "Economy" heaters and "Florence" boilers, etc. It is expected that the new premises will be ready for occupation by September 15th. The old premises on Lombard street will be retained in the meantime for storage purposes.

* * *

Mr. T. L. Waldon, the western manager of Caverhill, Learmont & Co., is in the east this week on a holiday and business trip. He will visit Montreal, Toronto and other eastern cities.

* * *

The Gurney Foundry Co. are planning to build a large new warehouse in this city, but nothing definite has yet been decided. The steady growth of their western business has rendered their present Lombard street premises inadequate.

* * *

Prices are unchanged throughout our entire list this week. Business is very active in all general lines.

Screen Wire Cloth—Very little selling now. The price is still $1.55 per 100 square feet.

PAINT, OIL AND BRUSH TRADES

NINGPO VARNISH.

UNITED STATES Vice-Consul Cloud, Hangchau, China, calls attention to what is known among foreigners in this country as "Ningpo varnish," made from the sap of the "varnish tree" (Rhus vernicifera or Vernix vernicia), which grows very extensively in western and southwestern China. The name was originally given because varnishers from Ningpo were more skilled in its preparation and use than others.

The sap is gathered in the interior and brought to Huichoumin in the southern part of Anhui Province, where it is refined and then distributed to all parts of the Empire. It is sold by the retailer in the raw or pure state—that is, the pure, refined sap, and in the prepared form, which is a mixture of the refined sap with certain proportions of "wood oil." It is in the proper blending of these that the skill of the varnisher is shown, as the color desired, the wood to be varnished, moisture of the atmosphere, and temperature are conditions that enter into the problem. The uses of the varnish are manifold. Wherever varnish is desired the Ningpo kind is used, and is so far superior to the ordinary varnish of commerce as to be in a class by itself. It is particularly adapted to floors, tables, cabinets and such articles as are in constant use. It is also excellent for furniture of all kinds, as it does not scar easily and may be scrubbed with boiling water without the slightest injury to the very high polish of which it is capable.

The greatest drawback to its use is the danger of "lacquer poisoning" to the workmen who use it. This is similar to "ivy poisoning," and when the sap is fresh is regarded as rather dangerous. Once the varnish is dry there is no danger whatsoever. It may be used in any climate that has a rainy season or wet weather. The varnishing is always done during the wet season and is allowed to dry slowly as the moisture of the atmosphere decreases.

The market value of the pure sap, after refinement, is about $1.15 Mexican coin (about 53 cents) per catty (1 1-3 pounds avoirdupois), while the mixed varnish may be had for $0.56 (about 27 cents) per catty. It may be mixed ready for use before shipment, and does not deteriorate when once it has been properly blended. Something like a hundred years ago the Ningpoese had a monopoly of the varnish trade; but in some unaccountable manner they have lost it to the Huichau firms. Practically all the varnish used at the present time comes from Huichau, as its monopoly depends on a knowledge and skill which the Huichau people seem to be able to guard most effectively.

The supply of the crude sap would seem to be unlimited, as the trees from which it is derived are found in great abundance in all the middle western and southwestern Provinces. With proper methods of gathering the sap and of refinement it should be made one of the most profitable industries of China. So far as I am able to learn but little or none of it is exported to America.

POINTERS FOR PAINTERS.

MANY of our city painters have more or less trouble in paint peeling from galvanized iron. This is more often true in cases where galvanized iron is new.

This trouble can be avoided by coating the iron over with a wash of the following mixture:

Mix a solution of one-half ounce each of nitrate of copper, chloride of copper and salammoniac in one quart of luke warm water, and, when dissolved well, add to this mixture one-half ounce of crude hydrochloric acid. (This mixture should be made in a glass or earthen jar, as the chemicals will eat a tin pail.) After this mixture has been applied with a wide flat brush, let it stand until it forms a white powder over the iron, and when dry you must brush or dust the surface, removing all the whitish powder. Then paint with the following mixture:

Mix pure red lead with one-third linseed oil, and two-thirds turpentine, and have paint rather thin, keeping it well stirred from the bottom of pot. This priming should not dry with much more than an egg shell gloss, and should stand for at least seven days before the next coat is applied.

Second and third coat with any color of paint you choose to use, and you will find your job will stand well without the usual trouble of peeling.—Painter and Decorator.

ORIGIN OF OIL AND GAS.

There are two rival theories as to the origin of natural gas and oil, says the Engineering and Mining Journal. One (the organic) is that the products in question are the result of the decay and distillation of organic matter contained in the rocks; the other (the inorganic) is that the oils and gases are the results of the reaction between descending water and metallic carbides in the depths of the earth. These metallic carbides are supposed to exist in the deeper layer and it must be said that there is much in their favor. Most practical men adhere to the "organic" origin of oil and gas. Probably most chemical geologists would accept a theory uniting the inorganic and organic explanations.

WASHING GLASS SAND.

IT is a very interesting sight to watch the process of crushing, washing and drying sand for the manufacture of glass, says a writer in the Margantown Post, who gives the following description of the methods employed by a local company:

The sand shot down from the cliff with powder crumbles almost like sugar; then is dumped into cars and sent down the mountain side by means of incline and drum, more than 1,800 feet to the mill. There self dumping appliances discharge it into a giant bin from which it pours steadily into the grinders made of a great hopper and two immense revolving wheels on a pivot. From this it passes through a screen into the first washer—a mass of sand almost as fine as sugar.

The washers are eight great screws slanting upward and drawing the sand up with them against a stream of pure mountain water which constantly carries the dirt and impurities through channels prepared below. As fast as the sand reaches the head of one screw it is caught by another and so on until the head of the final screw is reached, where the water is almost cut off and the sand drops into a bin. Then it is caught up in an elevator and dumped headlong into the great revolving cylinder of the dryer.

The drying process is unique but very interesting; partly because it is novel, partly, no doubt, because you can watch it without getting so badly splashed. From a furnace fired with coke and resembling a small sized sample of another and after life, the heat is carried through an interior flue of the great drying cylinder, which slowly revolving, carries the sand forward, permitting it to dry as it goes, until upon reaching the tail end, the sand is very dry, and very hot. That done, the process is complete. The sand is then ready for shipment, and is carried away by a system of little elevator buckets to a bin for shipment.

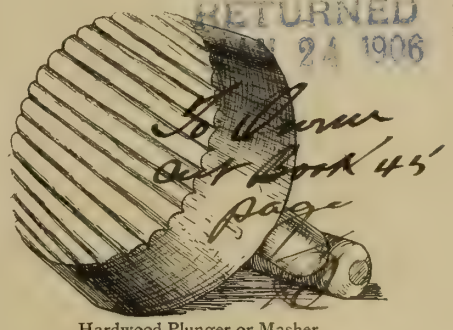
A very large part of the local company's immense tract is comparatively worthless as a silica or glass sand, for one or more of several reasons. If the sand is filled with small white pebbles or gravels, it is very inferior, because no amount of screening or washing will take the pebble out; again, parts of the sand ledge are filled with ferric acid oxide, or particles of iron ore, and when a part of the grain of silica cannot be removed Or, if there is too great percentage of alumina and clayish-substances the sand is worthless. The first of these deleterious elements produces what glass men call "blisters" and "stones"; the sec-

ond gives it a greenish color, and the third produces bad blass generally, sometimes one effect and sometimes another.

U. S. FLAXSEED MARKET.

OCTOBER flaxseed dropped down close to the export basis when it sold at Duluth on Aug. 21, to $1.08. The observer who views the market from a distance finds it difficult to understand this weakness. Receipts at Duluth and Minneapolis are nothing as yet and give no tangible evidence of the expected big crop of seed. That it will come in a flood in October seems assured from present reports of the condition of the standing flax. It is this promise of a big crop that has made everybody so eager to sell that prices have slumped below $1.10. Now the question is, will the market go lower or will exporters and the American company step in and take all offerings below present figures.

Our impression is that the crop is likely to be marketed unusually early and that after the bulk of it has been taken care of prices will advance. The reasons for this opinion are the already heavy sales for October delivery, covering nearly all that is likely to come to market during that month; and the tendency of farmers to sell flaxseed rather than wheat when the former is high and the latter low, as is the case at present. The early marketing of the crop will break the price, as it is evidently doing now, and it may result in some peculiar conditions later on, especially if seed is exported that could be absorbed in this country.—Paint, Oil and Drug Review.



NEW WHITE LEAD PIGMENT.

THIS pigment, according to its inventors, Heyl and Wultze, is a kind of precipitated white lead of the type formed by the action of carbonic acid on solutions of lead. Up to the present it was necessary, in order to obtain such precipitates, to employ basic solutions, such as those furnished by dissolving litharge in neutral lead acetate. It was also known that a precipitate of lead carbonate could be formed by the prolonged action of carbonic acid on neutral lead acetate (solution of lead saccharate), but that the product was crystalline and had little covering power. The inventors find, however, that with the aid of carbonic acid neutral lead saccharate will give a precipitate of excellent covering power, superior to ordinary white lead in this respect, the necessary condition in the preparation being that the carbonic acid is forced into the solution of lead saccharate under pressure. The yield is also increased by the use of dilute solutions. In point of composition the new product approaches ordinary lead carbonate, containing as it does 16.05 per cent. of carbon dioxide, whilst the pure carbonate should contain 16.49 per cent., and ordinary white lead only contains 11.36 per cent.—Rev. Prod. Chim.

Most any man can do business when there is lots of it to be done. It takes one of brains and hustle to keep trade going in dull times.

STRAINING AND SEEDING PRESS.

THE 4-S-Food Press Co., 70 Warren street, New York, are manufacturing Stocking's simplex straining and seeding press, shown in the accompanying illustrations. The set consists of four pieces—No. 1, general straining pan; No. 2, seeding pan; No. 3, plunger of hardwood, and No. 4, enamelled-ware

Hardwood Plunger or Masher.

handled receiving pan. The enamelled receiver is 9x5½ inches and holds about three quarts. The straining pans, of block tin, have strainers of perforated metal, perfectly smooth both sides, for easy cleansing, instead of being made of

Driving and Feeding Press.

wire cloth. One of the strainers for general use has perforated sides and bottom, the holes about 1-16 inch diameter, the other pan for straining fruit being perforated at bottom only and having much smaller holes. The plunger or masher with corrugated bottom is 4 x

Sectional View of Press.

3½ x 1½ inches in size, with a bevel or flare of the same angle as the straining pans, as seen in the sectional view, Fig. 2, which greatly facilitates the filtering or straining processes. It is said a gallon of stewed pumpkin can be strained in 60 seconds, 2 quarts of apple sauce in 30 seconds, and soups, broths, gruels, gravies, etc., very rapidly.

"Compete or Perish"

is the inexorable law of the land. The Canada Paint Company respectfully desire to call attention to the fact that they are now making arrangements to **keep** their old customers and **make** new ones for the Fall of

1905

and the year of

1906

and beyond !

Progressive Hardwaremen will please remember that we are without a doubt

First Hands

for all painting materials. Our volume of business is growing steadily year by year. We make systematic departures out of the time-worn, beaten track to assist our customers, and a pot of paint bearing our name speaks for itself and does not require exhaustive efforts to sell it.

We **compete** for small or large orders from the trade, and invite enquiries.

THE CANADA PAINT COMPANY, LIMITED

Paint and Varnish Makers.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 1, 1905.

THE words "quiet but satisfactory" will just about describe the condition of the paint and oil markets of the Province during the past week. Generally speaking, there has been no change in prices, though some firms have advanced certain lines whose raw material has experienced a raise in price.

Gum shellac has advanced and those manufacturers who had neglected to stock up at the old price have been compelled to raise the price of shellac varnish, in order to protect themselves against a positive loss. Those who have stocks on hand, however, are not disposed to force the prices above the figures quoted in our price list.

In spite of a report from the west that turpentine has gone up, no change has been made in the eastern market. Linseed oil is firm at the prices we gave last week, and it is not expected that there will be any further drop in the near future.

Outside of this, the trade is without feature.

Turpentine—No change has been announced in the price of turpentine, though it is still very strong in the local market. Our quotations are: Single barrels, 89c. per gallon. Two barrels or over, 88c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—The market has recovered its steadiness, and it is not expected that there will be any further drop, if present conditions continue. We give prices: Raw, one to four barrels, 49c.; five to nine barrels, 48c.; boiled, one to four barrels, 52c.; five to nine barrels, 51c. f.o.b. Montreal. Net 30 days.

Ground White Lead—A good demand is reported for the season. Prices are unchanged, and we still quote: Best brands Government standards, $5.35 to $5.50; No. 1, $5.10 to $5.25; No. 2, $4.75 to $5.00; No. 3, $4.50 to $4.75, all f.o.b. Montreal.

Dry White Lead—Good orders help to maintain the strength of this market. Our prices are: Barrels, $5.25; 100-lb. packages, $5.50; six or ten-lb. tins, $6.50.

Dry White Zinc—Though not remarkable, the sales of this article denote a healthy condition. We quote: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (ground in oil)—Orders are being received in good volume, and considering the season, the trade is very satisfactory. Our prices are: Pure 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—Last week's conditions are still good. Prices are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral— Our quotations are as follows: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—A fair trade is still being done, in spite of the season being so far advanced. We quote: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4,25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—Owing to the big advance in shellac gum, some manufacturers have raised the price of varnish, but this lead has not been universally followed. The lowest prices quoted now, are as follows: Pure white in barrels, $2.30 to $2.50; pure orange $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—No change is to be noted either in price or in the condition of the market. We still quote from $1.20 to $1.40 per gallon.

Castor Oil—Following the lead of the manufacturers, jobbers have advanced their prices slightly during the week. Present quotations are: 8 1-2c. to 9 1-2c. according to lots.

Litharge—We quote: Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—The cool weather of the past week has had the effect of stimulating the trade, and this, added to the fact that the nights are growing constantly longer, makes dealers confident that the annual Fall awakening is at hand. As yet there has been no change in price.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, September 1, 1905.

NO changes in prices are reported this week other than a slight weakening in turpentine, the advance of 4c. last week not being held firmly. The ruling figure now is 92c. for single barrels. There is very little on the market, however, and prices are not likely to fall much lower than at present. Linseed oil is firm at the prices quoted last week.

White lead has not advanced any as yet, but continues very heavy and in some quarters there is considerable talk of higher prices. Mixed paints are very

When you are visiting the Exhibition at Toronto, we will be glad to have you call at our exhibit near the centre of the Main Building.

active, business done during August having been higher than any previous year.

The glass situation is very peculiar as rumors of another strike in Belgium are prevalent. It is said that the glass workers will lay down their tools again in October and exporters who are criticized for failing to make shipments promptly lay the blame for the delay on the recent strike and point out that if another occurs they may be unable to make shipments at all. Glass continues firm at $3.80, but conditions seem to be ripe for an advance.

White Lead—Ex Toronto, pure white $5.50; No. 1, $5.02 1-2; No. 2, $4.65; No. 3, $4.40; No. 4, $4.15 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white. $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 51c.; boiled, 54c.; 5 to 9 barrels, raw, 50c.; boiled, 53c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrel, 92c.; 2 to 4 barrels, 91c.; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Prospects for a good Fall trade are excellent. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass— Glass is very firm at present prices (see current market quotations), and an advance is expected.

WINDOW GLASS—MONTREAL.

Conditions this week are described as being worse than ever, very little glass having been received by local dealers, of late. A small quantity is on hand, but, even yet, it cannot be said that jobbers have caught up to their orders. Matters are still further complicated this week by the announcement from Belgium that another strike is threatened by the glass workers, to take place in October. Consequently, manufacturers will not undertake to guarantee delivery on orders now being booked, until November, at the earliest, and not even then if the threatened strike eventuates. It is said that the shipments coming to Canada are small compared with the imports into other countries, owing to the better price commanded by glass in other markets. Still, every ship from England and the continent brings its quota of glass to the large Canadian dealers, and they are thus enabled to supply small orders, while refusing large ones. There is no change in prices but the difficulty is to get the goods at any figures. We quote : First break, 50 ft. $2; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 feet, $4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break. 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50 seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

CANADA PAINT CO. AT PLAY.

For the thirteenth times in the history of the Canada Paint Co. their annual picnic was a great success. It was held Saturday, Aug. 19, at Otterburn Park, Montreal. The weather was fine and the programme elaborate, while all things seemed to harmonize to make the event one of real merrymaking and old time rejoicing. Over 500 people attended. What was particularly noticeable was the excellent behavior of everyone, even though no restraint was placed upon enjoyment. The football games delighted all and the list of events recorded tells eloquently of how thoroughly the programme was carried out. The officials were: Judges, Messrs. J. Campbell, D. Robillard and D. Munro; starter, Mr. T. Emo; floor manager, Mr. Paul Jones; committee, Messrs. F. Thibault (chairman), H. Hawkins, S. French and G. Edington; secretary, Mr. E. Coleman; treasurer, Mr. F. Bell.

IMPERIAL FRENCH GREEN

is preferred by skilled painters because of its fineness of texture, covering capacity and great durability. Acknowledged to be more permanent than Nature's Greens.

Insist on it once and you will always use it.

Be sure this label is on the can and take no other. See sample cards.

Humbug In Selling Horse Nails.

Abe Lincoln was about right, when he expressed his opinion of "Humbug" in this oft-quoted saying :—"You can fool all the people some time, and some people all the time : but you can't fool all the people all the time."

"Humbug" has been a feature in disposing of, and in statements made regarding some kinds of Horse Nails sold in Canada. For example :—a certain manufacturing firm hailing from the United States have been pushing the sale of their second grade Horse Nails in this market for some time. This particular brand of nails is sold in the United States at one half the price of their regular goods, and is recognized by the trade as a competitive low-priced nail. The inference may safely be assumed that they are only one-half as good. And yet some of our Canadian buyers are led away by a little "Humbug" to pay more for this second grade brand than for the old reliable "**C**" brand, **made in Canada by Canadian labour for forty years from the best material known or used in the world for making Horse Nails —Swedish Charcoal Steel.**

How is it done? We will let you into the secret. **By cutting the price in the small sizes, of which small quantities are sold, and increasing the price of the staple sizes, of which the largest proportion is sold.** An example will show how it works out. Take size No. 4, and our experience shows that for every pound we sell of that size, we dispose of 100 pounds of No's 8 and 9 combined.

Just see how this works out :—

We sell "C" brand First quality. Per box					They sell "Black Prince" Second quality. Per box	
@ $6.00	$24.00	4 Boxes, 100 lbs.,	No. 4.		@ $4.00	$16.00
@ 2.75	60.50	22 " 550 "	No. 8.		@ 3.00	66.00
@ 2.50	45.00	18 " 450 "	No. 9.		@ 2.90	52.20
	$129.50	1,000				$134.20

Difference in favour of "C" brand for every 1,000 lbs. or 40 boxes, $4.70, say 12c. per box.

Don't fool yourself by thinking "Yankee Doodle" is giving you small sizes at cut prices without getting it out of you.—That is only a little "humbug" in selling Horse Nails to the unsophisticated Canadian. Buy the old reliable "**C**" brand. Pay a fair price, and get the best, and "Made in Canada."

Article XIII.

HINTS ON HOT WATER HEATING.

As promised in a previous article, we prepare now to deal with the work of actually installing the piping system, and will begin with the boiler, which, if of the horizontal sectional type, such, for instance, as the "Daisy," will be put together section by section as indicated by the numbers found at a point near the back of each casting, section No. 1 being placed next the fire-pot section.

The planed iron surfaces on the sections and the "water leg" being carefully cleaned off and given a thin coat of graphite and oil, which permits the rubber washers to easily find their "bed" Red lead is often used instead of graphite, and makes a good joint, but, because it is very difficult to remove, should a section have to be replaced, it should not be used.

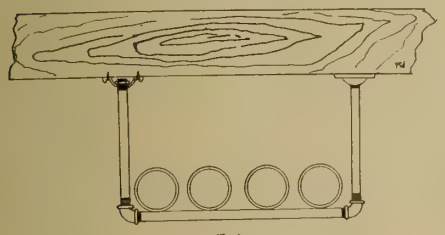

Fig 1

Having put the boiler together in its proper position, first having made sure that the grate section is set on a good foundation, and is level, cut the pieces of pipe which run vertically from the headers to supply the mains, taking care that the elbows on the top of all flow and return mains are brought to the same level, and, for the sake of appearance, it is well where no pipe larger than 2-inch is used to have them all of one size; for instance, if there are two 2-inch mains and one 1½-inch main taken off the boiler, the best appearance would be obtained by running up three 2-inch mains and putting on the top of one of them a 2 x 1½-inch elbow.

As was said in a previous article, the height of these elbows, or the distance between them and the ceiling, will depend upon the length of run, and in consequence of that the necessary rise in the mains before they reach the riser to the radiator farthest away from the boiler.

The various radiators having been placed, proceed now, if it has not already been done, to bore the holes through the floors in the proper positions, so that for every pipe that leads from the basement to the upper floors there will be a hole bored through the ground floor into the cellar.

Having the holes as a guide, and having in front of him the plan of the piping, indicating sizes, etc., the fitter will be able to take the necessary measurements of the pieces which, when screwed together, will constitute his "mains"; and in taking the measurements he must bear in mind that except in a few cases the openings in the flow and return must not come opposite each other, but be far enough apart to allow the branch connections to be taken off side by side on the same level and preferably 3½ or 4 inches centre to centre.

The branches are always taken off the top of the mains (both flow and return) either by having them turned to look straight up and using a close nipple and a square elbow, or by turning the opening in the "T" to an angle of 45 degrees, looking in the direction in which the branch is to run, and using a close nipple and a 45 degree elbow.

The latter plan is the better, for the reason that with a 45 degree elbow the branches can be kept down much nearer the level of the mains, and in that way allow more head room, and, in addition, there is only about one-half the friction in a 45 degree elbow that will be found in one of the square pattern.

As the fitter progresses with the putting in of the mains, he must put up temporary hangers, which are best made out of three pieces of board nailed together, one horizontally, supported at each end by a piece nailed to the joist overhead after the mains are completed, and before any of the branch connections are run he must go over them with a level, blocking them up or lowering them on the temporary hangers as may be required, until a correct grade is established from end to end, having, as has been said, a rise of at least an inch in every ten feet from the boiler to the most extreme ends, and, so far as this rise is concerned, it applies to the branches as well as the mains.

It is best to put up the permanent hangers as soon as the work of leveling is completed, and these hangers may be one of many designs in use, but the best kind, in the opinion of the writer, is that made of ⅜-inch gas pipe similar in form to that shown in Fig. 1, in which the horizontal piece at the bottom is just long enough to reach the outside edges of the mains which it supports, and the vertical pieces have a moderately long thread on the lower end with a lock nut screwed on the upper end inside the hanger plate, the upper thread being screwed to or threads through the locknut and well riveted, so that when the whole fixture is secured to the joists overhead the vertical pipes may be screwed down a thread or two into the elbows, drawing the latter up so that the horizontal pipe may take the strain; the locknuts are riveted on so that they will not "unscrew" when the vertical pipe is being turned into the elbows.

When putting up hot water or steam pipes, care must always be taken that they are not bound in any way, as for instance, by having the ends run tight against a stone or brick wall, for the reason that when heated they expand a greater or lesser amount, and if free movement is prevented they will "buckle up" in places and probably break the fittings connecting them together.

After completing the mains, the branches are run to each floor, a floor or ceiling plate being provided where the pipes pass through the floor and ceiling. Ceiling plates having a setscrew to fasten to the pipe are the best. The connections to the various radiators are made by means of union valves and union elbows, or by ordinary valves and elbows and right and left-threaded nipples, the nipple used in the elbow being ⅜-inch longer than that required for the valve.

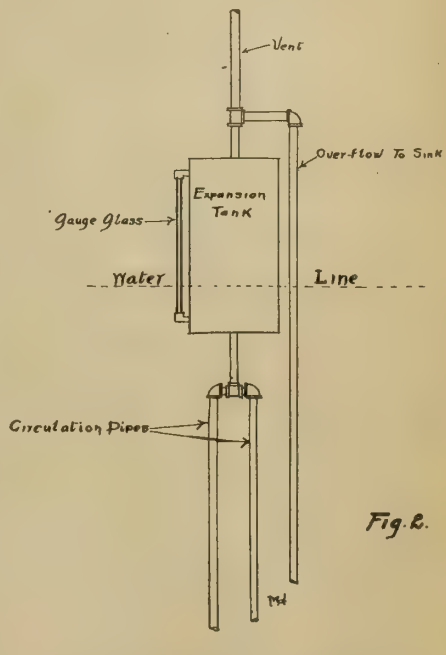

Fig. 2.

A small sheet galvanized iron tank, called an expansion tank, must be connected to the system and placed above the highest radiator. This tank is used for receiving the increase in the bulk of the water in the whole system, caused by its expansion by heat, and is so arranged that when the temperature in the system is lowered, the water may pass back again into the pipes. With this object in view a connection is usually run from the "return" of the nearest radiator to the bottom of the tank.

When, however, the tank is so situated that it is likely to freeze, a circulation

must be kept up, and this is done by means of connections such as those shown in Fig. 2, where the "circulation pipes" are 1-inch pipes, connected to the flow and return of the nearest radiator and together, and to the tank as shown.

The "overflow to sink" is connected to the top of the tank in the manner shown, with a pipe taken out of the top and extending up say a couple of feet; the object of the vent is to prevent the water in the "overflow" from syphoning the water in the tank and collapsing it. The overflow may, of course, run to any fixture as well as the sink.

A gauge glass indicates the amount of water which should be in the tank when the temperature of the system is at a moderately low point, so that with reasonable expansion or contraction the water line can always be seen.

A "feed cock" must be provided for filling the system, and, while it may be connected to any pipe which affords a passage to the boiler, it is most convenient to have it near the expansion tank.

A blow-off cock must also be provided and placed on the boiler at the lowest point. It should be of larger size, say 1¼-inch or 1½-inch, and connected directly or indirectly to the drain.

It will go without saying, of course, that all of the pipes in the basement should be covered, in order to prevent the escape of heat, for the reader may be sure that every unit of heat so escaping will, just to that extent, affect the heating surface upstairs, and the writer has found that, everything considered, ¾-inch hair felt is the best covering for a hot water system, the felt to be tied round and round with good cord and then covered with strong factory cotton, neatly sewed on with white cotton string, the seams, as far as possible, to be kept out of sight.

The boiler should also be covered with asbestos plaster or other good non-conductor about 1½ inches thick.

PROBLEMS CONFRONTING THE PLUMBER.

Extracts from a paper read before the National Association of Master Plumbers, Atlanta, Ga., June, 1905, by J. J. Wade, Chicago.

TWENTY-THREE years ago the National Association of Master Plumbers of America was formed. I had the distinguished honor—and I say it not self consciously, but rather in great pride—to christen the organization with the name it now bears. The infant of a score of years ago has developed to the giant, but you who watched over the young days of her career and who guided her to her present high place in the esteem of men, must still be mindful of the necessity of extending to our organization a strengthening arm, and a voice which in its encouragement will continue to inspire the plumbers of America to make this body of men a fit setting in its splendid ambitions for the loyal and progressive quality of its membership.

We gathered together to promote our social and commercial welfare, but that our basic principle was to educate the mind of the plumber in the progressive methods which scientific discoveries would compel him to adopt; that we were desirous of centralizing the intelligence and influence of our members against imposition, injustice and encroachment upon our individual rights; that we would aid original investigation and the invention of sanitary appliances; that we would foster a spirit of harmony and co-operation between the master and the journeyman for the advancement of our mutual interests and the advocacy of a distributive justice; that we would encourage any and all legislation whose object was to promote the health of the people, and we resolved to secure for our members fair and equitable treatment in their dealings with the manufacturers and supply houses.

How well we have accomplished our objects, a mere glance at the pages of trade history will suffice to satisfy even the most critical mind. And if among all of our aims and accomplishments, there is a particular source of encouragement and congratulation, it lies in our success in the passage of sanitary laws. Twenty years ago, but two cities, New York and Washington, had laws to govern the practice of plumbing. Today the State itself has almost universally taken up the question of sanitary legislation, while our cities have followed its lead by the adoption of municipal ordinances. As a result of the enactment of these sanitary laws, we plumbers of Chicago point with pride to a reduction in the death rate of our city from 30 in 1,000 to 10 in 1,000, while a recent bulletin of the health department declares that typhoid fever—pre-eminently a filth disease—has all but disappeared from our midst.

Much Yet to Be Done.

But our labors are not completed. There is much yet to be done to further our aims and our interests. We but pause a moment to confirm our faith in our organization and to strengthen our ambitions for the future by a glimpse at an honorable past. We have demonstrated to the tradesmen of our land that we will, by our combined efforts, resist invasion of our rights as individuals, and that an attack upon the humblest member of our organization will establish the knowledge that an injury to one is the concern of all.

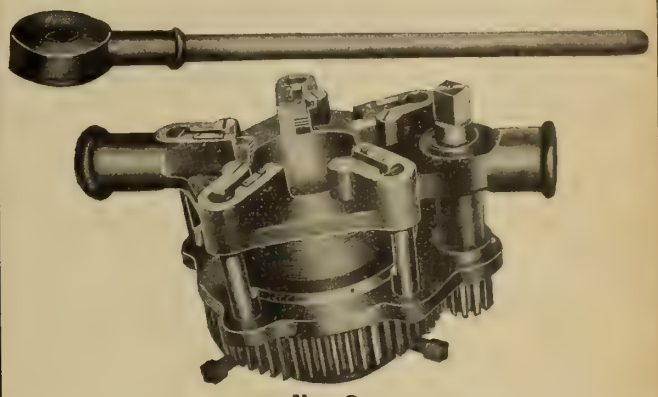
Our relations to the manufacturer are, in the main, friendly. But, here and there, in their ranks, there is the disreputable manufacturer or jobber who, with one hand, sells direct to consumer, and, with the other, to the weak-kneed master plumber, who is too low in spirit to resist this assault on his right to protection. As a rule, these dishonest plumbers have no knowledge of sanitary plumbing. They just know enough to pick up some cheap material to assist the avaricious jerry builder and the greedy landlord. They install these filth traps in buildings rented to helpless victims, who are assured that the plumbing is strictly first-class. These are the men who bring disgrace to our trade. I sincerely trust the day is not far distant when they shall be legislated out of existence by the passage and enforcement of the strictest possible laws governing the installation of plumbing goods.

The Mail Order House.

A new and portentious danger threatens our trade, not generally recognized, but none the less real. It lies in the competition of the mail order house. I am informed that the volume of business by these houses in Chicago alone last year, amounted to $1,500,000 in the sale of goods sold usually by the plumber in the ordinary course of business.

What does this mean? It means that the manufacturer's best customer will no longer be the plumber, but the mail order house. It means that legitimate trade channels are no longer respected. It means that the mail order house will soon launch upon the manufacture of enameled ware, brass goods, etc. To protect our interests in this unjust encroachment on our rights, I would suggest the adoption of three preventive measures. First, to abolish the rule forbidding the sale of goods which we do not install. This would at least be of benefit to the plumbers in the country districts, because they could then sell indiscriminately to all purchasers. This suggestion might sound heretical to my comrades, but in my judgment it is the part of wisdom to make tradition keep step with conditions; but should tradition fail, progress should take its place. My second suggestion to ward off this evil is by recourse to legislation. The absorption by these moneyed plants of trade interests is a peril—however regarded. Even to speak of the hope of obtaining legal protection therein approaches the absurd, but do not forget that nothing of good was ever accomplished except by a constant, vigorous and well founded agitation. My third and last suggestion would be the adoption of means to bring about a more uniform price list. This may be accomplished by the publication by this association of a catalogue of plumbing staples, a separate edition being made for the four geographical divisions of the country—the prices being adjusted to fit the conditions which prevail—relative to freight, etc., in each division. It is a well established fact that prices as printed in the catalogues of jobbers and manufacturers often give to prospective customers a wrong impression of the plumbers' profits, because the net cost of goods to the plumber, after the freight, cartage and storage charges have been figured, is in excess of the list price shown in the manufacturer's catalogue. In my humble opinion, it would be entirely possible to compile a catalogue of prices which would more nearly represent an equitable profit to the plumber, and, therefore, I believe that the publication of a well printed and illustrated catalogue would meet

Ramsay's Creosote Stains



These Stains are becoming more popular every day. Have you seen a set of our samples? If not, why not drop us a card to-day and ask for prices and samples? You may require these any day. Many buildings will call for Ramsay's Creosote Stains this Fall.

A. RAMSAY & SON COMPANY

Est. 1842 MONTREAL PAINT MAKERS

The "Toledo" Adjustable Threading Device

A new principle in hand-power pipe-threading.
Threads pipe from 2½ inch to 4 inch, inclusive

No. 2.

This tool weighs but 60 lbs., is strong and durable, yet light enough to permit of its being carried from place to place on outside work.

Ask your jobber about them; if he don't know write us for Catalogue and Discounts.

Plumber's Relation to His Trade.

Having made these suggestions, I trust you will bear with me for a few moments in a discussion of the plumber in his relation to his trade.

It has been demonstrated by experience that all the work of a people is done better and more efficiently according as the individual is encouraged by the hope of individual advancement as his personal reward. Our achievements in the mechanical world are affirmative, but it is easy to describe our material progress by negatives. We have not riches. We have not the testimonials to the results we have achieved commensurate with the efforts we have expended. We have not the commendation of communities, nor the people's applause to mark our wonderfully progressive steps in the introduction of safeguards to the health of the individual, nor do we receive from society that recognition which the plumber by his devotion to the germination of improvements in sanitary science so richly deserves. About all we do have is the case of mind and that consciousness which reveals to us the knowledge that we have at least accomplished something when with bent back and sweating brow we cut our portion of the smooth road over which humanity marches forward from generation to generation.

In the early days, circumstances forced us to be broken on the wheel necessity compelled us to drive. But times have changed. The men of other trades have accumulated wealth, but still we plod on in the same old grind of the treadmill, because the plumber figures to get the job instead of figuring to get the profits; because the plumber figures his profit on the net cost of his material and labor, instead of on the gross cost; because every man of us is driven to the extreme limit in his estimates on work to be done by the excessive, the unreasonable, the unwarranted and the unfortunate methods of competition in the plumbing trade, which finds us furnishing estimates for work on a 10 per cent. basis of profit, when the running expenses attendant upon the completion of the same approach a 12 or 15 per cent. basis.

For this evil there must be a remedy. Competitors in other lines of business have met it and have overcome it. The life of our trade depends upon a successful solution of this problem. Particularly do I advocate the discussion of ways and means in committee cogitations to emove this most gigantic obstacle to our financial welfare.

VENTILATION IN ENGLAND.

THE ventilation of the main building of the new Birmingham University is done in a very thorough manner, says an English exchange. Fresh air is brought in from the outside walls at floor level, where there is provided a louvre register controlled by levers and quadrants, and on its way to the room the air can be warmed by passing over the heated surfaces of the radiators. In most of the blocks these registers are provided for fresh air inlet in nearly the whole of the window recesses, where there are no radiators. The extraction of the air from the blocks is provided for by electrically driven propeller fans of two feet diameter. In the semi-circular window frames these are as near the ceiling as possible. A continuous current motor is used in combination with the fan; it is mounted on strong cast iron frames with wrought iron adjustable arms. The blades of the fan are made out of hard sheet brass fitted with long phosphor bronze bearings. The whole of the moving parts are admirably balanced, and run with a minimum amount of friction. The ventilation of lecture rooms and museums will be done on very similar lines, the fresh air being brought in at the floor level, and the vitiated air extracted by fans working in the corridors. In the great hall the fresh air is brought in by a large fresh air shaft from the top of the building, and is connected to fresh air ducts leading to the several radiators for the dining rooms. The whole of the heaters,

Signboard on Lookout Mountain, Erected by H. Mueller Company at time of Plumbers' Convention at Atlanta, Georgia.

steam, condensed, hot water warming, and hot water service pipes not intended to be used for the purpose of radiation will be covered with plastic asbestos non-conducting composition to a thickness of about two inches. The radiators are fitted with detachable plates or cast-iron cheeks, placed between sections in such a way as to give ample space for the introduction of fresh air under the base of the radiators or between the sections, from the outside wall above the floor. The plates are made removable for dusting purposes or sweeping under the radiators. Those radiators which are fitted in the great hall are placed in preference in batteries or stacks in the centre of the hall, in a duct directly under the floor; these are in addition to the ventilating radiators on the outside walls. Fresh air in ducts is also introduced to these stacks of indirect radiators, passing out through warm air outlet gratings in the centre of the hall. The heaters used for hot water warming and hot water service are upright and horizontal type, the outside shells being made out of three-eights boiler-plate. The heaters are fitted with solid-drawn copper tubes, which give perfect freedom for expansion and contraction. The general arrangement of the details is on the latest and most approved principles.

ALUMINUM RADIATOR PAINT.

AS a preliminary to painting a radiator with aluminum paint, says the Decorators' Gazette, clean all grease, sand and dirt, being sure to wash all greasy spots with benzine. When the iron is clean take any good bronzing liquid and stir enough aluminum bronze into it to make a paint that can be easily spread with a camel's hair brush. Apply one or more coats, as the case may require. If you prefer to make your own bronzing liquid, take equal parts of gold size japan and light-colored baking varnish and mix them well. To each liquid ounce of this mixture add three ounces of turps. Shake well in a bottle and it is ready for use. If the aluminum paint doesn't give you sufficient lustre apply a coat of baking varnish to your radiators, and when it gets tacky dust the dry bronze on with a camel's hair brush or tuft of cotton, spreading a large sheet of paper on the floor under the radiator to catch the surplus bronze, which can be used again.

NOVEL HEATING SYSTEMS.

Not long since ten existing stalls in the roundhouse of the N. Y., O. & W. R. R. Co., at Middletown, N. Y., were equipped by the B. F. Sturtevant Co., of Boston, Mass., with a system of heating and ventilation particularly designed to rapidly remove the snow and ice from the running gear of the locomotives during the Winter season. This house has recently been doubled in size, making twenty stalls in all, with nearly three-quarters of a million cubic feet of space. It is stated that during the past Winter when the thermometer was from 5 to 20 degrees below zero, engines could be thawed out in from one to two hours, although completely covered with snow. In the old roundhouse which this superseded, and in which the pits were equipped with steam pipes, it required from five to six hours to accomplish the same result.

HOW TO POLISH METAL.

A liquid metal polish formula was recently given as follows in the Blacksmith and Wheelwright: Take 8 ounces of Spanish whiting, which must be perfectly free from grit and put it into 1 quart of gasoline. Shake up the whiting and gasoline well. The whiting will settle immediately, leaving the liquid as clear as water. To remedy this and, further, to make it a better polishing agent, add to each quart of the mixture 32 drops of oleic acid—no more, no less. Shake again, and the whiting will not settle. Apply to gold, silver, nickel, brass, glass or any kind of metallic surface with a piece of cotton flannel, rubbing well. Polish with a piece of same cloth.

Most of the silver in the Cobalt region is on the surface, and consequently there is no need of blasting. All that is necessary is to split the rock and pick it out with crowbars.

For a Man with the Discrimination You've Got—the best can't be too good

Those tradesmen who have made the greatest success in business have learned from experience that "the best only" is the most paying principle and is invariably the cheapest in the end.

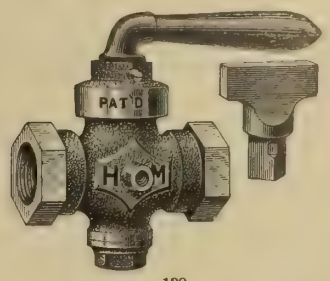
Knowledge of this fact makes us feel sure that you will derive unlimited satisfaction from adopting

The NATURO Closet

It is not only better than other Closets but the rest cannot be compared with it, for the NATURO possesses points of merit peculiar to itself and lacking in all others. First and foremost—it is a means of creating and sustaining good health ; then again its construction is such that cleanness is unavoidable.

These and more facts in its favor are easy of proof and cause the NATURO Closet to sell at sight with good profit to the plumber and a steady increase of business that is sure to follow its introduction.

For further particulars, drop us a line.



THE NATURO COMPANY

MUELLER GROUND KEY WORK

No. 49 Stop and Waste Cock

c-139

It is an easy matter to calk or solder a casting which shows a leak under a hydraulic test, but such a casting is still defective and may cause trouble at any time.

In testing Mueller Stop Cocks the castings that show a defect are condemned. The only cocks that are marketed are those which show no signs of leaking under 200 pounds pressure, and which we are sure will give our customers no trouble.

Mueller Stop Cocks are made in solid handle, socket head and patent cap patterns in all pipe connection styles. The cock illustrated is the patent cap pattern, iron pipe style.

Each cock bears the Mueller trade mark and is *unconditionally guaranteed.*

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, September 1, 1905.

SALES in all lines continue excellent, satisfaction being expressed at the week's business. The predicted advance in brass goods has not materialized, as the manufacturers have not yet issued their new prices. Jobbers, however, have been compelled to cancel prices on some special lines, and there will no doubt be a general advance, following the publication of the new manufacturers' lists.

The steady advance of tin as well as pig lead has raised the price of solder, which cannot now be manufactured at the prices quoted a fortnight ago. We give, this week, figures that may be taken as the minimum at time of writing. A still further advance may be noted, in half-and-half, if the metals composing it continue in their upward trend.

A remarkable feature of the month of August, just completed, has been the steadiness of lead pipe at a price which was not to be expected, in view of the uninterrupted advance of pig lead. Even now, it is hard to say whether or not it will respond to the tone of the pig market, though it may be safely affirmed that, if pig lead continues to strengthen in price, the figures on pipe will have to be revised before long.

Aside from those mentioned, there has been no change in prices during the week, the condition of the market remaining as it was at our last report. The usual Mid-summer dullness was avoided by the supply houses, this year, and everything points to a record-breaking Fall business. The greatest confidence in the outlook is expressed in all quarters.

Range Boilers—Business continues brisk, good sales being made at the same figures as have been quoted for some weeks. We give prices: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The firmness of this article at the prices given before the jump in pig lead is one of the surprises of the month. Our quotations are: Discount 30 to 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—No change can be noted in the condition of the market. We give prices: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—An increasing demand is reported from all parts of the country. Prices still remain as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings—Our quotations of last week may be taken as still ruling the market. Orders of good size are being received daily. Our prices are Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—The advance in tin and pig lead has resulted in a sharp jump in the price of solder, which now stands: Bar solder, half-and-half guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, September 1, 1905.

DESPITE high prices in the metal markets, no changes have been made as yet in brass or lead goods. All lines are very firm, however, and the exceptional demand for goods all Summer has not allowed stocks to become large. While advances are expected on lead pipe and possibly on brass goods, it is unlikely that any changes will be made until the differences existing between the supply houses and master plumbers have been straightened out.

The supply houses report a record business being done, trade being far larger than at this time last year. Demand for all classes of goods is brisk.

Lead Pipe—The looked-for advance has not yet taken place. We quote as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—Demand is very keen, but supplies are plentiful We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Buying is heavy and prices continue very firm. Our quotations are as follows: Cast iron elbows tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers— The large amount of building has caused general activity in buying. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Some dealers look for an advance. Prices are firm. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Last week's prices hold firm. Our quotations are as follows: Bar solder, half and half, guaranteed. 19 1-4c.; wiping solder at 17 1-2c., and refined 17 3-4c.

Enameled Ware—Demand continues exceedingly strong for Canadian ware, but manufacturers keep well up with their shipments. Our quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50. special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet. 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

H. Norman & F. Cosette, plumbers, Ottawa, have dissolved partnership, and the business will be continued by H. Norman.

Thos. Kiddie has resigned his position as general manager of the Tyee Copper Co.'s smelting works at Ladysmith, B. C., to accept the position of general manager of the Crofton smelter. The capacity of the Crofton smelter will be increased.

DOLLARS

There is a difference between

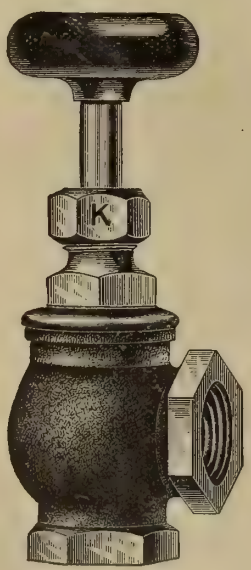
THE MERRELL NIPPLE and PIPE MILL MACHINES

Apex No. 1

Operating Side



The Threading Gauge is a feature that no other machine has; it works automatically and releases the chasers when the desired length of thread has been cut. The chasers are five in number and can be sharpened by grinding, and readily replaced by chasers cutting any style or pitch of thread. This machine has acapacity, of from ¼ to 2 inches inclusive and is especially adapted for making nipples.

PROPER VENTILATION.

VENTILATION is a term applied to the method by which a due supply of fresh air is maintained in buildings and other confined places. The word was invented about 200 years ago by Dr. Desaguliers, a well-known scientific man of that time, who devoted a great deal of time and money and skill toward improving the sanitary conditions of buildings, which at that time were considered very bad. He invented a "fanning wheel," or, in other words, an "air propellor," which was worked by manual power, and the man who worked it was called the "ventilator." The word has since been divorced from its original meaning, and is now used to signify an opening in a building through which air may, or may not, pass, according to circumstances.

Everybody knows that a fresh supply of air is necessary for all living things, even for plants and vegetation. To cover the head with a cloth for a short time produces a sense of oppression, and on its removal a feeling of relief is experienced. The heat of the person's breath causes oppression. People often say of a crowded building "it is too hot," whereas the discomfort is caused chiefly from the impurity of the atmosphere.

Dwelling houses, too, suffer from lack of proper ventilation. It has often been remarked that we are apt to prize but lightly what we possess in abundance, and it is a fact that cannot be denied that the two most important foods on which human life depends, viz., pure air and pure water, are by the great majority of us least esteemed. These two foods, more especially the former, are so abundant that we need pay very little attention to obtain them. We should recognize the importance then of supplying every building and habitual dwelling with proper ventilation. In thousands of houses in our great cities the most elementary principles of ventilation are systematically ignored.

People who would take the greatest care not to drink polluted water are yet careless of breathing impure air, and seem to forget that one may be quite as dangerous as the other—personally I am of opinion that impure air is really more dangerous than impure water, since the air is taken directly into the lungs and comes in contact with the blood more speedily than water which enters the stomach. I do not propose to write with medical authority at all, but simply from a little observation of my own. I believe that ventilation is an exact science, admitting of exact results, and everybody should be induced to believe the fact that bad air is detrimental to health.—Robert Bennett in the Canadian Architect.

PAINTING EXHAUST PIPES.

The Pacific Coast Gas Association recommends the following paints as being able to withstand anything up to a red heat: Lampblack, 3 pounds, graphite, 3 pounds; black oxide of manganese, 1 pound; Japan gold size, 1 pint; turpentine, 1.5 pints, and boiled linseed oil, 1 pint. Powder the graphite and mix all the ingredients to a uniform consistency. Give two coats. Or, black oxide of manganese, 2 pounds; graphite 3 pounds, and terra alba, 9 pounds. Mix and pass through a fine sieve, then mix to required consistency with the following compound: Sodium silicate, 10 parts; glucose, 1 part, and water, 4 parts.

AN IMPROVED PIPE WRENCH.

AN improved pipe wrench has recently been invented, which may be quickly adjusted to take various sizes of pipes or nuts, and which will act with a maximum of power without unduly mutilating or marring the article gripped. Furthermore, the gripping jaws will be readily disengaged from the article when pressure is released from the handle.

A portion of the handle terminates in a Y-shaped jaw, in which a serrated steel piece is set. A yoke strap on the handle carries a pawl which engages teeth formed in the upper edge of the handle. The strap also carries a pair of arms, which at their outer ends are pivoted to the rear yoke head. The latter is connected by two links with the forward yoke head, which at its lower end carries a jaw pivoted thereto. In use, to adjust the wrench to any desired article, the pawl is lifted by depressing the end, then the jaws are moved against the article. On releasing the pawl the spring presses it into engagement with the teeth on lever. Then, when the lever is moved, the jaws are brought together with a powerful gripping action, due to the leverage of the yoke heads and links. The wrench has a wide range of adjustment, which is limited only by the stops coming in contact with the yoke strap. The inventor is Mr. Patrick F. Duross, of 57 North Pierce street, Flushing, New York.

DRYING BY FAN BLOWERS.

The necessity of ample air and good circulation in drying is emphasized by the following statement made at a recent meeting of the American Society of Heating and Ventilating Engineers: "The philosophy of drying or evaporating moisture by heating air rests upon the fact that the capacity of air for moisture is rapidly increased by rise in temperature. If air at 52 degrees is heated to 72 degrees its capacity for moisture is doubled and is four times what it was at 32 degrees. For each 15 pounds of water required to be evaporated per hour in a drying room 1 horsepower of boiler, 130 square feet of steam pipe and 14,000 cubic feet of air are required under good conditions." Although 20 years ago Baldwin, in his book "Steam Heating for Buildings," stated that "it is not profitable to dry by forcing air, as with a fan or blower, in connection with steam coils," it is true that since then drying by fan blowers has practically superseded all other methods.

PLUMBING GOSSIP.

A system of sewers and electric lighting is being installed at Indian Head at an estimated expenditure of $150,000. The electric lighting is to be in operation this Fall, and it is expected that the sewer system will be ready next Spring.

James Ballantyne expects to commence work at once on his new plumbing plant and warehouse in the western part of Winnipeg.

POCKET TOOL KIT.

ADOLPH KASTOR & BROS., 109 Duane street, New York, are marketing the A. K. & B. interchangeable tool kit here shown. The combination includes a wide range of handy tools for individual and amateur use, not only about home and civilization, but in the woods, camping, shooting or other outings, automobiling, cycling or wherever a person, lay or professional, requires any one of a well assorted number of practical, serviceable

Interchangeable Tool Kit.

tools. The knife, which is the foundation of the set, has a stout blade in one end and is fitted at the opposite end to receive any of the various tools. The knife closed is $3\frac{3}{4}$ inches long and its greatest thickness is $\frac{5}{8}$ inch. It has wood scales, brass rivets, strong German silver bolsters and is iron lined. At the tool end is a strong steel rivet for engaging the tang of the various tools, which are sufficiently large to be of practical use, while the ample knife stock furnishes necessary purchase and leverage. When using a tool the slot in the tang is hooked into the end of the knife in a partially closed position, when by forcing backward as a knife blade is opened the pressure of the strong steel back spring keeps the tool rigidly in place. The case is of substantial russet leather and when folded is held together by two enamelled spring glove buttons. Its dimensions are $4\frac{1}{4}$ x $4\frac{1}{4}$ inches, the thickness varying from $\frac{1}{2}$ to 1 inch. The tools are said to be made of best English steel, hand forged, full polished, and are guaranteed. Besides the knife there is a double cut $3\frac{1}{2}$-inch file, with four filing surfaces, as well as a $\frac{3}{8}$-inch screw driver blade at the end. Then a tack hammer, with $\frac{5}{8}$-inch face and tack claw; can opener, $3\frac{1}{2}$-inch saw, sheathed in a graduated metallic rule case; reamer, awl and scrube, $\frac{1}{2}$-inch wood chisel, screw driver, 3-16-inch blade at point, and $\frac{1}{8}$-inch gimlet. When the file screw driver blade is in position ready for use the tool is 7 inches long over all, and the others are in proportion. Each kit is neatly packed in a telescope paper box, $4\frac{1}{2}$ x $4\frac{1}{2}$ x $1\frac{1}{4}$ inches.

TAP AND DIE GRINDER.

A RECENT product of the works of the Greenfield Machine Co., Greenfield, Mass., is a tap and die grinder embodying new features. The tap-sharpening attachment consists of two centreheads mounted on a swinging arm, which carries the tap across the face of the cup emery wheel. The arm swings at an angle with the face of the wheel, permitting the tap to be ground at any angle. The tap is indexed by means of a rigid tooth rest and held in place on centres, one of which is attached to a spring lever, allowing the tap to be removed quickly. Means are provided for holding a tap, which has the end broken off, or one without centre holes as shown in cut below. The work is brought towards the wheel by means of the hand wheel at the front of the machine. Chucking reamers can also be ground on this fixture. Will hold from $\frac{3}{8}$-inch hand taps to $1\frac{1}{4}$-inch machine taps.

NOVEL USE FOR WIRE FENCING.

Wire netting in Australia answers a purpose which, fortunately, it is rarely called upon to serve in this Canada of ours. The rabbit has become such a pest in that colony that pastoralists and other farmers have been put to great expense in order to keep these vermin away from their properties. It is said that millions of miles of wire netting have been constructed, in the agricultural districts, and as each mile costs about £35, it will be seen that the situation is indeed a serious one. Experience is teaching that even after this extraordinary expenditure, the young rabbits come through the larger meshes, with ease, and it has been found necessary to adopt a mesh not larger than one and one-quarter inch in order to insure satisfactory results.

DEATH OF DAVID W. McLAREN.

One of the most popular business men in Montreal passed away last Friday when Mr. David W. McLaren, head of the J. C. McLaren Belting Co., succumbed to a brief illness at his residence on Dorchester street. He was the only son of the late J. C. McLaren, and was 43 years of age, being a native of Montreal. Since his father's death he has conducted the business with the utmost skill and prudence, and he has always enjoyed an enviable reputation in the business world.

The late Mr. McLaren was also widely known in the city as a liberal contributor to charitable purposes, and throughout his life he was known as a man of exceptionally wide views. The funeral, which was private, took place to Mount Royal Cemetery last Monday afternoon.

The last of the new spans of the steel viaduct (No. 3) over the Don east of Leaside on the C.P.R., have been put in. As soon as this one is completely finished, work will be started on viaduct No. 4.

OXFORD BOILERS and RADIATORS
SUPPLY
A PERFECT HEATING SYSTEM

Superior Construction The heating capacity of the OXFORD HOT WATER AND STEAM BOILER is greatly enhanced by the improved construction of the Fire-pot, whose upper walls overhang the fire and give a maximum heating capacity and proportionate saving of fuel.

The Hollow Triangular Grate Appeals to users as its form gives an ample air space and makes it easy to operate. The ash-pan is exceedingly commodious. Any grate bar can be taken out through the ash-pit door by removing two outside screws.

Iron to Iron Connections The iron to iron push nipple connections which are used throughout obviate the use of washers or gaskets, a fact which will appeal to you as of great practical value.

OXFORD HOT WATER and STEAM RADIATORS

are built of cast iron, are rust-proof and, used with OXFORD BOILERS, form a complete, durable and efficient heating system.

They Cannot Leak No gaskets or washers are used, but all connections of radiator loops are metal to metal, made with the Oxford Steel Push Nipple, which will not loosen or wear out.

The OXFORD gives the highest degree of radiated heat and distributes it evenly in all parts of the building.

Send for handsomely illustrated catalogue which tells the whole story.

Williamson, Diamond Flint Glass Co., Limited.

NATIONAL CONSTRUCTION CO.

THE National Construction Co., who, according to current report, are to build the western division of the new transcontinental railway from Winnipeg to the Pacific Coast, were incorporated at Ottawa in November last, with authority to carry on a general contracting and construction business throughout Canada. The capital stock was placed at $250,000, divided into $100 shares. The incorporators were Messrs. Joseph Hobson, chief engineer of the Grand Trunk Railway; Robert S. Logan, general manager of the Grand Trunk Pacific Railway; Henry W. Walker, general auditor of the Grand Trunk Railway; Frank Scott and Henry Phillips, all of Montreal.

HARDWARE MEN:—Our

STEEL WATER TROUGH

is a seller—something the average farmer has been waiting for,

We assist the trade by way of generous supply of literature, besides which we are advertising in the farm mediums.

We will make you an interesting proposition; so write us at once that you are open to consider the agency in your district. We appoint one representative only in all medium size towns.

It's worth having, believe us, so write for it to-day. **STEEL TROUGH & MACHINE Co.** *TWEED, Ontario* Limited

THE BANNER COLD BLAST LANTERN

ALWAYS LEADS GREAT LIGHT WIND PROOF.

CURRENT MARKET QUOTATIONS.

Sept. 1, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

"Open Ring" Pattern

Niagara Cow Ties

Possess certain obvious advantages which have brought them into exclusive use throughout all the great dairying sections in Canada and the United States. We have made these Cow Ties for many Fancy Dairies in the past, and they have now become a regular item of the Hardware Dealers' Stock.

The SWIVEL is malleable and is muchstronger than any Steel Swivel, while its action is so free that it never sticks on account of rust.

The TOGGLES used on our Cow Ties are forged from BESSEMER STEEL, by a patented process.

The TOGGLES are so arranged as to always hang at right angles to the Chain, which prevents their becoming unfastened from same.

In a crowded stable this method of fastening confines the animal more and obviates all danger of being stepped upon when lying down.

Modern Retail Hardware Methods

have reached such a high place, that no dealer can afford to run any risks. He can afford to sell nothing but the best goods to his best customers.

We illustrate this week a few of "Hurd's" Axes and Hatchets; the quality and finish of which cannot be surpassed by any in America.

The name "Hurd's" is a guarantee of quality, and, what's more, we sell them at a price that ma es them popular.

We want you to stand right behind "Hurd's Goods," and remember that we stand right behind you.

By this we do not mean that we warrant "Hurd's Chopping Axes," as the price we charge will not stand it; but we guarantee them to be the best axes sold in Canada.

We do warrant "Hurd's Bench Axes" and "Hatchets," and will replace any defective ones free of charge.

Axes, made in Michigan, Dayton, Three Rivers, wedge and half-wedge patterns, in polished solid steel, bronze and charcoal finish.

Bench Axes, extra full weight, crucible cast steel bit, polished and bronzed.

WHY DILLON STAYS STAY

When the temper of a stay is too high it is affected by wrapping, yet many wire fences are made with "high-temper" stays on the fallacy of "greater strength." When such stays are weighted down, say, between posts, there is a friction that does not stop at bending. It stops at nothing short of a break. You never heard of a break in a **DILLON HINGE-STAY** and never will. See the cut. "Dillon" stays are of Medium Temper, and are hinged, which ensures absolute elasticity as well as strength, therefore, will neither bend nor break. All other stays are now gauged by "Dillon" stays. Pretty good proof this of "Dillon" superiority—good enough proof for any Hardwareman or farmer either.

CANADIAN MANUFACTURERS IN ENGLAND

By W. L. E.

CANADA'S OPPORTUNITIES IN GREAT BRITAIN AND FRANCE

ONE thing that impressed me a great deal while in Great Britain with the Canadian Manufacturers' Association was the unique position that Canada at present occupies in both Great Britain and France. To both countries Canada is attached by the ties of kindredship. In Great Britain they refer to Canadians as brothers; in France as confreres. Great Britain welcomed us with open arms, and entertained us for about four weeks in a most lavish manner. In France our official visit was confined to four or five days. The possibilities of entertainment were, in consequence, more limited than in England. But

President George on deck.

the welcome was none the less cordial. During the four or five days they provided all the entertainment and pleasure that we were capable of digesting. And running through the public and private remarks of business and public men of France with whom we were brought in contact were sentiments warmer and deeper thon we dreamed of. In Great Britain sympathy toward Canada is based on what we are politically in relation to the Motherland; in France on what Canada once was politically in relation to that country. Then on the top of it all is the entente cordiale between Great Britain and France.

Naturally, in view of the sentimental relationship between Canada and Great Britain and France, the conditions are happy for the extension of trade between

In this group will be seen Messrs. T. H. Estabrooks and R. D. Emmerson, St. John, N.B., Mr. H. P. Allen, London, Ont., J. W. Scott, Mount Forest, and P. Clarkson, Montreal

these two countries and the Dominion. Wherever we went in Great Britain or in France evidences of an interest in Canadian trade matters were to be seen. Naturally, their first thought was Canada as a customer; but there was also expressed a pronounced desire to purchase Canadian products.

* * *

Travel the wide world over and I do not believe there is any country in the world whose prospects for increased

In this group can be seen Messrs. J. P. Steedman and G. W. Sweet, Hamilton, E. J. Davis, Toronto, C. D. McAlpine, Halifax. Mr. W. W. Thompson, London, is showing his back.

trade with other countries are as bright as those of Canada with Great Britain and France. In other words Canada is in the position of having customers abroad who are actually desirous of giving her products a preference as long as quality and price — and particularly quality—are right.

* * *

Under these circumstances it is obviously the fault of Canadians themselves if the opportunity offered is not grasped. It is true our export trade with what might be termed Canada's two mother countries has grown rapidly during the last ten years, that with Great Britain showing an increase of over 70 per cent. and that with France about 90 per cent.; but the difference between what these countries buy and what we can sell them is very great. What we supply is merely a "drop in the bucket."

Messrs. Allan and E. J. Davis, Toronto, and R. D. Macdonald, London.

Canadians are by no means unaggressive; but it dawned upon most of us while abroad that there was room for more aggressiveness. The field is there. What it wants is cultivation. The quality of the merchandise we send across the ocean is not always as uniform as the tastes of the people demand, and particularly those of the British people. Possibly there are some who may be inclined to pooh-pooh this idea. But seeing is believing. And some of us saw and believed. Then there must be promptness in filling orders and in answering correspondence. There is sometimes good and sufficient reason for not being able to promptly fill orders; but there is

no excuse for neglect in answering correspondence. It causes irritation, and irritation is not good for business. We often hear complaints on this side of the Atlantic in regard to the disinclination of manufacturer in Great Britain to adapt themselves to the requirements of the Canadian market. One of the complaints of importers in Great Britain against some of the manufacturers in Canada is of a similar character. I know of the representative in London of one large Canadian concern who is taking a trip to Canada nearly altogether for the purpose of trying to instruct his principals in ways and means of meeting the requirements of the British trade. Another has but recently returned to Great Britain from a similar mission. If those in Canada who are unconcerned about such matters were conscious of the concern a great many people in Great Britain have who wish to see the development of trade between the Mother Country and her colonies, they would awake to their duty in the matter.

* * *

One of the first things Canadians should do who desire to do business with Great Britain, or who are ambitious to do more with that country than they are now doing, is to make a journey there. Get into touch with the men with whom they want to do business, listen to their suggestions and learn from personal contact and observation what the actual requirements of the market are. It is only by this way they can become cognizant of the actual situation. They can never learn by correspondence or through other persons. They must see and learn for themselves; and it is the easiest and cheapest way in the long run. Their ways are not our ways any more than ours are theirs. And with customers so promising it is folly indeed not to learn how we can best please them.

PARCELS POST PROPOSITION PUNCTURED

Address by National President W. P. Bogardus, Before the Michigan Retail Hardware Association Convention.

THERE is perhaps no question so vital to the retail trade, no matter what line it may be, as the question of post parcels, a question whose ramifications reach out to all lines of trade and affect all kinds of retailers; and it is one of the questions that will not be settled until it is settled right.

Theoretical post parcels is a dream of certain theorists who look on the Government as a power organized for their protection and upbuilding, a power whose duty it is to care for their individual welfare and success, forgetting that the Government under which we live is a political Government devoted solely to the advancement of our political interests; not in any way a business Government established for the purpose of making money, but established for the purpose of protecting the political rights of the people, such as life, liberty and the pursuits of happiness. To take any other position means that we depend on our Government to help us make a living. Some may say that we do this when we ask for a tariff. But that is hardly fair, for tariffs are made for the country and not for individuals; for the development of industries that will add to our population by increasing the opportunities for work, stimulating immigration, that our land may be tilled, our factories may resound with the busy hum of whirling wheels, our mines yield their wealth and the white wings of our commerce dot every sea.

It is argued by some that the parcels post is for the greatest good of the greatest number; that the consumers will receive the benefit, and as they are the largest majority therefore the enlarged post parcels will be a national benefit. In the development of this idea it is proposed that all the needs of the consumer shall be supplied by transportation facilities furnished by the Government, and so there will be no need of express service or other private means of transportation, for the Government will assume the transportation of all goods and will take care of all of the commerce of the country.

A New Scheme.

The new scheme suggested by the postal reformers is under the plea that it is a movement of the Manufacturers' Association of New York. In the furtherance of this project there has been issued and sent broadcast over the country a little folder, sometimes blue and sometimes green, purporting to come from the Manufacturers' Association of New York (who these manufacturers are or who are the officers of the association is not stated) urging those who receive the folder to sign their names to a portion of the folder and send it to their Congressmen, and this is what they want sent:

"1. Letters and sealed packages at 1 cent. per ounce or fraction.

"2. All mailable matter at a rate high enough to direct the large bulk of merchandise to natural channels of distribution, but low enough to serve the useful purpose of a parcels post."

In 1904 a measure was introduced in Congress by the postal reformers proposing to carry a pound for a nickel and 11 pounds for a quarter, and in favoring this law they argued as follows: "To the American to-day the most important department of public intelligence is the advertising department. . . . The cent a pound publishers' post makes this news available. Any attack on this service is an attack on every business advertiser in the publishers' columns. The Postmaster-General's proposed increase from 1 to 4 cents per pound in the tax on the circulation of the magazine press would not only do a grievous wrong to the publishers and to the reading public; it would seriously damage the business interests of the country."

This year in arguing for the two rates of postage, they say: "The products of industry and agriculture follow the natural channels of distribution via the transportation lines to wholesaler and retailer. There is one exception. The publishers of second-class matter have a special channel of distribution direct to consumer, provided by Congress—namely, the United States mail. Their product is taken in bulk, without stamps, at 1 cent per pound, while the product of every other industry is compelled to pay 16 cents per pound and stamp each package. The result is that 67 per cent. of the total matter carried is of the second class, which produces less than 4 per cent. of the total revenue. The subsidy to publishers in second-class mail rates precludes the press from printing these facts."

Last year it would be a grievous wrong to increase the tax to the publishers. This year they demand equitable laws that will do away with "the waste and abuse" that prevails "under the laws now operative."

Printed Matter Not Merchandise.

To refer to class magazines and newspapers as mere merchandise is neither fair nor true. The standing of our country among the nations of the world is largely due to the facilities we have enjoyed to gain knowledge and information by the almost universal distribution of the newspaper and magazine that comes daily, weekly and monthly to our homes.

Proposed Plan is Unreasonable.

With one cent postage on letters and only one other class of mail matter, our mails would be burdened with such an amount at so unprofitable rates as to seriously cripple the entire system. Besides there is no equity in sending merchandise a long and short distance at the same price. It costs more to send merchandise a thousand miles than it costs to send it one. Now if that is true then the act of the Government carrying any merchandise in the mails is radically wrong. It is not fair to charge no more for a long haul than for a short one, for the long haul gets transportation for less than it is worth. It is not just to the short haul to pay as much as for the long haul, for then the charge is excessive. It is not equity for an average to be struck between the cost of the long and short hauls, for then some are favored at the expense of the others. To carry out the proposed modification of the postal laws would result in throwing the large majority of retail trade to the large cities. But, says the advocate of the new ways: "See what low prices the consumer will get." Is it always profitable for the consumer to get the lowest prices? Does not the consumer pay too much, no matter what the price, when he destroys his home market? Does the consumer gain anything when he sends his money away

Prompt Shipment

The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

from home; when he has no selection of the goods he buys; when he has to take what is sent him whether it pleases him or not? When he contributes to the wealth of great city stores, who never in any way help him to bear the burden of his taxes, who are interested in none of his home improvements; who add in no way to the tax duplicate of his community, who never buy any of his products, and so keep the money he has paid out in circulation in the community where he lives, but are ever a drain on his resources. Do you say that the low prices given the consumer compensate for all these drawbacks? Will the enlarged post parcels be a good thing for this country if the results follow as they have followed in other countries where it has been thoroughly tried in the concentration of business in the large cities? Is there any business sense in the Government undertaking to carry merchandise at five cents per pound through the mails when it costs sixteen cents per pound for transportation and the other necessary expenses for handling? Can we endorse any line of action on the part of the Government that looks to its entering into active competition with the citizens in business enterprises?

Post parcels is a delusion, the scheme of radical men who look to countries governed by monarchs and kings for their inspiration, and who are willing to have our Government supply our wants and minister to our comfort. It is not favor that we want but a fair chance to earn an honest living in competition with our fellows.

STEEL BARRELS FOR SHIPPERS.

The Chicago Hardware Foundry Co., North Chicago, Ill., is shipping its small castings in steel barrels weighing 48 pounds empty, and the company is given a very favorable return freight rate on empty barrels. When a barrelful of castings is shipped it is locked and the consignee is sent a key for unlocking. A tally of the contents of each barrel is chalked on the under side of the hinged lid for convenience in checking invoices. The shippers inform us that the system, while involving some expense at the outset, is economical in the long run, as it prevents many claims for shortage in count and also preserves the castings from damage in shipment. The barrels used by the company are furnished by the Cleveland Wire Spring Co., Cleveland, Ohio.

INCREASE IN CARRYING CAPACITY

Canadian Pacific Railway officials announce that the contract for double tracking the road from Fort William to Winnipeg has been let to Foley Bros., who will commence work immediately near Kenora, Ont.

As a result of this double tracking, and the reduction of the maximum grade to four-tenths of one per cent. for both east and west-bound traffic, it is stated that no less than thirty per cent. will be added to the hauling power of every locomotive on that section of the road.

It is estimated that about forty miles out of the entire distance of 427 miles will have to be completely diverted, and a new roadbed built. Three tunnels will be enlarged to accommodate the two tracks, and, between Eagle River and Telford, a good part of the road will have to be cut out of the rock.

This is a very expensive undertaking, and one of great difficulty, but it is necessary to increase the carrying capacity of the Canadian Pacific, from Lake Superior to the wheat fields of the west.

EVADING QUEBEC TAX.

MONTREAL customs officers are authority for the statement that the law recently passed by the Quebec Government imposing a tax of $300 on foreign commercial travelers doing business in Quebec is driving away much business that formerly was transacted in Montreal and other cities and towns throughout the Province.

Representatives of European and United States houses object to pay such a high fee, and various methods of evading the law have been devised. The customs officers have discovered that considerable business with Montreal houses is being done at Ottawa. The scheme that has been extensively adopted is for travelers to take quarters in Ottawa and invite Montreal merchants to take a free trip to the capital as their guests. This generous invitation is accepted, and the Montreal man gets a pleasant and at the same time profitable outing. The Ottawa hotel gets the extra patronage. The railways get the same fare as if the traveler went to Montreal. The traveler in fact may pay a little more for the merchant's ticket than he would for his own, but he saves the freight on his samples. The Ottawa cabman drives them around instead of the Montreal cabman and Ottawa's charms are viewed and advertised instead of Montreal's. This is made possible on account of there being no tax on travelers in the neighboring Province.

Again, foreign firms rent small offices in Montreal in which their representatives display their goods, and, having such local offices, they are exempt from the special tax.

A HARDWAREMAN'S JOKE.

An elderly man who poses as one of the best hardwaremen of Western Canada, was recently accosted in a Vancouver store by a young maiden of about twenty summers, who wanted to purchase a coat hanger. After she had made her request known to him, he drew himself up to the full height of his stature and importance, and with a solemn shake of the head, said in deep, sonorous tones: "No, ma'am, I am sorry we have none, but here are some fine pant hangers."

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

National Stoves and Ranges.

MOFFAT STOVE CO., Weston, Ont. have just received their annual catalogue No. 12, from the printers. The volume comprises 80 pages and cover, also including a copy of the guarantee given to every purchaser of stoves and ranges made by the Moffat Co. The book is an interesting one and should be in the hands of all stove dealers. Mention Hardware and Metal when writing.

Fire Arms Card.

Purvis Bros., Sudbury, are enclosing in their letters a neat card announcing the prices on a special importation of guns, rifles, revolvers and ammunition. The idea is up-to-date and should be a business getter.

Page Woven Wire Fence.

Wire fencing is neatly illustrated and well described in two booklets being supplied the trade by the Page Wire Fence Co., Limited, Walkerville, Ont. All classes of goods are dealt with and prices are given. Mention Hardware and Metal when sending for copies.

Camp Steel Ranges.

"Walker" camp steel ranges for lumber, railway and construction camps, hotels, boarding and farm houses, are illustrated and written up in a folder just sent us by the company. Prices are given on the various styles. Other advertising matter is included, describing the "Walker Star," a small steel range; the "Walker Pilot Steel Range," etc. Stove dealers desiring to get in touch with these lines should mention Hardware and Metal when writing.

BUSINESS CHANGES.

Ontario.

McLean & Tupling, blacksmiths, Southampton, have assigned to G. E. Smith, and a meeting of creditors will be held Sept. 12th.

Quebec.

The assets of L. Monarque, harness maker, Montreal, have been sold.

J. H. Blais, tinsmith, Napierville, has assigned. Is offering to compromise.

H. A. Depocas has been appointed curator to J. E. Gratton, plumber and roofer, Montreal.

Nova Scotia.

E. Archibald, harness dealer, Truro, has assigned.

Manitoba and N.W.T.

Howard & Snow, painters, Battleford, have moved to North Battleford.

A. L. Legarce, hardware merchant, Duck Lake, has advertised his stock to be sold by Sept. 12.

The stock of J. A. Stovel, hardware merchant, Edmonton, has been advertised for sale by tender up to Sept. 21.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

912. A Manchester firm would be glad to obtain Canadian quotations c.i.f. Manchester, for ash turned for hockey blades, sizes 19 1-2 inches by 2 1-4 inches by 2 inches.

920. A Lancashire manufacturer of tinned and lead coated sheets wishes to extend his trade to Canada, and would gladly correspond with Canadian users of same.

928. A firm in a position to export in a large way such goods as bronze powders, barytes, china clay, dry color, French chalk, ochres, siennas, oxides and other chemicals, desires to correspond with buyers in Canada.

929. A Nelson (New Zealand) commission and general merchant desires to get into touch with Canadian manufacturers of furniture, stoves, curtains, sewing machines, hollow-ware, bicycles, etc.

NEW USE FOR METAL.

One of the uses of expanded steel lathing which, although practised in the United States for the past twelve years, has not been generally introduced into Canada, came before our notice this week. The Order of Sulpicians, who have charge of the administration of Notre Dame church, have been compelled to renew their cement pavement (which is about 100 feet long by 50 feet wide), in front of the church, owing to the extreme action of the frost, cracking the surface. In relaying this pavement they have introduced the expanded metal, as a bond which is expected to prevent any cracking in the future. The experiment was tried some three years ago on cement and concrete walks in the town of Westmount, and it has been very satisfactory, the sidewalks which were treated being themselves evidence of the substantial qualities attained by the introduction of the steel mesh.

CARBORUNDUM EXHIBIT.

An interesting exhibit and demonstration of the specialties made from carborundum was one of the features of the past two weeks at Messrs. Rice Lewis & Sons, Toronto, who are agents for both carborundum wheels and specialties in Canada. The wheels are now well known to the machinery and hardware trade throughout America, but it is only recently that the small stones for sharpening tools, knives, razors, etc., have been pushed before the attention of the trade.

Mr. Ernest W. Taylor, New York representative of the Carborundum Company, Niagara Falls, has been at Rice Lewis' during the past fortnight distributing samples of carborundum on paper and in small stones and demonstrating the powerful sharpening qualities of the stones by sharpening the dullest knife in a few seconds.

The Rice Lewis Company reports a very large sale of carborundum wheels.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

CANADIAN-BUILT locomotives are being purchared by the Grand Trunk Railway for its Canadian lines. The road has recently added to its equipment on the western Ontario lines 15 ten-wheel passenger engines and ten compound Mogul locomotives for freight service. These have been built and delivered by the Locomotive and Machine Company of Montreal. Still another 15 Mogul locomotives have been constructed and handed over by the Kingston Locomotive Works. It is the policy of the Grand Trunk's present management to use only Canadian-built engines on its Canadian lines. These are declared by W. Kennedy, mechanical superintendent of the road, to be carefully and strongly constructed, and to be admirably adapted for service on roads in the Dominion.

The Brantford Electric & Operating Company are installing a new steam plant.

The Dominion Copper Co. expect to build a new smelter in the Boundary district in British Columbia.

The Pittsburg Coal Company's new docks at Port Arthur are to have a capacity of over 1,000,000 tons.

The works of the Canada Saw Works at Ottawa have been closed and the plant and machinery will be removed to Montreal.

The American Radiator Company has placed $45,000 insurance on the Cockshutt buildings being bought by them at Brantford.

It is stated that the Grand Trunk have plans prepared for improving traffic facilities at London, which will mean the expenditure of $2,000,000.

Seattle capitalists propose to build two large sawmills on the west coast of Vancouver Island, one at Mosquito Harbor, Clayoquot Sound, and the other at Nootka Sound.

King Bros., Ltd., tanners, Whitby, are enlarging their works by the erection of a large leech house, 60x75 feet and three stories high. Much new mgchinery is also being installed.

The Colonial Portable House Company, Ltd., has been formed at Vancouver, capitalized at $10,000, to manufacture portable houses patented by Archibald Rowan, Vancouver.

The Western Electric Co. proposes to erect a factory 50x200 feet at Waterloo if the town guarantees their bonds for $16,000 for 20 years. Electric meters and trunk finishings will be manufactured.

Six carloads of bridge material are being forwarded from Amberg, Pa., via Vancouver, to Dawson for the construction of the Klondyke Mines Railway bridge across the Klondyke river at Dawson.

The Dominion Government has received a reply from the Imperial authorities in answer to the request to remove the embargo on Canadian cattle. The British Government, on a report of the British Board of Agriculture, has declined to do so.

The Hydro-Electric Commission, which is composed of Hon. Mr. Beck and Messrs. P. W. Ellis and George Pattinson, M.P.P., has handed in its report to the Government on the application of the municipality of Kenora to utilize the water-power of the vicinity.

Mr. D. H. Ross, Canadian agent in Melbourne, has cabled to the Department of Trade and Commerce that the Commonwealth Government had decided to re-enact the law adding the inland freight charges on goods from Canada and the United States to all invoices of shipments destined for Australia.

The Nova Scotia Steel & Coal Co. has just made a large contract with the Montreal Sugar Refinery for 25,000 tons of picked coal as a first instalment. The company expects to be raising coal at the new colliery in a few weeks. It is expected that the company's total output for 1905 will be the largest in its history.

A congratulatory banquet will be tendered President W. K. George, of the Canadian Manufacturers' Association, by the Montreal braoch of the association, on the evening of Saturday, Sept. 16th next, in recognition of the way in which he presented the views of the Canadian manufacturers during the recent British tour of that body.

The London Tool Company have awarded the contract for the framework of their new building, but whether it will be built in London or Hamilton remains to be determined. The framework is of steel, and may, of course, be placed anywhere. It will have dimensions of 110 feet by over 300 feet, so that the importance of the works may be readily estimated.

The Plymouth Cordage Co. are preparing to erect their plant for the manufacture of binder twine at Welland, Ont. Building operations will be commenced in the Fall. The plant will employ 500 men, and Frank Holmes, assistant treasuerer of the company, will be Canadian manager. The company have already contracted with one of the power companies for 1,200 h.p. The American plant of the firm is at North Plymouth, Mass.

The Westinghouse interests have bought a site on the Niagara frontier, on which they will build a great plant for the manufacture of electrical machinery. The site selected is on the Niagara gorge, below Niagara Falls, on a table land near the historic Devil's Hole. The Ontario Power Company's transmission line crosses the Niagara river at that point. The power company is said to be associated with the Westinghouse people in the deal.

According to a Pittsburg report, the billion-dollar steel trust has obtained possession of a club that will be of great assistance to beat competitors in the armor plate business into submis-

sion. Andrew F. Mitchell, employed in the armor plate department of the Carnegie Steel Co., Homestead, has been granted a patent on an improved process for armor plate manufacture. The principal cost in making armor plate is in heating the billets for pressure into shapes, and the annealing and carburizing. By the Mitchell process the cost of manufacture is said to have been reduced 50 per cent., while the plates are stronger and can more readily be machined, after being annealed and carburized. The trust will exploit the patent and the independents are described as being uneasy at the turn of affairs.

Companies Incorporated.

Builders' Equipment Co., Ltd., Winnipeg, share capital $120,000., The directors are A. Macaw, A. L. Bredin, L. C. Hazlett, J. A. Tanner and W. J. Cummings, all of Winnipeg.

The Jones & Moore Electric Co., Ltd. Winnipeg, share capital $75,000. The directors are J. W. Jones, of Toronto, and G. J. Hicks, L. M. Delbridge, J. C. Kavanagh, and C. W. Bradshaw, of Winnipeg.

Albion Stove Works, Limited, Victoria, B.C., share capital $30,000, purpose to take over the stove business of the Albion Iron Works. The provisional directors are J. A. Mara, F. S. Barnard and John Bryden, all of Victoria.

The Myres Iron Fence Co., Ltd., Winnipeg, share capital $35,000, purpose taking over the business of the Myres Fence Co. and the Canadian Implement Co. The directors are R. L. Myres, P. C. Young, W. F. Salter, T. G. Mathers, and E. Spice, all of Winnipeg.

The Improved Match Co., Ltd., Montreal, share capital $75,000, purpose to carry on a business as general merchants and manufacturers. The directors are H. D. Metcalfe, of Westmount, H. H. Snowdon, C. P. Metcalfe, C. J. Anderson, C. A. Morin, F. C. Saunders, all of Montreal.

N. J. Holden Co., Ltd., of Montreal, share capital $200,000, purpose to manufacture and deal in apparatus which may be used for or as incidental to the transportation of persons or property. The directors are L. Johnson, W. Palmer, A. L. DeGuire, P. A. Masse, and C. Bethell all of Montreal.

The E. Guillet & Sons Ltd., Marieville, Que., share capital $150,000, purpose to acquire and develop any water power in order to supply electrical power. The directors are E. Guillet, H. D. Guillet and H. W. Jewett, of Marieville, Que., J. H. McKechnie of Granby, and T. Gnaedinger, of Montreal.

The North River Power Co., Ltd., of Montreal, share capital $90,000, purpose to manufacture and deal in apparatus for the manufacture of electricity, etc., and tools, wire, lamps, etc. The directors are R. Bickerdike A. Fogarty, J. A. Mann, W. R. Stavely, all of Montreal, and H. W. Robertson, of the village of St. Andrews, Que.

The Anti-Mal-de-Mer Belt Company, Ltd., of Montreal, share capital $90,000, purpose to manufacture and deal in appliances for the prevention of seasickness, etc., and machinery, utensils, etc., pertaining thereto. The directors are C. C. Knight, E. A. Davis, E. J. Williams, G. E. Hyndman, and B. C. Howard, all of Sherbrooke, Que.

No. 20. OSHAWA, ONT. SEPT. 9, 1905

BUILDED BETTER

Builders who have been foreseeing enough to specify **Perfect Metal Lath** in their building estimates have reaped a hundredfold on their outlay by thus enhancing the property's value and lowering the insurance costs. Hardwaremen who have been foreseeing enough to know that **Perfect Metal Lath** would be bought from them or through them if they kept a stock, or kept in touch with its manufacturers, have reaped a harvest of dollars, with expenditures, minus a little persuasion, nil.

THAN THEY KNEW

So the Builders who bought **Perfect Metal Lath** at 10c. per sq. yd. and the Hardwaremen who sold it to them builded better than they knew. The one hearkened to Necessity and got Minimum Prices ; the other hearkened to Opportunity and got Maximum Profits. This story of "Buyer and Seller" success is being repeated every week, because the 10,000 sq yds. daily have to be sold. Of this huge output how much are **you** carrying, how much are you seeing sold by yonder merchant-neighbor who saw the folly of hesitating ? Or are you doing any business with our **Tile, Siding, Cornices, Store Fronts, Wall Covering,** etc., etc.? In these wares and **Perfect Metal Lath** there is **Business**—for **you** if **you seek** it.

The Pedlar People

of OSHAWA, ONT.

BUILDING AND CONSTRUCTION

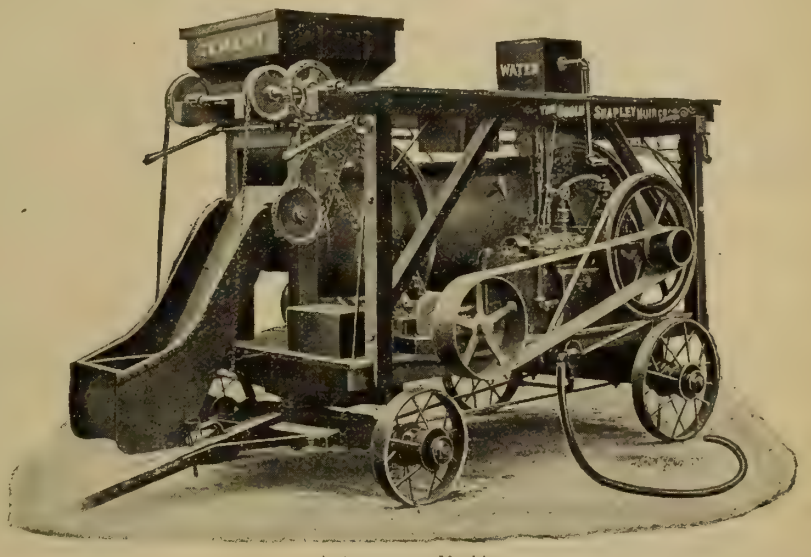
A LABOR SAVING MACHINE.

A CEMENT concrete mixer, manufactured by the Goold-Shapley & Muir Co., Limited, Brantford, is a recent development which the demand for concrete work in large quantities has made possible. The machine, as will be seen from the illustration, is mounted on a truck which contains likewise a prime mover to operate the machine, the entire apparatus being automatic. It has a capacity of mixing 75 yards of concrete per day. The gravel hopper is low down so as to be easy of access to the operator who is shovelling in the material. On top of the machine above the gravel hopper is placed another hopper which holds the cement, when the desired quantity of gravel is in the hopper for this purpose it is tripped by means of a lever and is raised up until the gravel dumps into the large main drum of the mixer and as this gravel hopper is being raised it automatically turns a cylinder which is in the bottom of the cement hopper and the cement is dumped in with the gravel into the long drum. This cylinder under the cement hopper is so arranged that it can be set to dump cement in any desired proportion from 12 to 1 to 2 to 1, and will automatically do this until the adjustment is changed making a new mixture.

The mixture is mixed dry in the revolving drum until it reaches about one-third of the length of the drum and at this point there are cups on the outside of the long drum which in revolving pass through a trough placed under the drum of the mixer and take up sufficient water which flows out into the centre of the drum to properly moisten the mixture. This water is also automatically put into the mixer by means of a stop cock being opened under the supply tank, which is also placed on top of the machine, and when the gravel hopper is elevated it opens the stop cock allowing the water to flow down from the tank into the trough below, and the quantity can be regulated at will. The water is pumped up into the tank by the engine which operates the mixer, which is a gasoline engine, also manufactured by Goold, Shapley & Muir Co., and the same pump circulates the water round the cylinder of the engine keeping it cool and the water is then delivered to the tank above. Naturally this pump forces more water into the tank than is required and an overflow back to the barrel or tank in which the water is stored is supplied, making the water supply continuous and regular.

TALL BUILDINGS.

The highest occupied structure in New York and in the world, is the Park Row building, opposite the postoffice, which has thirty-one stories, including the towers, whose crests are 390 feet from the ground. Without the towers, "under the roof," as the architects say, which is 336 feet from the ground, are twenty-eight stories with 950 office rooms. The building cost $4,000,000.



The next tallest building is that of the Commercial Cable Company. The roof is 317 feet from the ground, with twenty-one stories. The building of the National Bank of New York is 312 feet high, with twenty-two stories; the New York Times, 310 feet, with twenty-one stories; the American Surety Company building, 308 feet with twenty-one stories; the Hanover National Bank, 300 feet high, with twenty-three stories, and D. H. Burnham's Flatiron building is 300 feet high, with twenty-one stories.

BUILDING NOTES.

A $45,000 maternity hospital is being built at Edmonton.

A new English Lutheran church is to be erected at Winnipeg.

An engine house is to be erected at Pictou by the Intercolonial Railway.

A Labor-saving Machine.

A three-story brick hotel is to be erected at Fort Frances by local men.

Judge McCrimmon and W. M. Pringle are erecting new residences at Whitby.

Tenders are being called for the construction of a town hall at Arcola, Man.

New York capitalists are to build a large seven-story hotel at St. John, N. B.

Kelly, Douglas & Co., Vancouver, are to spend $75,000 on a new eight story warehouse.

Wm. Grace & Co., Winnipeg, have secured the contract to build the new town hall at St. Boniface, Man., the price being $33,801.

The Alberta Building Company has secured the contract to build the new 150,000-bushel elevator for the Calgary Milling Company.

John Crerar, of Chicago, has let the contract to F. Doherty for the erection of a business block on Simpson street, Fort William, 75x50, solid brick, two stories, and a modern building in every respect.

Ald. Edward Cook, Vancouver, is building a $30,000 warehouse on Water street in that city. Pither & Teiser, liquor wholesalers, Victoria, are also erecting a three-story warehouse in Vancouver.

The contract for the erection of a new steel business block at Forest has been awarded to C. McLean and N. McCordic. The new building will be two stories high, and will be built of cement blocks. It will be occupied by the Arcade Hardware and other stores. The cost will be about $8,000. The cement blocks will be furnished by the Forest Cement Building and Construction Co.

TORONTO'S BUILDING GROWTH.

The great increase in building operations during the past year in Toronto is shown by the following figures: Approximate value of buildings for which permits were issued Jan. 1 to Aug. 31, 1904, $4,010,613; 1905, $7,068,779. For August, 1904, $540,180; 1905, $1,417,155. Number of buildings erected Jan. 1 to Aug. 31, 1904, 1062; 1905, 2163.

CEMENT WORKS FOR CALGARY.

R. P. Butchart, managing director of the Victoria Cement Company, has decided to begin manufacturing cement at Calgary and is preparing plans for the works.

ADVICE TO YOUNG CLERKS.

ALL kinds of clerks begin well; a new broom sweeps clean. But your employer will judge you by the way you wear, not by the way you start in. Lots of good starters are poor finishers.

Be prompt. One of the first things for a man to learn if he expects to be a business man is the necessity for promptness. Tardiness may do in swell society, but it won't do in business.

There's a right way to do everything. You probably will do most things the wrong way first. When you do find out the right way, remember it.

Keep busy. As long as there is a bit of dirt in sight, you have no excuse for being idle. You have no excuse for being idle anyway. There are a thousand things to do without waiting to be told.

Don't get the notion in your head that most of the old-fashioned, fundamental rules are exploded theories, and that you have a lot of new ideas that are going to revolutionize business. Revolutions are not so easily started, and many of them end in smoke anyway.

Be a man. Now that you have started in business life, just drop out the fool boy tricks that are a nuisance to everybody but boys. Take your job seriously, but don't be gloomy and solemn.

Do little things with the same degree of care that you use in the more important things. If you have ideas, don't be afraid to suggest them to the boss, but think them over a little and weed out the nonsense first.

Find out where things are. Keep looking over the stock until you know just where to get whatever is asked for. That is one of the first ways to make yourself valuable; be able to wait on trade without keeping them waiting.

Keeping things in their places is more than necessary. It will enable the buyer to know what to buy and the seller to know what to sell. Don't leave things out of place a minute longer than is necessary.

Be affable and courteous. Be polite to the ladies and to everyone else. Don't hurry your customers. Make them feel that you have time enough to get them anything that they want and to show them goods besides.

Hand people their change or packages.

Wholesale Trade Only Supplied

Don't lay the money down somewhere in their vicinity for them to pick up.

Make your packages neat. Make them conspicuous for their neatness.

Don't you make a single sale that you are not absolutely positive you are allowed to make, and then be positive that you are right before you make it. Get into the habit of being right the first thing.

Don't be cocksure. Just make up your mind that you don't know a thing—that you probably don't even suspect anything. Few men get over the cocksure period before thirty. You might try to be an exception.

You are liable to be called to wait upon very particular people at any moment. Always appear as neat as possible to customers.

Don't wear a chip on your shoulder. A good many people will be impertinent to you, but you can't afford to resent it. Be above getting angry when customers show their ill breeding.

The proprietor wants you to draw to the store all the trade you can but that does not mean that he wants your friends to get into the habit of loafing there. Loafing is the bane of many a store. Do all you can to keep it from hurting yours.

Identify yourself with the store to the extent of keeping up the same interest in the business that you would if it were your own.

Be honest with yourself and you will be honest with everybody else. Never compromise when it is a question of honesty. Keep the difference between "yours" and "mine" firmly fixed in your mind.

Don't slouch around. Don't sit on the counters and don't act as if your backbone was rubber. Be erect and alert.

You may think that it is none of the boss's business what you do outside of store hours. You are mistaken. It is very much his business, though he probably will not say a great deal about it. The first intimation you are likely to get of his being interested will be an invitation to look for a new job.

Leave alcoholic drinks alone. A resolution to that effect admits of no possible qualification or exception.

Take pains with the children. They very soon grow up and children are most discriminating customers that come into a store. They know every time when they are treated well and they report things at home.

Your salary is small, but you aren't worth much; in fact, the boss is taking some chances in keeping you at all, and it won't be wise for you to discount your future wages. Keep down expenses and then your creditors won't be asking your employer to help them collect their bills against you.

If your boss is the right sort he will raise your wages sooner than he said he would—if you are worth the raise. Better be worth it.

When you set out to do a thing, do it! Don't be a quitter. Be thorough.

Don't hang around the door of the store, either inside or outside. Don't be a sign telling people that there's nothing doing.

Keep close watch of the advertising that the store is doing. Read it carefully and know what to expect customers so call for.

Try your own hand at ad. writing. The employe who can write ads. is always in request.

Aluminum Oil Heaters

Sales have passed the million mark. After reading the following letter you'll know why:

BUTLER AND JOHNSON

JOBBERS AND RETAILERS OF

STOVES, RANGES, FURNACES, and HOUSE FURNISHING SPECIALTIES.

SPLENDID OIL STOVES, GASOLINE STOVES, REFRIGERATORS, ICE CREAM FREEZERS, LAWN MOWERS and ALUMINUM OIL HEATERS.

229-231 E. GENESEE ST.

Syracuse, N.Y., April 11, 1905.

METAL STAMPING CO., JACKSON, MICH.

Gentlemen,—The time is approaching when we desire to line up on Oil Heaters for another season. As you are successors to the Novelty Mfg. Co., permit us to say that our records show that we have sold over 50,000 Aluminum Heaters during the last ten years, and we think your records, or rather their records, will disclose the fact that we have never returned a single Heater for repairs or otherwise.

We bring this matter to your notice as we believe we are entitled to some consideration beyond that of the average purchaser. Please weigh this matter and let your Mr. Smith come to us as early as convenient, fully equipped and prepared to close contract along these lines.

Trusting our business relations with you may continue as pleasant as they have been with your predecessors in the past, we remain,

Yours truly, BUTLER & JOHNSON.

When you sell an Aluminum Oil Heater you've made a satisfied customer.

You won't have to send a clerk out to clean and rewick it. You'll never hear from it afterwards except in words of praise.

They never come back for "repairs or otherwise." Isn't it the Oil Heater for your trade?

Put in your orders promptly. Demand is coming in in double measure right along.

METAL STAMPING CO., DEPT. 12
JACKSON, MICH., U.S.A.

W. J. McMURTRY, GALT, ONT., Canadian Agent.

STOVES AND TINWARE

THE PARLOR HEATER.

THE pleasure to be derived from a fire in the living room will continue to be enjoyed by many notwithstanding the efforts to install central heating plants in the basement to warm all the rooms in the residence. Manufacturers af fine parlor stoves are gratified with the number of orders now on their books and will be able to ship to their customers at an early date. These orders show a substantial improvement in the number of fine parlor stoves over the sales of two and three years ago. Reports are to the effect that the tendency toward the larger and more expensive base burning heaters is very marked and that cheaper stoves, instead of suffering by this change of feeling, are still in good demand. Of late years a considerable expense on the part of manufacturers has resulted in the development of some very handsome designs in parlor stoves. These stoves are not only beautifully nickel plated, but the ornamental parts are designed to harmonize with the graceful lines and character of the stove. From being a thing of stern utility in the past, the modern stove is by no means out of place in the handsomely equipped apartment. In the cold days of Winter besides the warmth afforded a good cheer is spread from the burning fire through the large mica windows now a feature of the most popular constructions. The stove dealer will increase his trade by adding these heaters to his line of samples. The proper display of them will fill his visitors with the desire of possessing them.—Metal Worker.

AN IMPROVED ASH SIFTER.

THOSE who are in habit of building their kitchen fires afresh each morning will be interested in a recently invented ash-sifting device. The device is arranged to permit of sifting the ashes without filling the surrounding air with dust. The improved sifter comprises a box consisting of the main or body and an upper auxiliary section. These sections are fitted together with a tight joint and are securely fastened with hasps and turn buttons. The upper section is provided with a hinged cover which, when closed, forms a dust-tight joint therewith. A hasp and turn button lock the cover in closed position. A handle on this cover provides means for carrying the device. Sockets are formed in the upper edge of the auxiliary section, at opposite sides, to provide bearings for a shaft. This shaft carries a tray which is rigidly attached to it. The cover of this tray consists of a screen of semi-cylindrical form. The shaft is operated by a lever thereon which carries a crank handle at one end. Normally the shaft is prevented from turning by studs at each end of the lever, engaging lugs on the outside of the upper section. In use the pan of ashes which is to be sifted is placed in the tray and the screen cover is then fastened down, also the main cover of the device. Then the lever on the shaft is pulled outward so as to clear the lugs. The handle may now be rotated to invert the tray and pan of ashes, after which it should be rocked back and forth to sift the ashes through the screen. When the screen has been sufficiently rocked, the lower section may be disengaged to permit removal of the ashes. This body section is provided with two bails which may be swung over, when the body part may be readily lifted and carried in one hand. Legs are formed on the bottom of this section to space it from the floor and thus prevent scorching the floor or carpet when hot ashes are sifted. A patent on this ash sifter has recently been granted to Mr. Eugene A. Bagby, Bowling Green, Ky.

A DEAD INDUSTRY.

PEWTERERS no longer flourish, says the Washington (D.C.) Post. Vessels of pewter, in fact, are now mainly prized as antiques, and are little used because of the fear that food placed in them may take on a poisonous character. Yet there are still a few pewterers.

They are mainly native Germans. If they make platters and the like it must be in response to a demand for counterfeit antiques, and they are otherwise chiefly employed in casting tops for drinking vessels.

Most persons think of the warming pan as a forgotten utensil superseded by the rubber bag, but some old-fashioned folk still use the warming pan, and it is made of pewter. You may have a German pewterer make you a warming pan to hold a quart of hot water for $5, and it will outlast a dozen rubber bags. The pewter warming pan is the smoothest, neatest thing imaginable, with a double stopper, also of pewter, and thickness enough to insure its durability.

The main business of the modern pewterer is to make tops for beer mugs, pitchers, molasses jugs, and the like. His utensils are many curious molds of hard wood, smoothing tools of various forms, a bucket furnace, and a suitable cupel for holding the molten metal.

As to the metal itself, it comes in sheets of moderate thickness, which the pewterer chops up into scraps when he is ready to melt and mold his metal. Pewter melts at a relatively high temperature and cools rapidly, so that the pewterer's work is done with great expedition.

He will make you a plain top for your beer mug for 30 or 40 cents, and an ornamental top for 75 cents or $1. The molds are of many shapes and sizes, and when you have a mug to be capped you may pick and choose among them until you get a design to your taste. If you wish your name cut in the lid the pewterer will do it for you for a small additional charge.

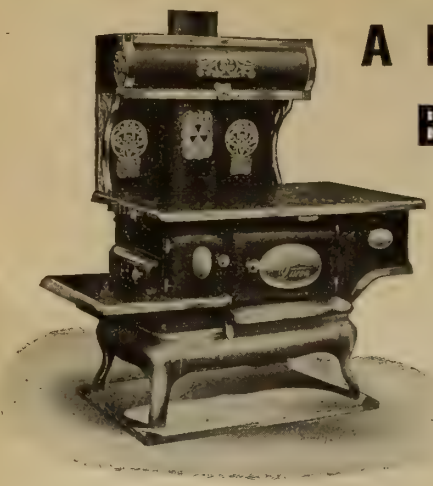
Wise Germans, who keep their own mugs at their favorite saloons, go to the pewterer for lids, for every now and then some fellow-drinker who notes that his table mate has an uncovered mug comes the old student trick of capping it with the bottom of his own mug, which entitles the whole company to have their mugs filled at the expense of him whose mug is without a lid. If you will drink beer with your cronies it is well to make terms with the pewterer and contribute something to the maintenance of a dying trade.

STANDARDS OF TIN PLATE.

A SUGGESTION made by Mr. W. A. Fingles at the recent convention of the National Association of Master Steel Metal Workers at Milwaukee was that the manufacturers make four different kinds of tin plate instead of the large number of varieties now produced. Mr. Fingles said:

"The selecting of tin plate could be very much simplified if makers would adopt varieties as follows: 8, 15, 25 and 40 pounds of coating on sheet plates and 15, 25 and 40 pounds of coating on charcoal iron plates.

"At the present time plates run 8, 12, 15, 25, 30, 36 and 40 pounds of coating. This is too many varieties, and the difference in the amount of coating on them is too small. Four grades would be ample for every requirement and would simplify specifications, eliminate contentions and have a tendency to encourage architects to specify tin where they now specify other material. By using our influence as buyers with the manufacturers to withdraw from the market the 12, 20, 30 and 35 pound coated plates I am sure they would be benefited as well as ourselves, as the difference between the plates could be readily distinguished and the selection of tin plates would not be such a problem to architects, builders and to the tinner."



After some discussion a motion was carried that the tin plate makers be requested to limit the variety of roofing plates made to four different grades. A motion that the members purchase only guaranteed roofing plates was unanimously carried by a rising vote.

STOVE ITEMS.

Kelsey warm air generators will be used to heat and ventilate the new Boston Presbyterian Church at Mansewood, Ont. The James Smart Mfg. Co., Brockville, have the contract.

Keep catalogues handy so that you can order repairs intelligently. In many catalogues the parts of the stoves are shown together with the names, making ordering very easy. Give all the information possible when ordering repairs to a stove. The make and number of the stove, year or patent, etc., are all important.

How about your trade in stoves during the coming winter? Have you ordered a good stock? Aside from the prosperity of the farmers—which is governed by the crop—there are other things to take into consideration. Did the trade like that line you had last winter? Did it give universal satisfaction? If not, what was the chief trouble? Was it as high priced a stove as you could easily sell? Was it a fuel saver? Did it burn well the coal most commonly used in your section? Did you order too few or too many? Were larger firepots wanted, or smaller? These and a few hundred other questions the dealer must put to himself if he wants satisfied customers.

A PERFECT BAKER

—

The Empire Queen Range

is constructed to produce perfect baking. The heat is spread uniformly on all sides of the oven. After leaving the fire-box, it passes over the top of the oven, down the back and under the oven, up the back and over the top of the oven into the smokepipe, thus insuring the quickest and most satisfactory results. These are some of the good points about **THE EMPIRE QUEEN RANGE**—and there are many more.

Wouldn't you like the Booklet?

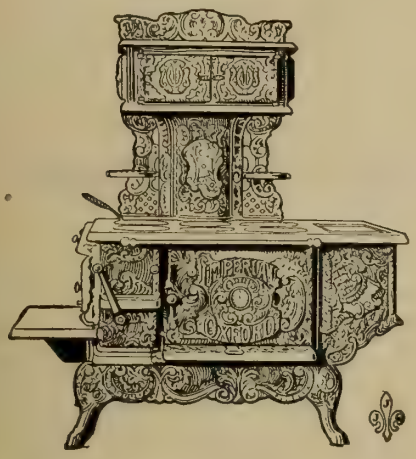
BASE BURNERS

are now in demand.

The base burner you want to buy is the base burner that will sell—the one with some individuality.

The GRAND IDEA is just a a little different from anything else on the market.



A little better and a little more up-to-date.

THE GUELPH STOVE CO., LIMITED

GUELPH

OUR SUCCESS IS MUTUAL. We realize it fully, and for sixty years have studied how to make the best range possible and give the dealer the best profit possible for selling it. Dealers who handle our goods can tell you how very satisfactory and profitable it has been for them.

Our guarantee bond is given with every range we sell

THE IMPERIAL OXFORD RANGE

contains more meritorious features than any other range ever made.

A SUPERB OVEN The Diffusive Oven Flue used only in the Imperial Oxford not only conveys the heated air in the most perfect manner, but acts as a ventilator as well. The most delicate pastry is baked exactly right and there is never any confusion of flavors. The draw-out oven rack is a great convenience in basting roasts.

DRAW-OUT DUPLEX GRATE This is not only the most perfect grate for burning fuel, but greatly facilitates repairs, as the bars are easily removed, without disturbing the fire-box linings.

A SPLENDID FIRE-BOX The fire-box in the Imperial Oxford is accurately proportioned to the oven size and always provides an adequate amount of heat. The water-front is exceedingly powerful and the reservoir is designed so as to yield a large supply of hot water at any time. The fire-box can be changed from coal to wood-burning with the greatest ease.

These are only a few points of superiority. Our handsomely illustrated catalogue giving complete details is sent on request. If you do not know the Oxford goods you should make their acquaintance at once. They yield handsome profits to you and perfect satisfaction to your customers.

THE CO-OPERATIVE IDEA

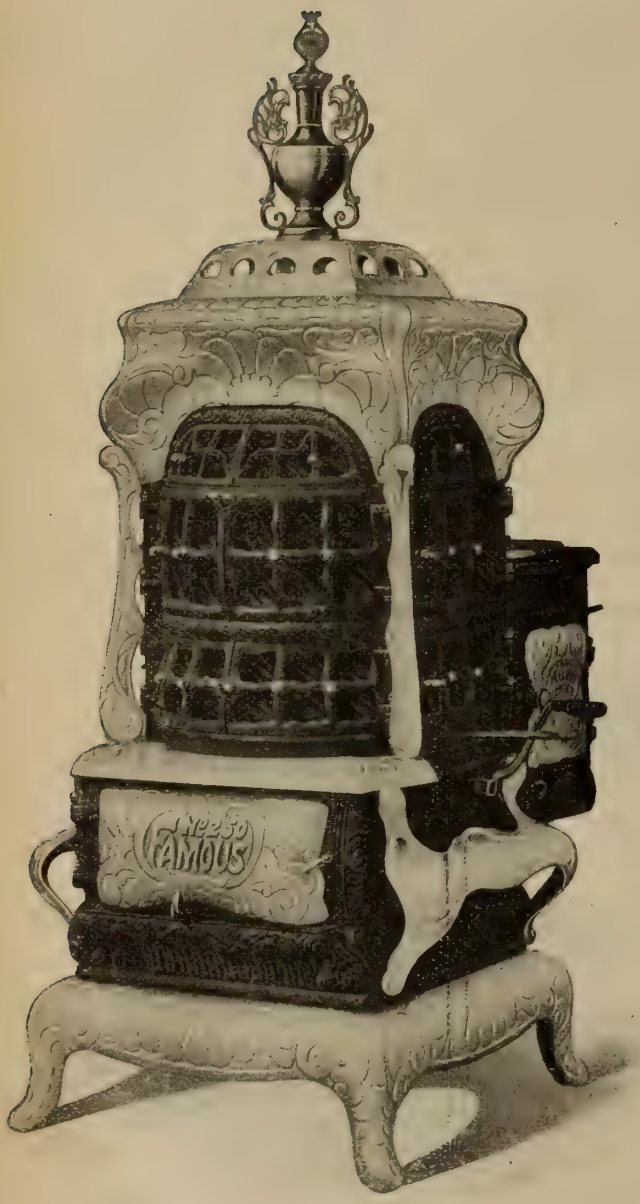
The Walker Pilot Steel Range affords more profit and more satisfaction than any other.

Live dealers everywhere commend the strong stand we have taken in maintaining proper profits for them.

Remember, perfection does not entirely consist of grey hairs—our Walker Pilot Steel Range, now one year on the market, has proved its worth many times over. It is staunch in its construction, modern and practical in its get-up, and goes hand-in-hand with a growing bank account.

Better get our agency and reap the benefits of dealing with a firm who co-operate with you for your benefit.

Let us hear from you.



WALKER STEEL RANGE COMPANY

LIMITED.

Grimsby, Ont.

"Famous" Base Burners

SERIES 230

Made also for Parlor

Three-Flue Base Burner

For Hard Coal

This stove is exceedingly heavy and durable, while the quality of the castings, finish of the nickel parts, ornamentation, close fitting of the doors, mica frames and all joints are of the very best workmanship.

Has been given a new and beautiful nickel dress, making the stove thoroughly modern in appearance.

The grates are a heavy duplex pattern, and are strong enough to grind up the hardest clinkers without breaking.

The fire-pot can be easily taken out by sliding the lower part of the magazine up and drawing the pot out through the front doors. Is replaced in the same way. The pot revolves, which saves continuous wear on one spot.

The three-flue construction, which is found only on this stove (others having but two flues), gives an increased radiating surface and produces nearly one-half more heat from the same amount of fuel.

Printed matter, including all our Base Burners, sent free to any dealer.

CANADA IN WORLD POLITICS.

A RECENT issue of the Outlook has an article drawing attention to the growing importance of Canada as a factor in the commercial and political problems which go to make up what is known as world politics. The writer argues that Canada is rapidly moving to a place on this continent in which she will be one of two, if not the largest, factor in its politics. Coming from a United States publication the article is significant as the spread-eagleism of Yankee journalism in the past has not allowed intelligent writers to draw attention to the wonderful resources and possibilities of the Dominion to the north of them.

Until the tide of immigration commenced to flow into the Canadian Northwest from the Middle and Western States practically no attention was paid to the development of this country, and not one "American" in a thousand would credit the statement that Canada's area is greater than that of the United States. The remarkable advances made in Canada's development during the past twenty years have not allowed the average Yankee engrossed in the growth of his own country to realize that there are other pebbles on the American shore. Canada has at last forced recognition, and it is not surprising that those who show the greatest amazement at this country's progress are our nearest neighbors.

The next quarter of a century holds much in store for Canada. What has been done in Manitoba, the Northwest and British Columbia since the construction of our continental railway will probably be repeated northwards in the fertile lands drained by streams flowing into Hudson's Bay and the Arctic Ocean. For a thousand miles north of Edmonton it is good farming country, and the Hudson's Bay Co. is now erecting a mill 300 miles north of Edmonton to grind the wheat grown in this rich district yet untraversed by iron highways. There are few who care to speculate as to Canada's possibilities of development to the north, but it is probable that the speculations of even the most optimistic will be more than realized.

Much could also be said as to Canada's strategical position as providing the nearest route connecting Europe and Asia, or at least the two island kingdoms which dominate these two continents. With Britain and Japan in close alliance, Canada's position is emphasized in importance. The Outlook, however, draws attention to another factor which bids fair to provide another source from which Canada will draw the elements which are required to make a nation great. It says:

"If a balance be struck of the natural assets of the United States and Canada, it is seen that Canada has the advantage in almost every respect. She does not as yet possess the sub-tropical lands, without which no country with a high standard of living can be regarded as economically self-contained. But it is manifestly her destiny to draw the West Indies, with British Honduras and British Guinea, into her political sphere of influence, and when this consolidation of British North America, for which Canadian statesmen-capitalists are preparing the way, is accomplished, she will hold within her far-flung boundaries every element of economic greatness."

THE WORLD'S HARVEST.

THE London Miller gives the following pithy summary of the harvest conditions of the leading countries of the world, which is particularly instructive reading at the present moment:

The crop outlook remains on the whole favorable, and seems to justify the expectation that the world's harvest will be a full average.

The French harvest has been delayed by unsettled weather in the north and northeast, and it is assumed that quality has suffered to some extent. Looked at in the most favorable light it now seems hardly likely that France can be self-supporting for the next cereal year—especially as old reserves are known to have been exhausted. As bearing upon market values, however, this feature cannot count for much at the present, as it is not likely the French will appear as buyers of wheat for import for many months, probably, indeed, not before next Spring.

It is claimed that Russia has, on the whole, grown a full average crop. The surplus from the Danube countries, the output of southeastern Europe, will be maintained at about the standard of last year. Probably this will be so, at any rate in the early stages of the new crop, and more especially as Russia is supposed to have a considerable quantity of old wheat remaining over from her recent years of plenty. The action of this shipper during the ensuing year, needless to say, is of vast importance to the home milling trade, as from this source they have drawn a very large quantity of useful wheats during recent years.

In India the outlook is not encouraging. The monsoon has been irregular, and in many districts there has been a considerable deficiency of moisture. It looks, on the whole, as if the supply from this source will be restricted during the current crop year, and, moreover, as if the price would not be low relatively as it has been during almost all of the last year.

The American position seems to show a distinct improvement on the week. Harvest is now in full swing in the Spring wheat belt, and already new wheat has appeared in Minneapolis. Estimates cabled during the week put the crop in the three great wheat growing States of the Northwest at 200 million bushels, a result which, if borne out, must inevitably bring the American miller once again into our market as a competitor. Already, indeed, flour business has begun on the new crop, Top Spring wheat patents having been placed here this past week at 26s. c.i.f., 27s. landed for September despatch from mill. We may, however, add that a large breadth of wheat still remains to be secured in the northern portion of the belt, so that the present outlook may be somewhat modified before the crop has all been secured, but looked at all round it seems fairly certain that the American miller will again be in evidence.

The crop in Manitoba and the Northwest Territories continues to be well spoken of, and a full surplus of wheat for export is confidently anticipated.

PROFESSOR MAVOR'S REPORT.

A VOLUMINOUS report on the wheat growing capacity of the Canadian Northwest has been prepared for the British Board of Trade by James Mavor, professor of political economy in the University of Toronto. The report is published under the auspices of the British Board of Trade, and it is described as a "Report to the

Board of Trade on the Northwest of Canada, with special reference to wheat production for export." As is explained in the Blue Book, Professor Mavor was instructed to conduct an inquiry with the object of throwing "all possible light . . . on the existing conditions and future prospects of wheat growing in the Northwest of Canada for export to the United Kingdom." Clearly it was the desire of the Board of Trade to have some authoritative statement regarding the claims of Canada to be considered the future "Granary of the Empire," and unless immediate action is taken by the Canadian Government to correct the many mistakes and false conclusions contained in the report it will be considered authoritative by the British public, and work this country incalculable harm. For Professor Mavor personally we have the highest respect and admiration, and we can not believe that he would deliberately lend himself to an attempt to deceive and mislead the British public and to malign this country in order to provide campaign literature for the Little England party in the home land. The most charitable explanation is that the learned professor undertook a task for which he had no special qualifications and that he allowed his well-known anti-Chamberlain, anti-Imperial prejudices to warp his judgment.

Any graduate in political science from the University of Toronto in recent years is well aware that in the preparation of term essays by his students the learned professor always insisted that authorities should be quoted for all statements made. If then it is found that Professor Mavor fails to state his own authorities in this important report he is sinning against light. There are various reports and various authorities on the wheat growing capacity of the Northwest to which Professor Mavor might have referred, but he disregards such reports as those of Dr. Saunders, Dominion Director of Experimental Farms, and Hugh McKellar, late Deputy Minister of Agriculture in the Province of Manitoba, and bases all his conclusions upon the estimates of two anonymous gentlemen. Who these gentlemen are, what their qualifications to estimate the wheat growing capacity of the Canadian west, in what respect they are better qualified to judge of these things than Hugh McKellar and Dr. Saunders—on all of these points Professor Mavor's readers are left entirely unenlightened. Surely this is unfair; surely the value of the report is discounted at the start by such methods.

Hugh McKellar estimates the total wheat growing capacity of the Canadian Northwest in any one year at 1,000,000,000 bushels. His position as Deputy Minister of Agriculture in the Manitoba Government afforded him exceptional opportunities for independent investigation, and this is his estimate. Dr. Saunders, Dominion Director of Experimental Farms, estimates the total possible wheat crop at 800,000,000 bushels. Professor Mavor disregards these estimates by men who have exceptional opportunities for investigation, and he quotes two anonymous estimates. The first places the total possible wheat crop at 253,975,000 bushels, and the second at 357,445,000 bushels. Professor Mavor pins his faith to the first of these anonymous estimates.

According to the official report issued by the Manitoba Department of Agriculture in June, there were 2,643,588 acres of wheat above soil in Manitoba at that time. But Professor Mavor says that the total area available is only 2,800,000 acres. That is, there are only 156,412 acres of new land in the Province of Manitoba immediately available for wheat production. Such a statement is simply absurd. If Professor Mavor would disregard for a moment the opinions and estimates of anonymous gentlemen and consult the reports of the Department of Agriculture of the Province of Manitoba he would find that there are in that Province at least 25,000,000 acres out of a total of 41,169,098 acres immediately available for cultivation. About one-sixth of the available 25,000,000 acres is now under cultivation.

If Professor Mavor's report were not published as an official Blue Book it would do this country little harm, but under the circumstances it will be quoted as the final word upon the subject until such time as the actual wheat production of the Canadian west exceeds the anonymous estimates favored by Professor Mavor. Under the circumstances it is the plain duty of the Canadian Government to show the British public how utterly misleading the report is. The Winnipeg Board of Trade are already preparing a protest, but action by the Dominion Government is urgently required.

AMERICAN GOODS IN MANITOBA.

So marvelous is the development of Western Canada and so great is the interest displayed by easterners desirous of locating or extending their trade on the prairies that it has become a popular move for the most enterprising daily papers to send special correspondents to write descriptions of the rapid changes made and the various phases of life seen in the development of a new country. Readers of the MacLean Trade Newspapers are well-informed regarding the expansion of our country as permanent representatives are maintained in the large centres.

In a recent letter to the Toronto Globe a special correspondent making a tour of Southern Manitoba discovered that Canadian manufacturers were not securing all the trade in that district, especially in machinery, shelf hardware, stoves and ranges, his article reading as follows :

"Agricultural implements are by no means so exclusively Canadian as is furniture, even considering that the International Harvester Company now manufacture at Hamilton. Americans have so long been making machinery for prairie farms and have so many old patterns up here that in not a few cases the preference is for the American machine, and that even among Canadians. An immense amount of shelf hardware made in the United States is sold all over Canada. It is, therefore, not surprising that it should be found out here. But it is surprising to find that a large number of American-made steel ranges are carried in stock and sold by local hardwaremen. That is true all along this line. The American goods cost more, but these western people want the all steel and malleable ranges, which are worth retail up to $70 and $80. Just now the idea of a malleable instead of cast iron top on a stove is popular, and Canadian stove men would profit by meeting the popular idea. The American ranges are kept in stock by all the bigger dealers and a large number are sold.

"Hardwaremen along this line do considerable business with Duluth and Chicago houses. They say they can get shipments in and through the customs equally as quick as from Winnipeg or the east. Canadian manufacturers and traders must look to holding their trade up here, not through an increase in the tariff, but through careful attention to the character and wants of their customers, and by prompt and safe delivery of the goods. The west is against increasing the tariff. These people speak of the American as being satisfied with less profit than the Canadian, but wanting more business, which he is out to get in Manitoba. The Canadian, they say, is less aggressive and inclined to be satisfied with what he has succeeded in getting. That is a mistaken conception, but it exists in the minds of many people and can only be superseded by diligence and adaptation on the part of our eastern people. Everything that can be done to annihilate the barriers of time and space between the east and west ought to be done. The difficulty should not be accentuated by any neglect to attend to secondary things."

If it is a fact that manufacturers in Eastern Canada are unable to successfully compete with competitors in the States it is an additional argument in favor of improved transportation facilities between Ontario and Manitoba and

it is gratifying to know that the Canadian Pacific Railway are double tracking their line in order to give better service.

Eastern stove manufacturers disagree with the statement that they are behind their American competitors in the manufacture of the steel and malleable ranges and an inspection of their exhibits at the Toronto Exhibition certainly showed their ranges to be thoroughly modern and up-to-date. If a large share of the western trade is going to American stove manufacturers, however, it behooves the Canadian founders to discover the reason and take such steps as will secure this trade for the Canadian plants.

WHAT ARE FAIR PROFITS?

WHAT is a legitimate profit ? That depends on the article, the community, and other conditions. It also depends to a large extent upon the merchant himself. Some merchants will get a bigger profit than others on the same article and under the same conditions. At the same time their standing with the trade will be better than that of the merchant who is selling on a smaller margin.

That is the difference in personality. Simply one of the many illustrations of the truth that the difference in results is frequently found in the difference in men.

Now and then it is conclusively demonstrated that a retailer is charging too much profit on some particular line. But as a general thing that is the exception. On most lines the retailer does not charge enough profit. Why ? He is afraid of the fellow down the street and the fellow down the street is afraid of him.

So when it comes to marking goods, fear of the other fellow is the great influence which bears the price.

Run your own business. Be your own judge of the margin of profit to ask. When you price the goods, consider only the value and your community. Leave your competitor out of it.

To be sure, competition is a factor that must be considered. But most merchants consider it too much. In marking their goods they make it the great determining influence.

It has been said that many lines in many retail stores might be advanced ten or fifteen per cent. without any change in the trade.

At first that may sound foolish. But the more you think of it the more like real truth it seems. If you think of it enough you will come to believe it.

When you reach that stage, advance some of your lines. At the same time give the clerks convincing talks on the values. Then watch the results.

Some readers of this paper have tried this experiment. They are converted now and are getting better profits than they did a year ago.

You are probably selling many lines at a smaller margin of profit than you should. Get better prices.—The Hardware Trade.

BENEFITING CANADA.

MANUFACTURERS in this country are not worrying over the present boycott of United States goods entering China. The situation is the outcome of a discrimination against Chinese labor as well as a lack of discrimination when their travelers, merchants and scholars attempted to enter the republic. This result had never been anticipated, but is a natural retaliation that is causing the Americans considerable concern at the present time.

Already inquiries have been received from China regarding Canadian manufactured products, and before the trouble is adjusted many of our enterprising manufacturers and jobbers will have secured an opening for future trade with the Celestial Empire. Our strenuous neighbors will some day waken to the fact that a generous policy in dealing with other countries is, after all, the most profitable.

OUR TRADE WITH WEST INDIES.

IT is now some ten years since steam communication was opened up between Canada, the Windward West India Islands and Georgetown, Demerara. At the time of the inauguration of the steam service the trade was carried on by sailing vessels from Nova Scotian ports, and by steam via New York; as with all business the world over, steam has superseded sail to a very large extent, and this applies to the Canada-West Indian trade as well as all others. During the early stages of the enterprise the difficulties in connection with this trade were almost insuperable. Year by year, however, the obstacles are being removed and for a few years past the exchange of products has been steadily growing in volume.

The Government of Canada has from time to time granted assistance to this enterprise and has so revised the tariff as to favor the importation of British Island sugar and other products. The Government might perhaps go a little further and consider what it could do in connection with encouraging the direct importation of West Indian fruit, which at present goes largely to the United States. From the Canadian standpoint the advantages for such a market as the British West Indies and Demerara afford should not be lost sight of. Canada, however, is a young country; her manufactories are young, consequently with the rapidly increasing demands of the home market, it is more perhaps than Canadian manufacturers can be expected to do to supply the West Indian trade. Flour is of course produced in Canada in enormous quantities; the market in the south is not a small one, and is well worth the strenuous efforts of Canadian millers.

By close attention and continually following up the shippers and receivers, the West Indian markets are receiving more and more attention. There is also a growing increase in the exports of flour. Canadian peas, too, are finding their way to these markets through Canadian channels in very much larger quantities. Boots and shoes, corn brooms, butter, cheese, paint, cordage, box material, furniture and other manufactures of wood are being shipped in increased quantities, and it would appear as if the wedge having once entered the opening will increase; that is, the volume of traffic will grow year by year.

A great deal, however, depends upon the manufacturers and commission houses themselves; the steam service is an established fact, and it is up to the Canadians who are in these special lines of business to improve their opportunities and make the interchange of products one of considerable moment in the trade of the Dominion. So far as imports are concerned, the quantity of sugar has during the last five years increased from almost nothing to some 80,000 to 100,000 tons for the first half of 1905. The coffee used in Canada should find its way here from these islands, as well as cocoa and fruit. The consumption of these articles will increase with the rapid growth now going on in Canada so that this half of the business is not without its bright side.

To Pickford & Black belongs the credit for having established this business; they have followed it along with considerable energy up to the present time. At first their service was monthly, now it is semi-monthly, there being six boats employed in the West Indian traffic. All credit is due them for the persistent manner in which they have followed up the business in the face of many difficulties and discouragements.

Oil and oil cans are in season. With the coming of the harvest farmers require much machine oil. And then there are the cream separators that require oil the year around. Keep a good grade of oil for them.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 62.)

Quebec Hardware Markets.

Office of Hardware and Metal,
232 McGill Street,
Montreal, September 8, 1905.

FALL fairs are causing a lull in business this week, as many of the travelers are off their routes and entertaining their customers at the exhibitions. In spite of this fact, letter orders are coming in freely so that the trade is by no means stagnant. One of the features of this week's business is the movement of case goods in anticipation of the Christmas trade. Other lines that are being shipped in good quantities are axes and hay wire. The disposition to cut prices on axes is no longer apparent, a very firm tone being given to the market.

The continued strength of pig lead and ingot copper is bound to have some result on the prices of many hardware lines. Already an advance is threatened.

Snowshoes are now being displayed by one of the wholesale firms who took up this branch last year. They report that the demand for the coming season promises to eclipse that of 1904-05, and they have arranged to have a large stock on hand. Last year, they were unable to keep up with the demand.

The dullness which has been evident in the lantern trade throughout the Summer will be brightened up by the fact that some important manufacturers have withdrawn prices on lanterns, and their example will probably be followed by their competitors. Lantern orders, which were booked a long time back, are now being sent forward in good volume. the threatened advance having stimulated the retailers.

Axes—A decided awakening has taken place, the result being that prices are firmer than they have been for some time. None of the local firms anticipate any further cutting. We quote as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—A brisk movement is reported. Prices remain firm. Axe handles No. 3 $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a doz.

Sewing Machines—As the Fall approaches, the demand is getting stronger. A good trade may be predicted this season. Prices are as follows: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—The expectation of an advance has at last given a better outlook to this branch. Many orders booked at the time of the slump. are now being asked for by the dealers. While some manufacturers have withdrawn prices, we may still quote: Cold blast, $4.50; No. 0, Safety, $5.50.

Rivets and Burrs—There is the usual call for these lines which are still selling at the following prices: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—In common with all staples are enjoying a remarkably good demand. Our quotations are as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Are selling well, and are being frequently called for by the trade. We give prices as follows: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Wire Nails—The market is somewhat stronger than at our last report. Our prices are: $2.10 to $2.20 per keg f.o.b. Montreal

Cut Nails—Only a moderate demand is shown. There has been no change in prices and we still quote: $2.20 per keg f.o.b. Montreal.

Horseshoes—This is one of the best selling staples at the present time. We quote: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and large, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Arms and ammunition are still selling very strongly. Rifles are in particularly good demand just now. Our prices are as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Trade is looking up now and a fairly heavy movement westward is reported. Prospects for Fall trade are very bright, especially in view of the lage railway contracts about to be undertaken. Many shanties along the lines of construction and in the lumber camps will have to be erected, and the result is bound to be a boom in building paper. Local houses are hoping to get a share of the resulting business. Prices are unchanged.

Cordage—A good movement is noticed. No change has been made in the price.

Cement and Firebrick—Things are rather quiet this week and dealers are engaged in planning for the Fall business. We still quote as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35.

Coil Chain—No change in price is to be noted. A good volume of business is being done. We give prices: 5-16 inch, $4; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—Quite an active market is evident in this line. Prices are: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—Large orders are now being shipped to wide awake dealers, who are stocking up for a big season. Our prices are: 25c. to $2.50, according to quality.

Sleigh Bells—This is one of the best of the lines now going forward. We still quote as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—Orders are coming in from all over the country, and are being shipped daily. We quote: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—This has been found a very profitable side-line by many leaders, and there is every sign of a large business again this Winter. We give prices from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Sept. 8, 1905.

CROWDS of visitors in Toronto to visit the Exhibition have somewhat demoralized business, but dozens of visitors have called at the hardware jobbing houses and left good sized orders. Travelers have been in the warehouses aiding in handling the rush, and their absence from the road has meant the receipt of many letter orders.

The chief features of the trade at present continue to be sorting orders for builders' hardware and staple lines. The trade in builders' goods this season has been exceptionally large, there having been a very active building season in the country districts as well as in the towns and cities.

From now on there will be an increasing trade done particularly in guns and ammunition, and in cutlery. Later on Winter goods will come in for repeat orders, the bulk of the regular orders being now booked. Cutlery and case goods are beginning to move already. Ammunition is in active demand, the possible increase in prices of shot stimulating trade somewhat.

Prices continue unchanged.

Sporting Goods—Shot guns and ammunition are meeting with a large sale and an increase is looked for on shot, owing to higher prices of metals.

Washing Machines—An increasing demand is reported.

Chain—Fall trade is beginning to pick up. We quote as folows: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders— The opening of Fall has brought an increased trade. We quote: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Good business is reported at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demand for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—Demand is active and stocks are being called on heavily.

Wire Nails—Trade is very large, but stocks are ample for all demands. Prices are the same.

Cut Nails—There is a very satisfactory trade being done. Quotations are: $2.40 per keg f.o.b. Toronto.

Horseshoes—Good business is being done and a large Fall trade is looked for. Our quotations are: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Axes—It is a little too early to expect much business, but trade is good.

Cutlery—Trade is increasing and case goods particularly are in demand.

Skates and Sleigh Bells—Large orders are booked for future shipment, an increased trade being indicated by the orders in hand.

Horse Nails—Trade is active at unchanged prices.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—Trade is fairly good. Some agricultural implements have withdrawn from the market, however.

Cordage—Sorting orders are coming in. Our quotations continue as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—There is no change in the market this week. Business is very good. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse, Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Demand is strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 20c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—A good business has been done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool— An eccentric market still rules in these lines. Supply is still slow, with demand maintained in face of abnormally high prices. Similar conditions are in certain foreign points, where great scarcity is felt. Our revised quotations are ruling firm, with supply scarcely equal to demand. We quote:

Hides, inspected, No. 1 per lb.		0 12
" " " 2 "		0 11
Country hides, flat, per lb.	0 10	0 11
Calf skins, No. 1, selected		0 14
" " No. 2		0 12
Lamb skins and pelts		0 85
Rendered tallow, per lb.	0 04	0 04½
Unwashed wool, new clip, per lb.	0 16	0 17
Wool-washed fleece	0 26	0 27
Rejections		0 20
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 8, 1905.

IN spite of the conclusion of the war between Japan and Russia, pig lead, instead of weakening has actually strengthened in tone during the past week, and a couple of small advances were also reported. We still give the same figures as last week, however, and are confident that they will cover this week's conditions as well. What the effect of peace will be is difficult to foretell, but it is almost a surety that pig lead has now reached its top-notch price. It is higher now than it has been for many months.

A surprising feature of the week just past was the lower tendency of tin. No actual falling off in price occurred, but the tone of the market is distinctly for shorter prices in the future.

Ingot copper is still soaring, an advance of 3-4c. is noted in ingot with a coresponding advance of 1-4c. in sheet copper. Antimony seems to be at its top figure now, though it is still very scarce.

Canada Plates—No change has taken place in the condition of the trade. We give prices as follows: 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper—Lawson's threat to break copper has not been felt in the local market as yet, and indeed, there was a further advance during the week in both ingot and sheet copper. Current prices are: Ingot copper, 17 1-2c.; sheet copper, 24 3-4c.

Ingot Tin—A stop has been put to the advance of tin, and the market is decidedly weaker in tone. Local stocks are light. Futures are lower. Prices now are: 36 1-2c. to 37c. per lb.

Pig Lead—Some small advances were noted during the week, but on the whole, our figures of last week are still ruling, though these may be considered very firm. We quote from $3.80 to $3.90 per 100 lbs.

Boiler Tubes — Sales are being made in good volume. Our prices are as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Lead—The market is very quiet this week and local dealers are adding to their stocks more heavily than they desire. Prices stand as follows:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.50	"	"
" (special)	18.50	"	"
Ayresome No. 1	18.50	"	"
" No. 3	17.75	"	"
Summerlee	18.25 to 18.75	delivered	Montreal.
Clarence No. 1	17.75	"	"
" No. 3	17.25	"	"
No. 1 Cleveland	17.50	"	"

Tool Steel—Prices are still quoted as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—No remarkably large orders are being sold at present. Our quotations are as follows: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2; spring, $2.75;

toecalk, $2.62 1-2; machinery iron finish, $2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—Trade is fairly good, the following prices being quoted: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—The demand is exceptionally good this week. Prices are unchanged and are quoted as follows: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15;; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c. extra.

Black Sheets—An increase in the price of raw materials has made the market even firmer in tone. We quote: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—No further advance has taken place and dealers are hoping that the top price has been reached. Many jobbers are still short in their supply. The price now asked is 16c.

Sheet Zinc—Although we give last week's prices, some firms have found it necessary to make another advance. We quote: Cask lots, $7.25; small lots, $7.50.

Tin Plates—Prices remain as before. We quote: Cokes, $3.75; charcoal, $4.

Ingot Zinc—This is another line in which higher figures are being asked by some dealers. We still quote, however: 6 1-2c. to 6 3-4c.

Scrap Metal—Iron is becoming more active in the United States and some Canadian dealers are taking advantage of this fact to export their scrap. As there is no duty to pay, only the freight has to be reckoned upon. Scrap copper is still high in tone. No changes have been made in any old materials. We quote as follows: Copper and wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 5-8c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed scrap, 75c. to 90c. per 100 lbs.; old rubbers, 5 1-2c. to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, September 8, 1905.

METALS continue strong with no advances reported on the local market, the conditions existing last week being repeated. Pig lead continues strong, but the impression prevails that quotations will not go higher than at present. Of all the metals, however, tin appears to be the only one which is weakening. Antimony continues very scarce.

Pig Iron—Many of the mills are booked ahead with orders and stocks are light. Quotations continue unchanged, as follows:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—There is a very active market. The mills are running to their full capacity. We quote: $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—The market is not as strong as last week. We quote: 37c. to 38c. per pound.

Tin Plates—Demand is active with prices not so firm.

Galvanized Sheets—An excellent demand is reported. Prices are steady.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—The market continues strong, with stocks light and demand very active. Prices are very firm. We quote: Pig lead, $4 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—There is an active demand. Prices are steady: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Higher prices are looked for and present figures are very firm. Our quotations are as follows: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—In spite of the excesive prices ruling, there is an active demand. Stocks are very light.

Old Material—Copper and brass are very firm and stocks are very light. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9 1-2c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Anthracite is meeting with an increased demand. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, September 7, 1905.

THE feature of the market during the past week has been the heavy buying of steel rails for 1906, notably on the part of the Western lines. It is estimated that the total sales foot up to fully 250,000 tons. Among the large orders are 70,000 tons for the Chicago & Northwestern, 55,000 tons for the St. Paul and 50,000 tons for the Chicago, Burlington & Quincy. In the South the Atlantic Coast line has taken 15,000 tons, while the Tidewater Railway has ordered between 8,000 and 10,000 tons and the Reading road 15,000 tons. It is understood that during the next two weeks the requirements of the Pennsylvania and the New York Central roads will be brought out.

Further heavy equipment orders have been placed, the Pennsylvania leading with over 16,000 steel cars. Among the orders to be placed is a lot of 1,000 steel cars for the Lake Shore & Eastern, controlled by the Steel Corporation.

The activity in nearly all lines of finished material is evidenced by the fact that the orders booked by the Steel Corporation for August make that the record month. The pressure which caused the advance in the price of structural material from 1.60c., base, Pittsburg, to 1.70c. last week is expected to lead to a like advance in the price of plates at an early date. Angle bars have been put up to 1.50c., Pittsburg, and some makers of iron bars are holding out for higher figures.

From Cleveland comes the news that contracts have been let for two additional ships, and it is reported that two ore vessels of exceptional size are to be given out at an early date.

In the pipe trade the principal item of interest has been the placing of an order for 60 miles of 18-inch pipe by the Ohio Fuel Supply Company. A smaller order placed is for 15 miles of 10-inch pipe.

In the pig iron trade it is worthy of note that there has been some contracting for foreign iron. A tidewater steel plant has purchased a lot of English Bessemer, the exact quantity not being known, while a large maker of cast iron pipe has bought a round lot of Middlesbrough pig. In both these cases the iron is to be used to cover export orders for finished product. A serious effort was made to compete with foreign iron for domestic orders for low phosphorus pig, but the business was taken by home furnaces. Sales aggregate about 15,000 tons of iron of this character at $20.50 to $20.75, about one-half going to a large New England wire plant and the balance to steel works in eastern Pennsylvania.

So far as Bessemer pig is concerned, it is quite evident that the Steel Corporation will probably need additional quantities of outside iron. There have just been ordered into blast the Niles, Columbus and Riverside furnaces, so that every stack belonging to the Steel Corporation is now on the active list with the exception of Zanesville. Of course from time to time furnaces must blow out for repairs. Thus one Duquesne has just stopped and one Carrie is expected to blow out.

For early delivery there is a fair activity in foundry irons, but there is no general movement as yet to contract for delivery during the first part of 1906. There is some manoeuvering going on, with the conflicting reports which usual-

LONDON METAL MARKETS.

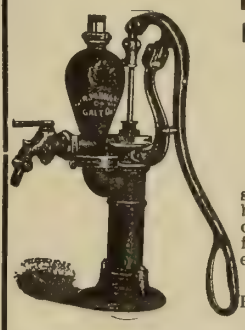
From Metal Market Report, September 6, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 48s. 3d., and Scotch warrants at 5s. 6d., making prices as compared with last week unchanged for Middleboro and 1s. higher for Scotch warrants.

Tin—Spot tin opened firm at £148 7s. 6d., futures at £147 15s., and after sales of 130 tons of spot and 180 tons of futures, closed firm at £148 12s. 6d. for spot and £147 17s. 6d. for futures, making prices as compared with last week, £1 12s. 6d. lower on spot, and £1 15s. lower on futures.

Copper—Spot copper opened easy at £69 17s. 6d., futures £69 12s. 6d., and after sales of 150 tons of spot and 600 tons of futures closed weak at £69 5s. for spot and £69 for futures, making prices as compared with last week £2 5d. lower on spot and £2 lower on futures.

Lead—The market closed at £14 5s., making prices as compared with last week, 3s. 9d. lower.



Spelter—The market closed at £26 7s 6d., making prices as compared with last week, 15s. higher.

Nova Scotia Trade News

CONSIDERING the season of the year a fair volume of trade is being done. Jobbers say that business is about as satisfactory as can be expected, as this is generally looked upon as the dull time of the year in the hardware trade. The price of wire nails is attracting more than ordinary attention in the Maritime markets at the present time. A short time ago the Montreal jobbers dropped the price fifteen cents and this has had a very serious effect on the markets in the Provinces. With this cut the Montreal dealers have captured the Cape Breton market, and also considerable of the trade of that county. The Montreal men took advantage of the low water freight rate to Cape Breton, and made a leader on nails so as to secure other business, and in this move they have been successful.

As soon as the Maritime men learned of the cut made in Montreal, they called a meeting, and it was decided to ask the two firms manufacturing nails in New Brunswick to reduce the price so as to meet that made by the Montreal men. These manufacturers, however, only made a cut of ten cents, which was insufficient, and in consequence our dealers have lost the trade. Some Maritime dealers who made sales before the cut are now in a peculiar position, as the Cape Breton people who made the purchases are asking for a rebate. One firm here was asked to quote on a two carload lot, and though the price was figured as fine as possible, the dealer failed to secure the order in competition with the Montreal men.

WANTED—Tinsmith at once; must be good at jobbing and eavetroughing; state wages and experience. Keys & Morrison, Lindsay, Ont. [36]

WANTED—Coopers to make apple barrels at Belleville; steady employment to good men till end of season; come at once; highest price paid; 40,000 barrels to make. R. J. Graham. [f]

BEAMSTERS wanted; first-class men only need apply. James Robson & Sons, Oshawa, Ont. [f]

BRUSH MAKERS wanted, boring and drawing hands, finishers, etc.; steady work. Apply Boeckh's Factories, 80 York st., Toronto. [f]

BUSINESS CHANCES.

IF you wish to buy or sell a business anywhere in Western Canada, it will pay you to communicate with us. We have some good legitimate propositions on our list; handle nothing else. Address The Business Brokers, 611 McIntyre Block, Winnipeg, Man. [tf]

TENDERS will be received by the undersigned executors of the late James M. Martin for the purchase of the good-will and stock in trade of the hardware business of the firm of Martin Bros., of the city of Rossland. An inventory may be seen and particulars obtained from the executors.

Wm. Martin,
W. M. Wood,
Executors. [39]

FOR SALE.

A FIRST-CLASS foundry in good running order, equipped with cranes and overhead trolley, machine shop and pattern house; works are situated on two acres of land at New Toronto, just outside city limits, with splendid shipping facilities; modern plant in every respect. Address Pease Foundry Co., Limited, 191 Queen street east, Toronto. [38]

A WELL established stove and furnace business in the thriving town of Burlington. Box 65, Burlington. [36]

TENDERS WANTED.

The Assignee of Estate of J. A. Stovel, Edmonton, invites Tenders for the following parcels:

No. 1. Stock of Hardware, etc. - - $20,760.00
No. 2. Accounts and Bills Receivable about - - - - - - - - 5,000.00
No. 3. Equity in Buildings and Real Estate, Main Street, Edmonton.

Tenders to be received by J. H. Ashdown, Winnipeg, on or before Tuesday noon, 21st September.

The highest or any Tender not necessarily accepted.

Stock sheets may be seen at the Office of the Assignee, Edmonton; or at the Office of The J. H. Ashdown Co, Winnipeg, and Hardware and Metal, Toronto, Ont.

The price of copper is very strong and shows a tendency to increase in price. Some dealers here were buying up all the old copper that was available during the week, and for this scrap they paid 13 cents per pound cash.

Some orders are now coming in for axes. The price of axes is much higher than last year. Axes that were sold for $5.50 per dozen last year are now quoted at $7.00. This is due to an increase made by the mandfacturers.

The Robb Engineering Co. last week shipped two engines to Winnipeg, and the Amherst Foundry Co. shipped a carload of enamel ware to the same city.

The Dominion Iron and Steel Co. of Sydney are to import two thousand tons of coal from the Cumberland Coal & Railway Co., Springhill, N.S., to be utilized in the manufacture of coke. The coaf will be used as a test to ascertain whether it can produce a better quality of coke than the Glace Bay product.

Prices quoted here follow:

MINES AND METALS.

A deposit of coal has been discovered near Okanagan Lake, B.C.

* * *

It is proposed to erect a smelter at Princeton, in the Similkameen district, B.C.

* * *

Iron ore has been found at Temagami on ground owned by J. B. Caldwell, M.P.

* * *

Fire did $100,000 damage a few days ago to the wash plant of the Dominion Coal Co., at Port Morien, N.S.

* * *

The Dominion Government has appointed experts to investigate the character and extent of the zinc deposits in B.C.

* * *

The Granby Consolidated Co. have completed the purchase of the Gold Drop group of claims in the Phoenix camp, B.C., for $250,000.

* * *

The new concentrating plant at the Erittania Copper Mine, Howe Sound, B.C., is ready to start. Two hundred tons of copper ore are mined daily.

* * *

Native silver in thread formation has been found near Carcross, in the Yukon district, in rock that runs $1,100 to the ton. The owners of the find are preparing to expend $200,000 in developing.

* * *

The Superintendent of Mines, Dr. Haanel, has just completed the organization of a party that will shortly leave for British Columbia to investigate and report upon the extent of the zinc deposits of that Province. W. R. Ingalls, M.E., editor of Mining Review, will have charge.

* * *

Until Spring, or such time as the Legislature makes new regulations, no more patents for mining claims in Coleman, Bucke, Lorrain and Hudson Townships will be issued by the Ontario Government. In the meantime, however, prospecting may go on and when the new regulations come in force priority will be given to claims in the order filed.

* * *

It is claimed that one of the plans now under consideration by the Lake Superior Corporation is the opening of the nickel reduction works. It has been stated that a deal had been made whereby this plant had been leased for $60,000 a year, but the story was denied. It was admitted, however, that a deal was on and might be consummated at any time.

* * *

The Nova Scotia Coal and Steel Co. have now on their pay roll 2,200 men whose monthly wages amount to over $130,000. Up to the present this season the mines have had an output of over 250,000 tons of coal or at least 150,000 tons over the corresponding period last year. Most of the coal this season has been shipped to the St. Lawrence market.

* * *

New uses are being found for nickel in a variety of industries, and its possibilities are only just beginning to be appreciated. The British Government have been considering the question of employing it for coins, as is done in many continental countries. Arrangements have already been made for nickel coins to be circulated in one of the colonies, and they will be ready for issue in a short time.

* * *

Copper refined in Canada is now being sent forward to China to be used in connection with the coinage of that country, one shipment of 100,000 pounds having gone forward, while another of 50,000 is about to be made. There is at present only one copper refinery in Canada. The Montreal Copper Co. now have a ten-ton-a-day plant in operation, and while it is not yet much of a factor in copper production, the management state that they have been able to compete against the copper trust in the United States, and will grow.

* * *

The Lake Superior Corporation, operating the Sault rail mills and furnaces, have awakened to their need of iron ore, and are now about to carry on explorations at various points in Ontario, where there have been sufficient indications to warrant expenditure. This is a pretty wide field, running from east of Michipicoten to west of Thunder Bay, and for a time the work will be in the nature of reconnaissance, though at some points the company have faith that they can quickly get at good ore. Algoma, or Western Ontario, has been merely scratched by the prospector, and it would appear that with the extensive

and energetic work that has been done on the American side there would be important results, especially as there are indications galore. This work will doubtless be under charge of A. B. Wilmott, whose knowledge of the region is not surpassed.

* * *

Experiments in electric smelting, which are to be conducted at Sault Ste. Marie, will be commenced in about two months. Mr. Herault of La Praz, France, inventor of the Herault system of smelting by electricity, will come to Canada to give the Government the benefit of his advice. Investigations so far made into the electric system of smelting and the valuable report published on the subject under the auspices of the Canadian Government have attracted world-wide interest, and no less than 2,500 commendatory letters from all quarters of the habitable globe have been received by Dr. Haanel, Superintendent of Mines.

* * *

The Canadian Copper Co., who have within the past two years spent $2,000,000 on plant and betterments in connection with their nickel mines near Sudbury, have about completed arrangements for the sampling and purchase of the refractory and valuable ores of the Cobalt district. A crusher is being erected at Copper Cliff, the smelter town of the company, a skilled chemist from New York is to be engaged, and the cobalt ores will be purchased on the plan in vogue at Denver, Omaha and other mining centres in the west. An umpire will be chosen in case the chemists for buyers and sellers differ as to value, and on the certificate of this umpire payment will be made.

* * *

All mining explorations that have been under way in the vicinity of Loon Lake have ceased for the present and the efforts of the owners of the properties explored are now directed toward selling their holdings. Wiley Bros., of Port Arthur, who are leading owners in these developments, state that they have very rich finds but the general mining public is inclined to doubt this. Just now experts for the Jones & Laughlin Steel Co. are on the ground making preliminary examinations. There has been some diamond drilling with considerable pitting by the original explorers, and newspapers of the district have had much to say of results, but this sort of information is notoriously unreliable. The Government drill is now on some property of R. H. Flaherty, who has been connected more or less with iron explorations for some years, but this week the drill is idle. These finds lie on the south side of Loon Lake, and about three miles from Lake Superior, 25 miles east of Port Arthur, and if valuable are certainly well located for prompt and cheap shipment.

A GROWING BUSINESS.

Taylor Bros., hardware merchants of London, have recently made a large addition to their store at New Liskeard. The addition of about forty feet to the building will give them much larger space and allow them to handle their raoidly extending business in this thriving new Ontario town. The firm also have a branch at Cobalt, where they are capturing a large share of the trade in mining supplies. Mr. William Taylor is managing the New Liskeard store.

"Eastlake" Metallic Shingles will surely interest your neighbor who has just had the wood shingles on his roof ripped off by lightning.

No wise man will ever want to use wood shingles again when the lightning, fire, rust and storm-resisting qualities of "Eastlake" Metallic Shingles are once made evident to him.

All around you new buildings are going up and old ones being repaired. Why let other dealers supply the shingles etc., when the trade, at a good profit, is yours if you will go after it and show people who have given the matter little thought the advantages of "Metallic" building materials over wood?

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (stone, brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

401

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Sept. 8, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

MONDAY being Labor Day there was some interruption in the week's business, but the turnover of general hardware and building supplies is still very large. The trade are buying liberally.

* * *

The Manitoba Iron Works have secured a contract from the Winnipeg Oil Co. for the erection of a large oil tank of 50,000 gallons capacity. The tank will be installed in November. The large water tower being installed in Portage la Prairie by the Manitoba Iron Works will be completed by the end of September.

* * *

Screen Wire Cloth—Very little selling now. The price is still $1.55 per 100 square feet.

Poultry Netting—Prices are as follows for the 2-inch mesh in No. 19 gauge:

PERSONAL AND TRADE ITEMS.

Montreal.

Mr. R. G. Lee, of Fredericton, N.B., was in Montreal on business during the past week.

Mr. C. F. Comer, hardware merchant of Calgary, spent a few days in the city this week.

Mr. Geo. Boyd, of the Montreal Rolling Mills Co., is spending his vacation at L'Achigan.

Mr. J. W. Dowling, of Caverhill, Learmont & Co., is again on duty after an enjoyable vacation.

Mr. Jno. A. Burns, B.Sc., of Munderloh & Co., has returned from his vacation, which he spent at the seaside.

Mr. Benjamin Rogers, general merchant of Alberton, P.E.I., paid a visit to local hardware jobbers this week.

Mr. W. H. Evans, of the Canada Paint Co., returned this week from Prout's Neck, where he spent a very pleasant vacation.

Mr. J. N. Atthill, of W. & T. Avery, Limited, weighing machinists, Birmingham, Eng., sailed for home on the Victorian last week.

Mr. Paul R. Hanson, manager of the Montreal branch of the Canadian Rubber Co., has returned from a successful business trip to Ottawa.

Mr. D. Lorne McGibbon, general manager of the Canadian Rubber Co., Montreal, has returned from a vacation spent at Kamebunk Beach.

Mr. E. A. Chollette, formerly manager of sales with the Canadian Rubber Co., has accepted a similar position with the Gutta Percha & Rubber Co.

Mr. Matthew Moody, of the Matthew Moody Co., Limited, agricultural implement manufacturers, Terrebone, was in the city on business during the week.

Mr. Jas. R. Wilson, vice-president and managing director of the Thos. Robertson Co., Limited, metal merchants and dealers in plumbers' supplies, sailed for the Old Country on the Victorian, but

NEW CATALOG JUST ISSUED.

returned to the city when the liner went aground. He took passage on the Bavarian, however, sailing Friday. Mr. Wilson's father is seriously ill in the Old Country.

Mr. W. B. McLean, B.Sc., of the firm McLean & Sophus, machinery merchants, 301 St. James street, has returned from an extended business trip to the Maritime Provinces.

Mr. C. C. Fee, lately advertising manager for Lawrence A. Wilson, wholesale wine and spirit merchant, has accepted a similar position with Lewis Bros., Limited, and entered upon his new duties the first of the month.

Mr. F. S. Eaton has been appointed manager of publicity and systems for Munderloh & Co.'s electrical department. Mr. Eaton is conversant with printing and publishing, and no doubt will prove an acquisition to this successful house.

Mr. B. Fowler, son of Mr. Josiah Fowler, the well-known axe and tool manufacturer of St. John, N.B., was in town last week. He was accompanied on his calls upon the trade by his capable representatives, the Messrs. Canavan, who have developed an excellent trade for their goods. Mr. Fowler has gone west to Sudbury, and will return shortly via Montreal.

Mr. F. L. Benedict, secretary of the Leeming-Miles Co., Limited, manufacturers' agents, Notre Dame and St. Lambert streets, has resigned his position to enter into business on his own account. Before leaving his old position he was presented with a handsome gold watch and an address by the management and employes of the firm. All the friends of Mr. Benedict will join with us in wishing him every success in his new undertaking.

The well equipped premises of the Canadian Hardware Co., on DeBresoles street, are fast getting into shape. The arrangements for serving the trade are about completed, and shortly a full announcement is promised in these columns. Messrs. A. Prudhomme & Sons, whose name appears on the brass plate of the main entrance, are known for the probity and progress of their business methods for the last quarter of a century. No doubt this record will be maintained in even greater measure.

President Jas. Hall, of the Halifax Board of Trade, was in Montreal last week on his way to Toronto. When seen at the Windsor Hotel Mr. Hall expressed the opinion that the Atlantic mail service should not be divided between two companies, which is said to be the Government's plan at present. The business men of the eastern sea port are almost unanimously in favor of granting the contract to the company with the fastest steamships. He also suggests that the I.C.R. be so improved in roadbed, bridges and motive power as to make possible an eighteen-hour mail and passenger service between Halifax and Montreal.

Toronto.

Mr. Dowswell, of the Dowswell Mfg. Co., Hamilton, spent a few days in Toronto this week.

Mr. Moore, of Moore Brothers, plumbers and steamfitters, Bradford, visited Toronto this week.

Mr. George Kerr, of the Kerr Engine Co., Walkerville, was a visitor in the city during the past week.

John Grills and son, of New Liskeard, hardware and general merchants, were visitors at the Toronto Exhibition during the week.

Mr. Fitzsimmons, of Fitzsimmons Brothers, plumbers and steamfitters, Hamilton, called on Toronto plumbing supply houses this week.

Mr. R. H. Lear, plumber, Winnipeg, is in Toronto this week as the guest of his brother-in-law, Mr. W. H. Meredith, secretary of the Master Plumbers' Association.

Mr. J. Marshall, one of Port Arthur's leading master plumbers, visited Toronto this week. He reports trade as very brisk in the growing towns at the haed of the lakes.

Mr. B. Werner, plumber, Innerkip, called on Toronto supply houses during the week, and left some good sized orders for early shipment. The demand for modern plumbing is increasing in the farming districts.

Mr. Hugh Labatt, of the Canada Brass and Supply Co., London, spent a few days in Toronto this week. Other Londoners connected with the plumbing trade who were noticed in the city were Messrs. James Hazlett and Ben. Noble.

Mr. C. Gurney, of the Gurney Foundry Co., is making a combined business and pleasure trip to the Pacific Coast cities in company with Mr. C. J. Furlong, Toronto. The Lewis and Clark Exposition at Portland will be visited before returning east.

Mr. J. O. Thorne, general manager of the Metallic Roofing Co., was in Winnipeg last week arranging for the establishment of a branch for their western trade. A factory will be erected to supply all the stock required in the west and 25 men will be employed. Mr. Thorne is an old timer in the west, having gone west in 1879, and again as a volunteer in the Rebellion of 1885. He will visit Calgary before returning east, his family accompanying him on the trip.

Amongst the paint dealers who visited Toronto during the past week, and called upon local supply houses, were the following: J. B. Filsinger, Southampton; G. A. Richardson, Guelph; A. Outram, Port Hope; F. J. Brock, Cope & Johnston, Fort William; Mr. Baxter, Nevereux, Clinton & Baxter, Windsor; H. N. Huehn, Heidelberg; Mr. Woodman, D. Brocklebank & Co., Arthur; W. McGladrey, Parkhill; R. McGowan, Uxbridge; Mr. Dewar, Milton; D. A. Fraser, Norwood; F. Otton, Barrie; D. L. Myers, Stratford; Wm. Neal, Walton; Fred. Haney and wife, Strathroy; L. Wright, Strathroy; Chas. Wright and family, Strathroy; J. B. White, Port Hope; C. E. Noble, Dundalk, and Clarence Race, Port Hope.

Amongst the hardwaremen from Ontario points seen in Toronto during the past week Hardware and Metal noticed the following: Fred. Smith, Gore Bay; D. Atcheson, Stouffville; J. Skelton and Mr. Lundy, Skelton & Lundy, Palmerston; M. Wichel, Wichel & Son, Elmira; Jas. White, the Nelson Hardware Co., Windsor; W. L. Trotter, Sheguiandah; Jas. Clark, Brechin; Frank Childs, Gravenhurst; R. J. Bruce, Port Perry; F. and C. Bales, Oshawa; Mr. Chown, Jr., Belleville; E. Pollard, Petrolia; M. A. Gendron, Penetanguishene; Geo. Davies, St. Thomas; S. A. Boulter, Niagara Falls; R. H. Appleyard, Humberstone; J. King, Chatham; Harry Johnston, Millbrook; F. W. Reynolds, Bethany; H. Moxon, Perth; E. Braund, Aurora; Mr. Summerfeldt, Mount Albert; Hugh and Ed. Cleland, Cleland Bros., Meaford; Mr. Mitchell, H. Clemens & Co., Guelph; Ed. Fenn, Bracebridge; T. J. Sims, Little Current; G. H. White, Orillia; D. McNab, McNab Bros., Orillia; J. W. McDonald, North Bay; Wm. Ough, Aurora; W. J. Bell, Beeton; B. Warnock, J. Warnock & Co., Galt; W. A. Rankin, Ottawa; F. A. Cote, Sudbury; F. G. Marshall, Orangeville; W. A. Proctor, Sarnia; D. Butchart, Owen Sound; A. Butchart, Lakefield; T. Batty, Norwich, and A. Wright, Hamilton.

Elsewhere.

W. M. Pringle, hardware merchant, Whitby, is building a new residence.

The Arcade Hardware Store, Forest, is to occupy quarters in a new $8,000 block now being erected.

L. Dougherty, of Messrs. Silvester & Dougherty, Stouffville, is spending his holidays visiting Mr. R. R. Gamey, M.P.P., at Gore Bay. Mr. Dougherty's family accompany him.

W. S. Piper, hardware merchant of Fort William, has been making considerable improvement in his store, an addition being made owing to the steady increase in his business.

REMOVING PAPER FROM WALLS.

STEAM as a means of removing old wall paper is a novelty which is just being placed on the market. Many devices for this purpose have been worked out, but few of them have stood the test of trial. In the present instance the steam is generated in a boiler by means of a gasoline burner, and applied to the wall through a hood in the hands of a workman. The connection between these parts consists of a rubber tube.

In the making of a contract for papering the paper hanger is always more or less in the dark, because he cannot calculate with any certainty on the amount or the tenacity of the old paper to be torn or scraped from the wall. He may base a calculation on a single or double covering, but when the workmen commence to scrape they may find half a dozen, which means that the work of removal will be very slow and laborious. The processes generally followed are tedious. In some cases the paper hanger merely tears away the portions of the old paper which are loose, thus leaving an uneven surface. In others water is sprinkled over the surface by means of a sponge, but it is necessary to wait until it has soaked in. Results are slow and somewhat incomplete, as the application of moisture is not uniform, and the paper is removed only in parts.

With the new apparatus alluded to, after a steam pressure is obtained within the boiler, it is merely necessary to hold the hood to the wall a short time, when the paper peels off easily under the action of the workman's plow.

The outfit is not too large to be easily portable. The gasoline tank holds a sufficient quantity of fuel for half a day's operation, while the water tank holds four gallons, sufficient for the same period of work. The time of steam application varies with the amount of paper on the wall. Ordinarily, it is said that a few seconds will penetrate a dozen coverings of paper, one over the other. The claim is also made that it is hygienic, the heat of the steam killing germs and vermin. This would depend, of course, upon the length of time the application of the steam is kept up. — Upholstery Trade Journal.

Humbug In Selling Horse Nails.

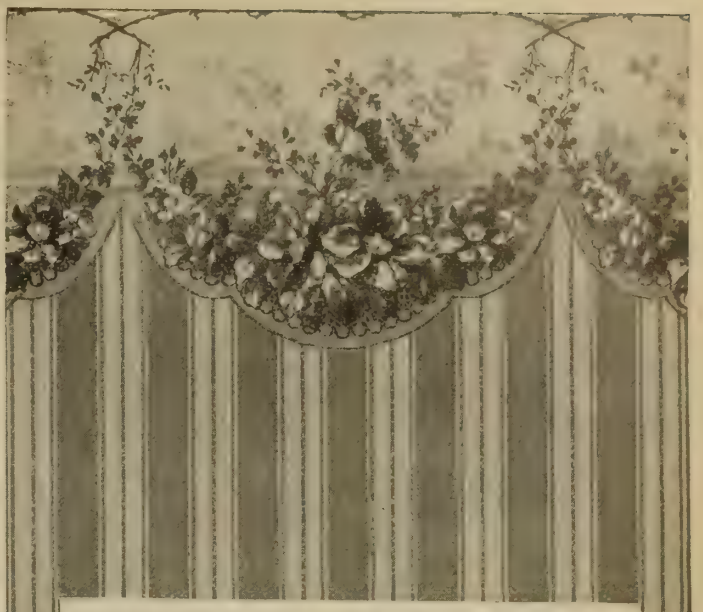
Abe Lincoln was about right, when he expressed his opinion of "Humbug" in this oft-quoted saying :—"You can fool all the people some time, and some people all the time : but you can't fool all the people all the time."

"Humbug" has been a feature in disposing of, and in statements made regarding some kinds of Horse Nails sold in Canada. For example :—a certain manufacturing firm hailing from the United States, have been pushing the sale of their second grade Horse Nails in this market for some time. This particular brand of nails is sold in the United States at one half the price of their regular goods, and is recognized by the trade as a competitive low-priced nail. The inference may safely be assumed that they are only one-half as good. And yet some of our Canadian buyers are led away by a little "Humbug" to pay more for this second grade brand than for the old reliable "C" brand, **made in Canada by Canadian labour for forty years from the best material known or used in the world for making Horse Nails —Swedish Charcoal Steel.**

How is it done ? We will let you into the secret. **By cutting the price in the small sizes, of which small quantities are sold, and increasing the price of the staple sizes, of which the largest proportion is sold.** For example :—Take size No. 4, and our experience shows that for every pound we sell of that size, we dispose of 100 pounds of No's 8 and 9 combined. **You therefore buy in the same proportion.**

Just see how this proportion works out :—

We sell "C" brand First quality. Per box					They sell "Black Prince" Second quality Per box	
@ $6.00	$24.00	4 Boxes, 100 lbs.,		No. 4.	@ $4.00	$16.00
@ 2.75	605.00	220 " 5,500	"	No. 8.	@ 3.00	660.00
@ 2.50	450.00	180 " 4,500	"	No. 9.	@ 2.90	522.00
	$1079.00	10.000	"			$1198.00



Difference in favour of buying "C" brand for every 10,000 lbs., or 400 boxes, $119.00, say 30c. per box.

Don't fool yourself by thinking "Yankee Doodle" is giving you small sizes at cut prices without getting it out of you.—That is only a little "humbug" in selling Horse Nails to the unsophisticated Canadian. **Moral:—Buy the old reliable "C" brand. Pay a fair price, and get the best, and "Made in Canada."**

PAINT, OIL AND BRUSH TRADES

PACKING WHITE LEAD.

PASTES of white lead and oil are singularly liable to change, which may begin almost as soon as the paste is made, and if it goes too far, may make the ready mixed pigment quite unusable. Everyone accustomed to oil colors knows that they become covered with a tough, leathery skin on exposure to the air. If the paint is then stirred the skin breaks up, but does not again combine with the rest of the mass. If then the stirred paint is applied by a brush, bits of the broken skin are left here and there, and no uniform coating of the surface is possible. No one seems to know exactly of what this skin consists. All we are sure of is that it is the result of the action of atmospheric oxygen on the oil in the paste, and that it cannot be regenerated.

To prevent as far as possible the formation of this skin the mixed paint must never be exposed to the air, and it must be mixed without any entanglement of air bubbles. In storage the paste must be securely casked in sound strong casks, which must be quite filled so as to avoid having any air space under the cover. It is obvious, too, that the casks must be airtight. A single crack will let in sufficient air to spoil the contents of the cask very rapidly. These desiderata can only be met by having good sound casks, and by having as many different sizes in stock as possible. White lead varies so greatly in density that a barrel which will be exactly filled with 60 lbs. of one brand of the pigment will perhaps barely hold 50 lbs. of another make of white lead. The cask should be painted inside to prevent the air getting at the white lead through the pores of the wood, and also to prevent the wood from sucking the oil out of the paint. At least two coats of paint, preferably white lead itself, must be given to the inside of the cask. The first coat must be quite dry before the second is applied, and the second must be dry before the cask is filled. Care must be taken that no iron nails with which hoops or the head of the cask are fixed on go right through, for wherever the paste comes into contact with iron it will turn yellow and become useless as a pigment. Iron drums must be painted or varnished inside if used for the storage or transport of mixed white lead, and no paint or varnish can be used which will injure the purity of the color of the white lead. If the drums are painted outside to protect them from the weather, care must be taken during the process that none of the paint gets inside the drum. The outer paint is nearly always colored, and such, of course, cannot be allowed inside the drum to spoil the color of the lead paint afterwards put in. A cask or drum filled with white lead should be carefully handled to prevent any leaks being caused. Once it has been opened for the withdrawal of part of its contents, the paint remaining should be covered with water to keep it from the air and so prevent the formation of any skin. Even with the greatest care in this respect it is extremely difficult to prevent skin formation if the drum or cask is being constantly opened to take out small quantities of the paint, and the consequent depreciation in the value of the article must be taken into account. Much may be done, of course, to avoid this source of loss by packing the mixed white lead in receptacles of proper size. Thus, a person who sells or uses a pound or two at a time should be able to purchase his mixed white lead in small casks, which will soon be emptied, while the larger dealer or user can purchase it in larger vessels. Once a mixed white lead pigment has made much skin the only thing to be done is to put it through the color mill, so as to break up the skin into as small pieces as possible, and to distribute them evenly, and then to mix the stuff with a much larger quantity of fresh paint.—Oil and Colourman's Journal.

CURDLING OF VARNISH.

THE term curdling is applied when the mass of varnish in bulk gelatinizes, or assumes a partially solid consistency, and when varnish added to paint breaks up into clots instead of becoming evenly amalgamated. The phenomenon is not by any means uncommon, and deserve some attention. In the first form of curdling noted above, that in which the whole mass of varnish sets to a solid or semi-solid mass, excess of driers in the varnish is usually the cause, and it is therefore, as a rule, varnishes of the kind known as "hard drying" that usually exhibit the fault. Thus, hard church oak varnish, or a hard cheap oak varnish, is sometimes found to become quite gelatinized even when packed in tins away from the air.

The addition of varnish containing resinate driers, or of terebine containing the same ingredient or adulterated linseed oil, very often causes curdling. Certain oils, such as colza, which from time to time find their way into paint oils, greatly induce curdling under such conditions. Curdling, then, may be considered a sort of finger post indicating that things are not as they should be, but whether the fault lies in the varnish or in the materials that have been mixed with it should be the subject of careful investigation.

PAINT AND OIL MARKETS

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, September 8, 1905.

LAST week's prices hold good in all cases, no advances having been made on any lines listed by us. Turpentine is very firm in the south and stocks are light on the local market. While higher prices are possible, we still quote the same figures as in last week's report.

Linseed oil is weakening in response to the eastern markets where lower prices are quoted. The scarcity of goods on the local market, however, has prevented the decrease here. Canadian crushers are preparing to put their mills in operation, and Canadian oil will probably be available about the end of the month. If prices continue low it is probable that the Canadian product will be held for sale later on at higher prices.

Gum shellac is quoted at an advance of about 10 to 20 per cent. and higher prices are looked for in shellac varnish.

White lead is also likely to advance. The time for bringing in stocks, ordered at the low figures prevailing before the recent tariff changes, has practically come to an end. After the advance following the increased duty, there was a slight reaction, but it is almost certain that the market will strengthen again during the coming month. An incident which will aid and bring about higher prices is the loss of the steamer Virginian of the Leyland line, the wreck occurring in the St. Lawrence River below Quebec. A heavy cargo of white lead and glass were carried and the loss of these and the inability of the white lead importers to replace the shipment at the low prices prevailing during the Summer will make for higher quotations.

The loss of several large shipments of glass on the Virginian taken in connection with the scarcity of goods on the Canadian market is also likely to bring about higher prices. The season for an increase demand for glass has now arrived, and no relief is expected from Europe, prices are likely to become very firm, and jump upwards during the Fall.

White Lead—Ex Toronto, pure white $5.50; No. 1, $5.02 1-2; No. 2, $4.65; No. 3, $4.40; No. 4, $4.15 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white, $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 51c.; boiled, 54c.; 5 to 9 barrels, raw, 50c.; boiled, 53c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrel, 92c.; 2 to 4 barrels, 91c.; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Prospects for a good Fall trade are excellent. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass— Glass is very firm at present prices (see current market quotations), and an advance is expected.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, September 8, 1905.

GENERAL business is somewhat easy, as is usually the case during the Fall fairs. Letter orders are more frequent than travelers', as it is understood that travelers have not been calling with their customary regularity, owing to the fairs now in progress.

Prices in all staples continue very firm—we might almost say with an upward tendency. All lead products appear to be on a strong footing, and the market generally is in a very healthy

T 3 1905
Montreal
Book 41
page 17

condition. Prospects for the autumn trade are particularly bright.

Turpentine has gained additional strength during the week and shows an advance all around of 1c. per gallon. Linseed oil is again weaker, and our quotations give a dropping off of 1c. Shellac varnish is still at our last week's quotation, though an advance is imminent owing to the better prices commanded by the raw materials.

Turpentine—Strength in the west is now reflected in the eastern market, as is shown in the appended price list: Single barrels, 90c. per gallon. Two barrels or over, 89c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Another drop has occurred, the price now quoted being one cent lower than we gave last week. Current quotations are: Raw, one to four barrels, 48c; 5 to 9 barrels, 47c.; boiled, 1 to 4 barrels, 51c.; 5 to 9 barrels, 50c. f.o.b. Montreal. Net 30 days

Ground White Lead—Firmness is the feature of the market Inquiries are being received from all parts of the country for all lead products. We quote: Best brands Government standards, $5.35 to $5.50; No. 1, $5.10 to $5.25; No. 2, $4.75 to $5.00; No. 3, $4.50 to $4.75, all f.o.b. Montreal.

Dry White Lead—Shares in the general activity of the lead market. We still quote: Barrels, $5.25; one hundred lb. packages, $5.50; six or ten-lb. tins, $6.50.

Dry White Zinc—No change has been reported since our last issue. Our quotations are as follows: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (ground in oil)—We can only say that the volume of business is quite satisfactory to all the manufacturers. We give the following prices: Pure 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—We still quote the same prices as last week. Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral — Our prices are as follows: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c. smaller quantities, 8 1-2c.

Red Lead—Last week's conditions are still ruling the market. We give the following prices: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—The advance made by some firms last week has not yet been followed by all manufacturers. Our prices are as follows: Pure white in barrels, $2.30 to $2.50; pure orange $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—The demand is very fair for the season. We give the following prices: From $1.20 to $1.40 per gallon.

Castor Oil—The advance recently made in this article has held firm, and the market at present is described as being very strong. Figures generally quoted are: 8 1-2c. to 9 1-2c. according to lots.

Refined Petroleum—Business is picking up daily as the season is advancing very rapidly. No change in prices has yet occurred, but the market is gaining strength and an advance is considered not unlikely.

WINDOW GLASS—MONTREAL.

Local importers are in a worse position than ever owing to the grounding in the lower St. Lawrence of the Leyland liner Virginian, which had a considerable quantity of glass in its cargo. This consignment, if it had reached Montreal, would have relieved the situation somewhat, but, as it is feared that the steamer is a total wreck, we cannot report any improvement in Montreal stocks. No further news has been received from Belgium concerning the threatened strike. Prices are unchanged as follows: First break, 50 ft., $2; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 feet, $4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

FOREIGN LINSEED MARKETS.

IN sizing up the foreign linseed and oil markets the Paint, Oil and Drug Review of recent date says: The depression in the foreign linseed oil market seems to be due to the fact that large buyers there are well supplied, and that they will not take on oil now except at bargain prices. Seed and oil in London market are not on a parity of values. Seed is selling at about $1.16 per bushel, while oil is weak at about 30 cents per gallon. This puts their seed market a few cents above our October market, while their oil quotations are fully 7 to 8c. below our oil futures. Our tariff of 25c. per bushel on seed would put the imported seed at $1.40 per bushel with freight and port charges additional. The duty on oil is 20c. per gallon, which, added to the foreign price, would put oil into our markets at upwards of 50c.—a clear impossibility. Hence there is no outlet in this direction for oil or seed from England.

English and Continental oil buyers are now accustomed to take on very large quantities of oil at times, when prices are low. They "stock up" on a favorable market—a custom which does not prevail in this country to the extent that it does there. The American oil buyer takes his oil on contract, to be

delivered as he needs it. He will not store any great quantity if he can avoid it, because the risk of leakage and loss counteracts any advantage he might otherwise gain by heavy purchases. But in Europe there seems to be no limit to the amount of linseed oil the trade can absorb, at a low price. And, per contra, when prices are not specially attractive, oil buyers avoid the market. Just at present this attitude on their part is indicated by the lack of life in the oil trade as reported from the Hull and London exchanges.

It is probable that the coming year will see some interesting developments in seed and oil abroad, for the seed supply is none too abundant, and the oil demand is not likely to be correspondingly curtailed. The present depression in the oil trade is not an unusual occurence, as the course of those markets is not infrequently from one extreme to another. Low prices and lack of interest are followed by hardening markets and heavy buying as a natural reaction.

PAINT REMOVERS.

A GOOD paint remover in paste form can be made by mixing a solution of one pound caustic soda, and one pound pearl ash in one gallon of hot water, with starch and china clay, in equal proportions to the consistency of stiff paste, says an exchange. The starch causes the remover to set to a jelly on cooling. Work treated with these alkiline paint removers must always be carefully washed down before painting. Sometimes it is necessary to wash down with vinegar and water to "kill" the alkali which, if left, is sure to eat through and injure the paint. Paint and varnish removers of a spirituous nature are usually composed essentially of amyl alcohol or of fusel oil which contains a proportion of this alcohol. Amyl alcohol possesses the property of readily dissolving oils and gum rosins, and hence, instead of removing these materials by a process of saponification, as is the case with the alkaline removers, the spirit removers actually dissolve, or at least render soft and pulpy, the hardened oil and gum. Other ingredients of the spirituous removers are coal-tar benzine, acetone nitro-benzine and light hydrocarbon oils. Many of these preparations, however, are protected by patent rights.

THE WEST INDIAN TRADE.

WHILE we, as Canadians, are proud of our country and are firm believers in its future, yet we must acknowledge that there are some things which we lack, the possession of which would be most desirable. The United States, to the south of us, are self-contained. From the wheat fields of Minnesota and Dakota, to the cotton fields and rice fields of Alabama; from the orchards of Oregon to the orange groves of Florida; from the forests of Maine to the fruit lands of California, the country is productive of every possible article that a civilized human being can require. And where the United States fail to supply any known want, their over-seas possessions fill in the gap. Can the same be said of Canada ?

Desirable as it would be to be able to record that Canada is capable of supplying all her own wants, this is impossible under existing circumstances. True, we have an immense variety of products in boundless supply, but it must be remembered that the southern boundary of the Dominion lies far north of the tropics, and all the products of the tropical belt are denied us. To fill in this gap in the case of Canada, what could be more natural than to have recourse to our nearest sister colonies—the West Indies?

Geographically, Canada is not so far distant from the British Islands of the West Indies as one might be inclined to suppose. As compared with her distance commercially from Great Britain, the position of the West Indies is highly favorable to the development of a successful trade. Where it takes six weeks to get an order filled in England, it only takes three or, one-half, that time, to get an order filled in Jamaica. This is comparatively quick work.

The sentiment in the Indies, as voiced by travelers who visit the Islands, and by Islanders who come to Canada, is extremely favorable towards a closer political and commercial connection between the two colonies. At present trade is carried on principally with the United States, whilst the trade with Canada is nominally small. But the possibilities for a great expansion are there, and with proper cultivation there should be a considerable growth in the volume of products exchanged.

Perfect Interior Lighting

by daylight enhances the value of property, and is, therefore, a good investment. This can be obtained solely by the use of

MAXIMUM LIGHT GLASS

the only daylight-increasing window glass combining lenses and prisms. One installation at the cost of a few dollars does away with the use of gas and electric lights in the daytime; so it will be seen this glass is economical, as well as hygienic. You could carry a stock of ***Maximum Light Glass,*** and through our instructions, give demonstrations of its efficacy and so get business. Will you write for sample and instructions how to test ?

HEATING AND PLUMBING

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

By M. J. Quinn, Mechanical Superintendent for the Ontario Government.

[Registered in accordance with the Copyright Act]

Article XIV.

THE "OVERHEAD" SYSTEM OF STEAM HEATING.

As was said in the beginning of this series of articles, the character of building in which a heating system is to be installed must be the only guide for the heating engineer in making a choice of a system which will give uniformly good results under all circumstances and conditions, and for that reason he must in some cases be very sure of his data, before coming to a final conclusion.

Take for example the building illustrated in figure F, in which is shown an overhead steam piping system, the essential feature of which is that the steam main, instead of running through the basement, rises at once to the highest point in the building, viz., the attic, where it connects to a system of "drops," which supply the radiators with steam and also conduct the condensation from the same to the return main in the basement, which, as will be seen, connects directly with the boiler.

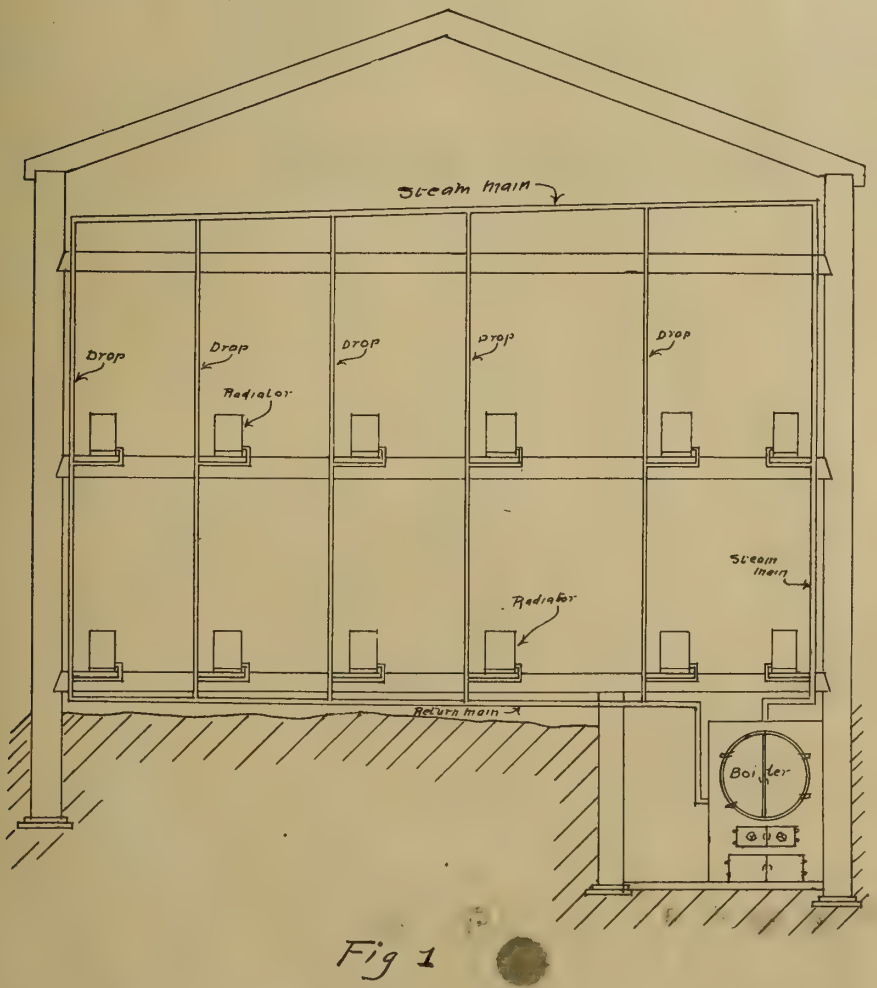

Fig 1

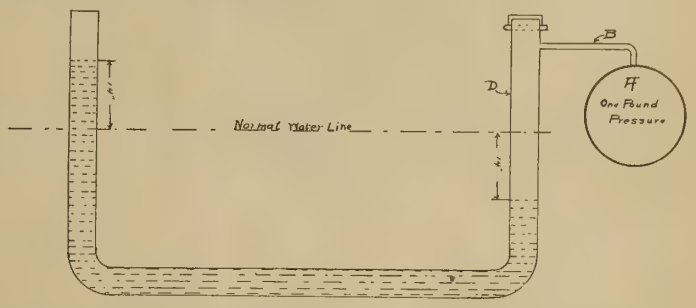

Fig 2

Now, the question will naturally be asked, why cannot the steam main, as well as the return main, be carried in the basement, or at least under the ground floor, as well in this building as in that in which the "two pipe gravity return system" was shown, and it is the purpose of this article to give an answer to that question and to illustrate the exact physical conditions which would prevent the "two pipe gravity return system" from working successfully, and as a proper understanding of these conditions seems to us to be of the utmost importance, the reader will pardon us if we take what may appear at first a long road to reach a nearby point.

Referring then to figure E, we have an illustration of a length of pipe (of any size or length) turned up at each end, the end marked "D" being capped tight, and being connected by pipe "B" to cylinder "A."

Now under normal conditions the water in both ends of pipe "D" would assume the same level at the line marked "normal water line."

Assume, however, that a small air pump is connected to cylinder "A," and a pressure of one pound to the square inch is exerted, not only in the cylinder, but through the pipe "B" to the surface of the water in pipe "D"; the result must be as indicated in the drawing, that the water must sink in one leg and rise in the other, until the difference between the two levels produces a pressure due to head, equal to that exerted by the air under pressure, and it will be obvious that a difference in level must continue to exist as long as there is more pressure on the surface of the water in one leg than on that in the other.

That point having been made clear, then let us consider the drawing, figure 3, where we have the same result, due to unequal pressure, though brought about by slightly different conditions.

In this illustration the pipe "D" is connected to the cylinder "A" at the bottom of same, and from the top of "A" to the top of "D" is connected a small pipe "B," in which there are three leaks, "C," "C," "C," through which the compressed air is escaping.

Now assuming that a pressure of, say, five pounds to the square inch was exerted in the cylinder "A," and consequently up through the pipe "B," and that by reason of the loss of one pound press-

ure, due to the leaks, the pressure of air in pipe "B," where it connects with "D," would be only four pounds to the square inch, it will be plain that the difference in level between the water in "A" and that in "D" will be the same as that in figure 2 or about 28 inches, and the water in "D" will rise and fall just as the difference in the pressure between one end and the other is increased or decreased.

To come to the point, then, let "A" in figure 2 represent the steam boiler, let "B" take the place of the steam main, and "D" that of the return, and

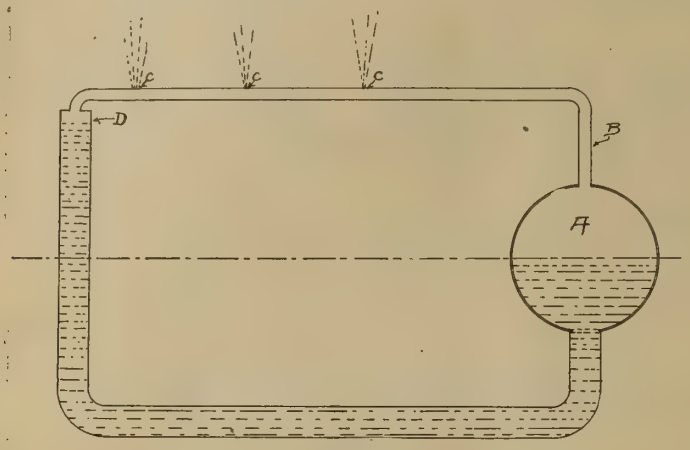

Fig 3.

let the leaks "C" "C" "C" represent the steam necessary to supply three radiator connections. A little thought will convince the reader that the pressure will be somewhat reduced after passing the first "C," still further reduced after passing the second "C," and will be at its weakest point after having passed the third "C," when it joins with "D."

Now as the pressure in the boiler "A" is constant, and is exerted in all directions equally, it will be plain that when it is pressing up through the steam main with a pressure of five pounds to the square inch, that it is also pressing down through the return main with the same pressure, and, if the pressure at "D" is reduced below that in the boiler, because of the steam taken to supply the radiators, then it follows that the water level in "D" must always be higher than that in the boiler, and hence, where there is not room under the ground floor, as in figure 1, to place the return main some distance below the steam main, we must use the overhead system, or have unsatisfactory results such as those indicated in figure 4, where an attempt is made to successfully run both pipes in a contracted passage.

In this case, the return main, of necessity, being close to the steam main at the end furthest away from the boiler, has overflowed into the latter up to the level indicated by the arrows, and marked "level to which main is flooded" and as the water has risen into at least two of the risers, they will be entirely cut off from a supply of steam, except that which, under a high pressure, may be forced through the water in the main, causing the "pounding" in the pipes, which is the bane of the life of the owner of a system with such defects in it.

It will, we hope, be plain, then, that the principal value of the overhead system lies in its adaptability to buildings where there is not room under the ground floor to run both the main and return, with a proper distance between them, or where the ceiling of the basement is not a sufficient height above the water line in the boiler.

A MODERN FILTRATION PLANT.

By James G. Fernald, L.H.D.

MODERN methods of filtration, like all that is best in scientific attainment, reach their result by closely copying nature. They build on a vast scale subterranean sand-beds, where the gathered water percolates through into the city mains, as it does by natural process into the deep well or the mountain spring.

Of the way in which this is done, the filtration plant now in course of construction at Washington, D.C., the second largest in the world, is a good illustration.

The water is drawn from the Potomac River above Great Falls, at a point 14 miles from Washington, whence it is brought to the city through a circular conduit of brick, which is 9 feet in diameter, and has a fall of 9½ inches to the mile. President Washington estimated that the city which he planned would require 8 million gallons of water daily. The present aqueduct has a daily capacity of 75 million gallons, and engineers are urging the immediate increase of this supply by paralleling the existing conduit with another of the same dimensions.

After entering the conduit at Great Falls, the water flows 9½ miles to the Dalecarlia reservoir, which has a capacity of 150 million gallons, and was originally constructed by the damming up of the Little Falls branch of the Potomac, and which is entirely without lining of stone of any sort. Thence the water passes through a similar conduit for a distance of 1.1 miles into the old distributing reservoir, which has a total capacity of about 151 million gallons, and has paved slopes—it also being divided into two basins containing 98 million gallons and 53 million gallons respectively. Thence the water passes into the Washington city tunnel, commonly known as the Lydecker tunnel, which is 3-9 miles in length, to the Washington city reservoir, which has a total capacity of 300 million gallons. This, in addition to the Reno reservoir, and the Brightwood reservoir, gives a total storage of 635 million gallons, or about 9 days' supply, assuming 75 million gallons daily consumption.

The water as it now comes from this reservoir into the homes of Washington is often so muddy that one hesitates even to wash in it. Yet this is the water that Washington is compelled to drink. Many persons, of course, buy spring or other bottled waters. But these cannot be used for cooking on any great scale. So the people are fain to use the muddy hydrant water and hope for the best. Worse than the mud, however, are the unseen germs which the scientist's microscope discovers. In fact, the muddy water is the purest. It is after rains or freshets, when a flood of fresh water has been poured into the river, that it comes down charged with earthy matter and looks so forbidding. But in quiet times, when animal and vegetable matter decays on the banks and is washed into the stream by occasional showers, or blown upon its surface by the wind, the clear water may be and often is much more fully charged with dangerous microscopic life.

The filtration plant that Washington is building to meet the city's need covers

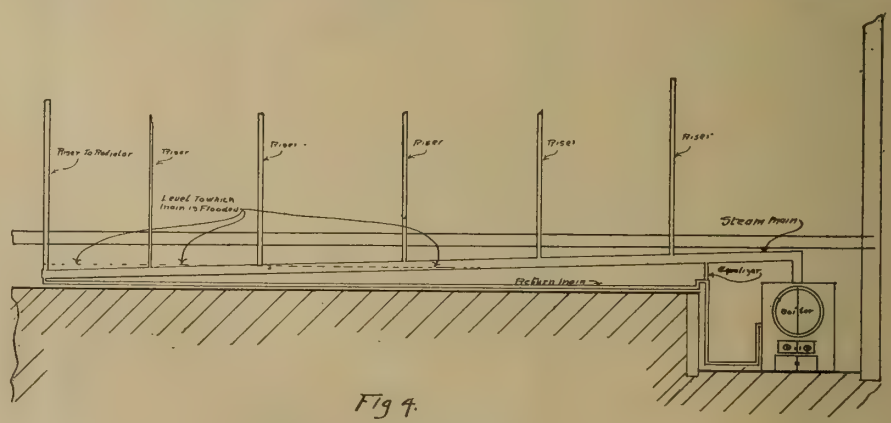

Fig 4.

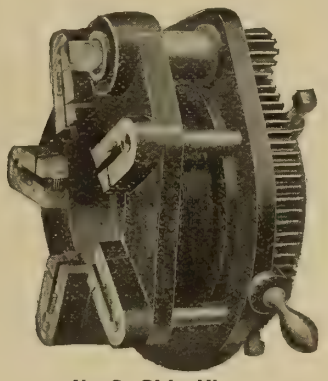
29 acres, each acre a separate unit or section of the system.

As you stand at the southern gate of the Soldiers' Home and look southward toward the city, you see great fields covered with rows of small circular ridges looking like corn fields, with the hills rather large and rather far apart, and without the growing corn. Those circular ridges are the rims of the manholes that let light and air as needed into the filter below. These manholes are 3 feet in diameter and 28 feet apart, and are guarded with double covers, so that they may be opened or closed as occasion de-

Ramsay's Creosote Stains



These Stains are becoming more popular every day. Have you seen a set of our samples? If not, why not drop us a card to-day and ask for prices and samples? You may require these any day. Many buildings will call for Ramsay's Creosote Stains this Fall.

Montreal Toronto Vancouver Winnipeg

mands. The filters are built in double lines, intersected by depressed roads, on which great double gates open, through which the filter may be entered for cleansing purposes at suitable times. Long aisles stretch away between rows of pillars.

As you look down at the floor of the partly completed work, you see that the groined arches overhead are repeated there inverted.

At the apex of many of these inverted arches may be seen openings leading downward, which are to carry the collected water after passing the filter into 2-foot mains that run under the floor. Lines of split tile with uncemented joints are laid with the convex side upward across the unpierced arches to reach these openings, along which the water will find its way as it does through a tile underdrain in a wet meadow.

Over the floor thus prepared is spread one foot of fine washed broken stone, and above this fine, clean sand is laid 4 feet deep. When this has become thoroughly settled, water will be let in from the pumping house with even flow till it reaches the depth of 4 feet above the sand, at which depth it will be maintained with unvarying accuracy by an automatic apparatus in the pumping house.

The filling of the filter is a very nice undertaking. It must be filled backward. When the broken stone and sand are well packed, water is let in through the mains underneath, and allowed to soak up gradually through the mass till the whole is thoroughly wet. By this slow absorption the sand is evenly moistened and firmly packed together.

Then the water may be let in over the top. But even then it is not allowed to flow directly upon the sand lest it disturb the surface and start a washout, which the water will wear more and more, going down through it in a stream unfiltered, instead of working its way through drop by drop. So the new water is let in behind a detaining wall, the top of which rises just 3 inches above the surface of the sand, so that the incoming water flows slowly and evenly over upon the sand.

Here then we have the subterranean waters in cool dark chambers under the earth, slowly trickling down through fine, clean sand, the nearest artificial reproduction yet attained of nature's great filter that supplies the wells and springs.

The whole vast structure is built of concrete, which is really artificial stone, prepared by mixing 1 barrel of cement with 11 cubic feet of sand and 19 cubic feet of broken stone or gravel. It has been found that an arch of concrete so prepared will bear practically any weight that can be piled vertically above it. These arches are of 14-foot span, the concrete being 6 inches thick at the crown of the arch.

A visitor to the filtration plant sees vast piles of wooden forms of various shapes lying ready to be carried where they may be put in place to have the concrete masonry formed upon them. The work is necessarily slow, because the concrete is so thinly spread over so vast an area. The forms must be carried by hand from point to point, a dozen or fourteen men carrying one form, and carrying it no faster, of course, than a man can walk, to the place where it is to be set up. After the concrete has hardened, the forms must be removed and carried to a new place by the same slow process. So the inverted arches are formed for the foundation. Then the pillars or piers, monoliths of concrete 10 feet high and 22 inches square, are built where they are to stand. Looking across the partly-completed filters, one sees long rows of these roofless columns like the ruins of some newly-excavated Pompeii. When these are ready, the arched wooden forms are placed upon them, and the concrete spread above, which is to set into solid stone for the arches of the wide roof.

Over the roof is laid a level covering of earth 2 feet deep, stopping just 4 inches short of the upper rim of the manholes, so that no surface water can enter by way of the manholes. But how is the surface water falling in every rain to be kept from converting this earth covering into a swamp, and gradually working rifts, as water will, through the masonry of the roof? This is prevented by an ingeniously simple device. In the centre of each pillar is set a 2-inch terra-cotta pipe, bent with an elbow so as to come to the surface of the north face of the pillar one foot above the level of the sand in the filter. Over the top of the pier, where the radiating arches spring, there is naturally a sump or depression. The terra-cotta pipe set in the stone of the pier opens upward in the centre of this depression. Over the top of each of these pipes is placed a brass-wire screen, and over this 1 cubic foot of fine gravel and 11 cubic feet of sand. Thus water can never gather in pools upon the roof and become stagnant, but must work its way down through these prepared channels, and in going down must pass through sand and gravel, by which any impurities it may have gathered, as of decaying vegetation, will be mostly removed before it joins the mass of water in the filter below, again to pass through 5 feet of sand and gravel before reaching the underlying mains.

The filters are to be cleaned once a month, one filter a day, so that it will take practically a month to clean the whole plant. In cleaning, about one inch of the top surface of the sand will be carefully scraped away and removed. So carefully must this be done, that the workmen who do it will be required to wear flat-soled wooden sandals about 18 inches long by 6 inches wide, on which they go skating or sliding over the surface, where any dent of a boot heel might start a washout, through which the water would ultimately rush unfiltered. The water pressure will be very great, because each filter will contain water covering a surface of approximately 45,000 square feet and 4 feet in depth, giving 180,000 cubic feet of water, which at an estimate of 63 pounds per cubic foot, would weigh 11,340,000 pounds.

When the water has passed down through the sand and broken stone into the underlying mains, it flows through these to the "regulator houses," of which there are six, neat brick buildings, each controlling five filters. The water from the five filters is conducted into a central chamber in the "regulator house," and from this through 48-inch mains to the "filtered water reservoir."

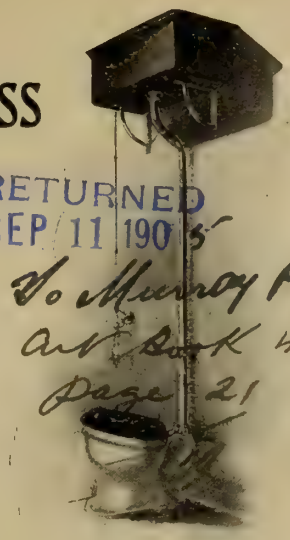
This is a vast underground structure, 612 feet long by 162 feet wide, the roof of which is formed of arches 18 feet in span resting upon columns of monolithic concrete masonry, 2½ feet square and each 27 feet high. As one walks through the empty structure now the likeness to a vast cathedral is still more impressive than under the arches of the filters. This reservoir will hold one-third of a day's supply for the city (25 million gallons). This supply must of course be drawn off three times every day, which is to be done by five great engines in the Trumbull street pumping station, to which the water is conveyed by four 48-inch mains from the filtered water reservoir.

The filters have been described as subterranean. They are, indeed, largely built upon excavated ground, but even so they are higher than the water in the Washington city reservoir, from which their supply is drawn. This makes necessary a special pumping station in connection with the filter plant, having for its sole work to raise the water from the reservoir and distribute it to the filters. The completion of the work is promised by the end of the present month. The total cost is estimated at $3,000,000.

The earth covering the roofs of the filters will be sown to grass, and the intersecting streets paved and parked, so that, with the vast lake of the Washington city reservoir on the west, the lands of the Soldiers' Home stretching far to the north, and the Capitol, the city, and the Washington Monument full in view as one looks southward from this elevated ground, the Washington filtration plant will be an added ornament as well as a source of incalculable benefit to the beautiful and rapidly-growing capital city.

HOW TO CLEAN BRASS.

The United States Government is said to have sanctioned the following method of cleaning brass: Make a mixture of one part common nitric acid and one-half part sulphuric acid in a stone jar, having also a pail of fresh water and a box of sawdust. Dip the articles into the acid, and then soak them in the water and finally rub them in the sawdust and they will take on a brilliant color. If the brass is greasy, it must be first dipped into a strong solution of potash and soda in water, and then rinsed, so that the grease may be removed, leaving the acid free to act.



BORDEN CO.'S MOVE.

Mr. M. E. Murray, representing the Borden Co., Warren, Ohio, called on Hardware and Metal in Toronto this week. The company have concluded arrangements for the manufacture of their pipe threading machinery and solid adjustable die stocks in Toronto to supply their growing trade throughout Canada. Mr. Murray will make his headquarters in Toronto, and will oversee the manufacture of the common machinery by Armstrong Bros., Sheppard street.

TRUCK FOR RADIATORS.

W. H. Armstrong, Vanwert, Ohio., has a new invention which pertains to improvements in hand-trucks particularly adapted for carrying heating radiators, the object being to provide a truck that may be readily adjusted to different sizes of radiators and having means for firmly gripping a radiator so as to prevent any movement thereof relating to the truck.

MUELLER PIPE REAMERS

Ratchet Handle Pattern

c-035.

Some reamers cut off the burrs well in some places, but skimp them in others, because the operator cannot hold them true in the pipe.

Mueller Pipe End Reamers have a breast handle for holding them true while operating. They leave a clean reamed surface in the entire circle of the pipe.

Mueller Pipe Reamers ream all sizes of pipe up to 3-inch, and are made in plain hand'e and ratchet handle patterns. The reamer illustrated is the ratchet handle pattern.

Each reamer is given a working test, bears the Mueller trade mark, and is *unconditionally guaranteed.*

We also make ground keys, compression and fuller work for plumbers' use. Catalogues upon request.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 8, 1905.

AFTER a long period of stationary prices, lead pipe has at last felt the effect of the pig market, and lower discounts are now quoted. This advance has been expected for the last six weeks, so that it will occasion no surprise.

Brass manufacturers issued partial new lists during the week, showing advances in the price of sheets, rods and tubing, but figures for other lines are not available, at time of writing. There is no doubt, however, but what they will show a substantial increase.

Supply houses are still kept busy filling good orders from all parts of the Province, as well as many points in Ontario.

The weakening of tin during the past week, has prevented any further increase in half-and-half solder, which remain very firm at the figures quoted last week.

Another feature of the week's trading has been the withdrawal by manufacturers of prices on soil pipe and fittings. New prices have not yet been settled, but the lists are expected in a few days. Some houses report a shortage in their supply of iron pipe, with the result that prices on this article are strengthened and given an upward tendency.

Range Boilers—There is no feature in the week's business which may be described as a healthy one. We give prices as follows: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The continued advances in pig lead have had the inevitable effect on pipe. The old discounts have been withdrawn, and we now quote: Discount 25 and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton 10c. per hundred lbs. extra.

Iron Pipe Fittings—Prices are somewhat firmer, though we do not amend previous quotations. We give prices as follows: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—Some jobbers complain of a shortage with the result that the market has strengthened. An advance may have to be chronicled before long. In the meantime, we still quote: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings—Manufacturers have withdrawn prices, but pending receipt of the new lists, jobbers are still giving the following prices: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—No further advance is reported, last week's prices still holding good. Our quotations are as follows: Bar solder, half-and-half guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street east,
Toronto, Septem' er 8, 1905.

LEAD pipe has responded to the higher prices quoted in the metal markets for pig lead and discounts have been lowered 5 per cent., being now 25 and 5. Despite the advance, buying continues very heavy.

No other changes are reported, although an advance on brass goods is looked for daily on account of the high price of copper. Iron pipe continues strong with no change in quotations. Soil pipe is very scarce and supply houses are behind in their shipments owing to their inability to secure goods from the manufacturers.

Business during August was the largest in the history of the trade, being considerably larger than last year's record figures. September also has started out remarkably well and from the present outlook the month will be a top-notcher.

Lead Pipe—The looked-for advance has arrived and lower discounts are noted. We quote as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—Shipments are behind owing to foundries being unable to fill orders. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Stocks are fairly large and prices continue firm. Our quotations are as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers—Buying continues active and no change in prices is looked for. We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Iron Pipe—No shortage in stocks exists. Prices continue very firm, however, as some have looked for higher prices. Prices are firm. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Demand is strong and despite weaker conditions in metal markets, prices are firm at the old figures. Our quotations are as follows: Bar solder, half-and-half, guaranteed, 19 1-4c.; wiping solder at 17 1-2c. and refined 17 3-4c.

Enameled Ware—Manufacturers keep well up to the demand. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $17.50, special, $15.50; 3 inch rim, first quality, $19; special, $17; 5 1-2 feet, 2 1-2 inch rim, first quality $19, special, $17; 3 inch rim, first quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.45; special, $2.

NEW FLUSH VALVE.

J. P. Goodfellow and S. R. Ramsay, New Westminster, B.C., have invented a flush valve the objects of which are to improve the construction of devices of this character in such a manner as to do away with the annoyances of the ball-cocks, floats and the like now in use, to simplify the construction of such devices, and especially to provide a valve which will be balanced under all pressures.

ELECTRICAL NOTES.

IN order to prevent wireless messages interfering with one another, endeavors have been made to send electrical waves only in one direction, as luminous signals are given off from a concave mirror. Prof. Braun has been engaged in experiments of this kind, and in a lecture given on July 11 last before the Strassburg University Association of Electricians and Naturalists he announced that these experiments had come to successful conclusion. Prof. Braun's methods are based on the fact that three antennae arranged in the angles of a regular triangle are excited by waves of the same periodicity, but of different phases. The inventor states that one of the three antennae begins vibrating by 1-250,000 second earlier or later than the two others, this difference in time being kept up, according to experiments, with an accuracy of about one second in three years. This will result in different radiation according to the difference of the space, and by simply inverting a crank the direction of maximum effects can be shifted by 60 or 120 degrees.

A new system of electrically lighting trains is being adopted on certain British railroads. This is the Leitner-Lucas system. It differs from the general Stone type, wherein the electrical energy is generated by an axle-driven dynamo and stored in accumulators, inasmuch that instead of compensating the variable speed of the axle by a slipping belt, there is an automatic decrease of the lines of force cut by the armature windings, by reducing the dynamo field in approximate proportion to the speed of revolution. To attain this end, subsidiary armature windings are mounted on the same shaft as the primary armature and revolve under small separate fields, thereby becoming a small subsidiary dynamo. This arrangement is carried out in such a manner that the flow of current through the main field is counteracted or choked back by an opposing electromotive force from the small subsidiary armature, which opposing voltage rises proportionately to the speed at which the whole machine is driven. Various methods of winding have been adopted in this system for regulating against sudden rise of current or voltage in the circuit feeding the accumulators and lamps due to variations. The output of the dynamo is kept reasonably constant independent of the train speed.

Among miners, where the underground workings are lighted by electric incandescent lamps, there is often a tendency to be careless in the handling of the lamps. As the light is not naked, it is considered that the lamps may be laid down anywhere without fear or danger. Some experiments that have been carried out in England, however, prove the fallacy of this contention, and show that an incandescent electric lamp is equally as dangerous if not properly handled as a naked light. The investigations of Mr. H. Hall, one of the British Government inspectors of coal mines, showed that when a sixteen-candle-power lamp was covered with coal dust, the generation of heat was so rapid that within four minutes a temperature of 450 degrees F. was attained, and the bulb burst. His investigations also showed that when the heat had risen to a certain point evidences of spontaneous combustion developed, and although the lamp was then removed from the coal, heat generation still continued, and finally the coal burst into flame. In another case the investigator imbedded a 100-volt 16-candle-power lamp in a heap of coal dust. Within three minutes smoke was emitted from the dust, and in another case where the lamp was simply laid down upon the heap, flame burst out in the course of twenty-five minutes. Colliery managers should therefore impress upon the miners the great danger, when stopping work for a few minutes, attending the laying down of the lamp upon the ground. It should always be suspended, with the bulb free from contact on all sides. Every care should also be displayed in handling the globes as as to avoid breakage, as the instantaneous exposure of the incandescent filament when the bulb bursts is sufficient to create a violent explosion should any firedamp be present. A short time back a terrible explosion occurred in a French coal mine, by means of which sixteen men lost their lives, owing to the ignition of the firedamp by the bursting of an incandescent bulb.

NEW SHOP OPENED.

George H. Cooper, one of the most popular members of the Toronto Master Plumbers' Association, is wearing "the smile that won't come off," he having opened up a branch show room and shop at 113 Church street, just below Queen. This expansion in itself is sufficient to put the expansionist in good spirits but when it is realized that the new shop is run in connection with a dressmaking establishment George's friends will know the reason for his unusually broad smiles. Mr. Cooper will continue to do business at 151 Berkeley street but he can be found at the dressmaking address each day at noon as well as in the evenings.

AIR AND GAS MIXING APPARATUS.

H. L. Karger, 26 Frankfurter Allee, Berlin, Germany, has invented an apparatus for mixing air and gas for illuminating purposes. In accordance with this invention uninterrupted operation is provided for by means of circulation conduits in appliances for mixing gas and air; and also for the supply of the mixture at a high pressure, so that in this case both air and gas or two different kinds of gas are sucked in and forced out. Suction of two kinds of gases may be effected either into a common chamber or separate chambers. Employment of special circulation pipe for gas and another for air is not possible, because exact co-operation of the valves leading back to the pressure main is unattainable.

RUST REMOVERS.

Cover the metal with sweet oil, well rubbed in, and allow to stand for forty-eight hours. Smear with oil applied freely with a feather or a piece of cotton wool alter rubbing the steel. Then rub with unslaked lime reduced to as fine a powder as possible. Immerse the article to be cleansed for a few minutes, until all the dirt and rust are taken off, in a strong solution of potassium cyanide, say about one-half ounce to a wineglass of water. Take it out and clean it with a toothbrush with some paste composed of potassium cyanide, castile soap, whiting and water mixed into a paste of about the consistency of thick cream.

A WATER LIFTING PLANT.

With a more general use of all classes of plumbing fixtures, a demand has been created for running water on every floor of dwellings whether in the city or in the country. In many places the elevation of the building is too high to avail one's self of the city pressure, while in the country there is rarely any supply under a sufficient pressure head. In either case, moreover, the water furnished may be of such a character that it is not desirable for domestic consumption. To meet the demand the Goulds Mfg. Co., Seneca Falls, N.Y., has developed an automatic water pumping outfit, which is illustrated in the accompanying engraving. The essential feature is the duplex water lifter, which is a duplex pump, receiving the low pressure water in its working cylinders and forcing from its pumping cylinders either a portion of the low pressure supply or a supply from an independent source. The working cylinders must of course be large in respect to the force or pumping cylinders.

RETURNED
SEP 11 1905
J. Owner
Cut Book 40
page 3

Duplex Lifters for Household Water Supply.

The pump has two horizontal power cylinders and two pumping cylinders, being duplex, as stated, and the pump cylinders have an air chamber to act as a cushion with the discharged water. The entire lifter is provided with drain or draw-off cocks so that water may be drawn off when the house is unoccupied. In the illustration connections are shown for the supply of cistern water at the right hand side of the pump, which after the energy has been expended in moving the pistons wastes away into the sewer. These pistons drive the pumping pistons which pump the domestic supply. One advantage of this arrangement is that the pump may be placed in the kitchen or cellar as the needs of the case may demand, and if a supply is taken from an underground cistern it may be used as a suction pump as well.

In operation the pump is started by opening the city cock on the supply valve and pumping all the pipes full of water, by which time the air in the air tank shown is compressed by an amount that corresponds to the height of the tallest column of water. The pump continues in operation, compressing the air in the air chamber until the pressure reaches a predetermined point, when the pump automatically stops working. It remains inactive until some faucet is opened, allowing the water to flow out, the compressed air meanwhile acting to keep the water under pressure. An attic tank is necessary with this system, but is not required when connections are

---

Toy wagons, children's garden tools, saws, engines, etc., are found to be valuable side lines in some hardware stores.

SUPPLY HOUSE IMPROVEMENTS.

A TOUR through the plumbing supply establishments in Toronto will give Exhibition visitors the impression that business is in a good condition, several of the supply houses having made great improvements in their offices and show rooms recently.

The Ontario Lead & Wire Company's move from their Lombard street quarters to the handsome offices on Richmond street east is one of the most important changes and Mr. Fred Somerville is to be congratulated on the improvement made. The entrance to the offices is on Richmond street while the show room is reached from Church street.

The James Robertson Company have improved their offices greatly by extending the counters and frame work, and they have under way equally important improvements in their show rooms.

Taylor-Forbes Company, who opened temporary offices at 21 Richmond street west some weeks ago were unable to complete their new warehouse on King street west (near the subway) for the Exhibition, but they expect to be installed in their new quarters in a couple of weeks and will branch out into a complete jobbing house for heating supplies, carrying a stock of boilers, iron pipe, etc., in addition to their popular "Sovereign" radiators.

R. J. Cluff & Company have improved their office and warehouses on Lombard street and are looking forward to getting into the new Warden King building on Sheppard street before many months.

The Canada Brass & Supply Company's offices on King street, just west of York, are fitted up in splendid shape and R. W. Crashley, the manager, reports a very large business for so young a firm.

The James Morrison Company have not been making elaborate changes but a new flooring in Charles Morrison's offices is an improvement and allows them to be included in the list we have given.

HIGH CLASS CUTLERY.

ACCORDING to English makers, there is a better demand on the part of the public for pearl-handled cutlery. There is something so dainty about the appearance of these when well finished that one does not wonder that they appeal to the eye. Their display upon a table-cloth is, in the mind of the fastidious, a certain indication of taste, and by all accounts the public are purchasing more freely than they were wont to do. It is perhaps open to doubt whether the system of placing these goods upon plush in a well-got-up case is altogether in favor of their systematic use. There is something so suggestive of the cabinet about them that the middle classes would possibly be disinclined to use them except upon special occasions. People like to think that they possess such things, and enjoy displaying them before their guests but the conditions under which they are brought into use are all in favor of preservation, which is by no means to the interest of the manufacturer. It could hardly be expected that the demand for these articles could become general, but evidently more are being sold since more are being manufactured.

OXFORD HEATING SYSTEM

(BOILERS and RADIATORS)

YIELDS BIG PROFITS TO DEALERS

Why It Pays You to install our goods. They cost you no more than inferior goods. You can recommend them to a customer without having to dodge him afterward. Their merits are obvious even to the uninitiated. For sixty years we have improved them, adding year by year everything that experience suggests to make them the best. We have succeeded. To-day the OXFORD stands without a peer.

Greatest Heating Capacity is attained by the overhanging walls of the fire-pot, which expose a very large surface to the direct action of the heat. The first section over the fire is double size, and with the bell-shaped flue openings, greatly adds to the efficiency of the boiler.

Gaskets and Washers Discarded The iron to iron connections made by our Oxford Steel Push Nipples, which are employed in all Oxford Boilers, supplant the gaskets and washers which used to add most conspicuously to boiler defects.

Our Devices All Improved We have improved every part of the apparatus, and we claim they are better made, better assembled, better in appearance—and we can prove it. We are willing to put the Oxford in comparison with any goods of similar character in the world. Dealers who handle the Oxford most make this unqualified challenge, with the knowledge that we can stand back of it with the reputation and THE GOODS.

OXFORD HOT WATER and STEAM RADIATORS

are a superb complement to the Oxford Boilers. They give uniform conduction of heat throughout the house and the artistic embellishments we can provide, when desired, will give them the highest ornamental value. The Oxford Steel Push Nipple, with which all radiator loops are connected, obviates the use of gaskets or washers, and adds immensely to their serviceable qualities as you will technically understand.

Send for our handsomely illustrated Catalogue. It tells the whole story.

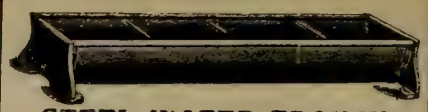
NEW CARPENTER'S PLANE.

THE Union Mfg. Co. of New Britain, Conn., U.S.A., call attention to their line of planes and other carpenters' tools, particularly their new line of "X" planes. As will be seen by the illustration shown, these planes are new and have many features not shown in other lines. The cutters are extra heavy and well tempered. The frog, or



Sectional View of Plane.

cutter seat, is a part of the body of the plane and cannot become loosened in any manner. The cutter is raised or lowered by means of a lever giving the simplest and at the same time the finest adjustment on any plane. This plane will be particularly welcomed by all union carpenters who are always on the lookout for new tools of real merit. Other tools made by this company are block planes, a full line of wood planes, wood planes with steel face, circular planes, spoke shavers and scrapers.

NEW HOSE HOLDER.

A. G. Burton, Denver, Col., has invented an improvement in hose holders, especially designed for holding hose in use for sprinkling lawns and the like. Construction is simple and easily applied. By bending the points of the tripod so they extend parallel to each other, and may be forced straight into the ground it is found in practice that but slight pressure is required to force the points into the ground and that the holder will not turn over, no matter how heary the force of the water.

HARDWARE MEN: Our

STEEL WATER TROUGH

is a seller—something the average farmer has been waiting for.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

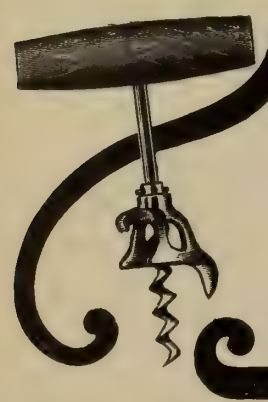
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.



THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

SUCCESSFUL ADVERTISING

How to Accomplish It

By J. ANGUS MacDONALD

Competent critics have recognized this as the **Best Book on Advertising** yet published. It is a PRACTICAL work for advertisers and business men.

The *Brooklyn Eagle* says of Successful Advertising :

"Advertising is one of the biggest businesses—perhaps the biggest business—in the world. To treat of it comprehensively is as difficult as to treat comprehensively of military strategy or the making of a newspaper. Mr. MacDonald has succeeded. He has produced an admirable and exhaustive monograph.

"Perhaps the deepest pitfall into which an author might fall in writing upon such a subject as this is too much theory and not sufficient practicality. Most happily has Mr. MacDonald avoided this chasm: he writes from practical experience in the field, and his methods as presented have been given the thorough tests of time and circumstances.

"Any one with even a superficial knowledge of advertising cannot but perceive that in the many examples shown are evidenced a thorough knowledge of the subject and a businesslike and practical grasp of advertising which is far removed from the light, airy and entirely impractical and hare-brained stuff which is not uncommon in literature treating of the subject of advertising."

The General Advertiser, The Retail Advertiser, The Advertising Writer, The Mail Order Advertiser will find this work invaluable. The price is out of proportion to its worth. Cloth bound. 400 pages.

Postpaid $2.00 per copy

CARBORUNDUM THE MODERN ABRASIVE

A LITTLE more than ten years ago a scientist, in making some experiments with an electrical furnace, produced a little bunch of bright diamond-like crystals which were chemically almost an exact counterpart of the most precious of gems. But it wasn't the real diamond, and therefore, from a scientific point of view, the discovery was considered of little value. Some practical men, however, who had noticed the hardness of the new material and the fact that it would even cut a diamond, saw that as an abrasive it could be made of considerable commercial value. Developments along this line began, and to-day the Carborundum Company of Niagara Falls, N.Y., have an enormous output of what is considered the most satisfactory abrasive yet discovered. It is the purpose of this article to describe the process by which carborundum is manufactured, and its utility in modern commerce.

The raw materials for this industry are granulated coke, glass sand, salt and sawdust, the latter of which is included for the purpose of making the mixture porous, and to allow the free escape of gas. These apparently irreconcilable materials are united to form a homogeneous mass, in electrical furnaces whose power is supplied from the mighty falls of Niagara, and whose heat, though unmeasured, probably approaches very nearly that of the sun itself.

Coke is used in two different sizes to manufacture carborundum. kernels of certain size being used as the core, and a fine powder forming part of the mixture or charge for the furnaces. It first goes through a grinder, which breaks it up into small pieces, and then passes successively through two cylindrical screens, the first of which removes all particles of coke which are too small to form the core, while the second allows kernels of the requisite size to pass through the meshes and fall into the core-bin. Below the bin are scales on which sand, coke, sawdust and salt are weighed out in proper proportions, and conveyed by an elevator to a mechanical mixer-from which the mixture, ready for the furnaces, is emptied into a bin.

A furnace is in the form of an oblong box with internal dimensions of 16x5x5 feet, and the ends have a thickness of about two feet, while in the centre of each are terminals consisting of carbon rods. First, the side walls of the furnace are built up to a height of 4 feet, and half filled with the mixture, when a semi-circular trench is formed, to contain the core, whose top is rounded off neatly so that it is in the form of a solid cylinder, 21 inches in diameter and 14 feet long. The walls are then continued to a height of five feet, and the mixture thrown in and heaped up to a height of about 8 feet. The electric current is now all that is required, and in this connection it is interesting to observe that the Carborundum Company have the second largest transformer in the world, reducing to the required voltage an electromotive force of 2,200 volts.

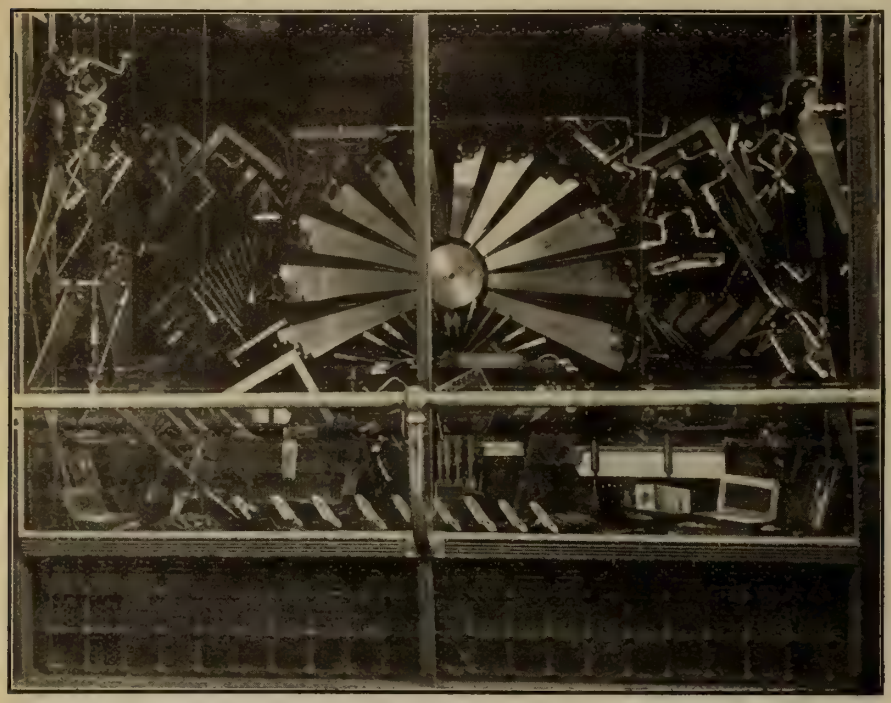
After the circuit is closed and the current turned on, no apparent change occurs in the furnace room for about half an hour. Then a peculiar odor is noticed, due to escaping gases, and when a match is held near the furnace walls, the gas ignites with a slight explosion. After about three or four hours of the electric current, the side walls and top of the furnace are completely enveloped by a lambent blue flame burning the gas formed from the carbon of the coke and the oxygen of the sand. Some time later the top begins to subside and fissures form along the surface, from which white hot cinders are often "blown" to a height of several feet. It is mainly to obviate this "blowing" that swadust is introduced into the original mixture.

After an operation of thirty-six hours the current is cut off from the furnace, and it is allowed to cool for a few hours. Then the side-walls are taken down and the top raked off until the outer crust of the carborundum is reached. This is cut through with steel bars and the inner crust then removed, disclosing the crystalline carborundum. From the core radiate beautifully colored carborundum crystals to a distance of 10 or 12 inches, and a single furnace will yield about 7,000 lbs. of these crystals.

Removed from the furnace, the carborundum is taken to a crusher which breaks the mass of crystals apart. Thence it goes to large wooden tanks and is treated for several days with diluted sulphuric acid to remove impurities. It is then thoroughly washed and graded according to the size of the crystals.

Carborundum is apparently infusible, for, after a certain temperature is reached decomposition commences without fusion, the crystals being broken up into carbon and silicon. This fact will probably serve to explain why carborundum so far as known does not occur in nature, even to a very small extent. It is also quite insoluble in water, or in any acid. Its hardness is somewhere between 9 and 10 degrees, that of the diamond being 10 degrees. Its specific gravity is less than that of emery, whence it is seen that a carborundum wheel is considerably lighter than an emery wheel of the same dimensions.

In making carborundum wheels, vitrified bond is used for the most part, the mixture being placed in a mould and pressed in a hydraulic press. After being removed from the mould, it is placed on a support made of baked clay, and the vitrifaction of the wheels is carried on in kilns similar to those used in making porcelain. This operation consumes seven days, after which the wheels are placed in lathes and trued up with dressers or diamonds. Another bond is shellac, which gives very satisfactory



Carborundum Window, Shown by Rice Lewis & Son, During the Exhibition.

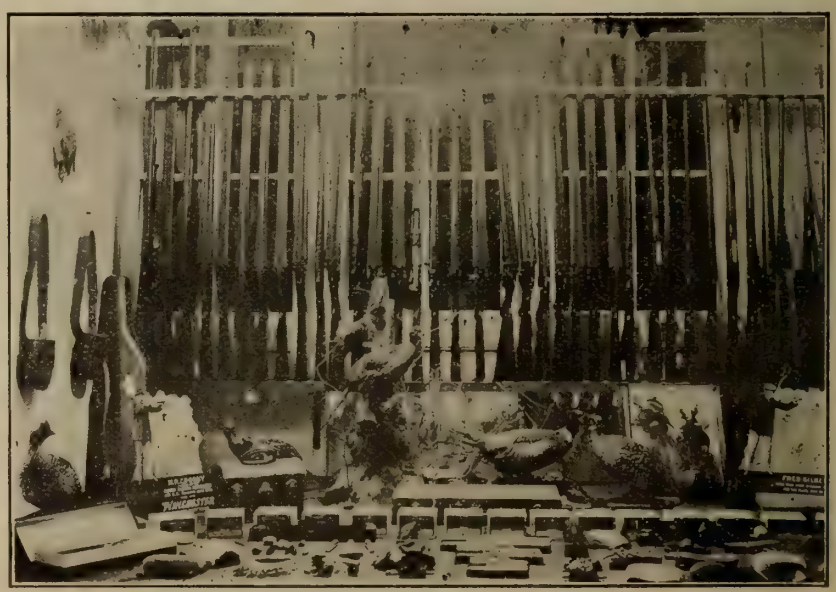
results for work requiring very thin wheels, or special forms.

At the present time carborundum is from two to five times dearer than emery, but it does more work more quickly and satisfactorily. Watchmakers use it instead of diamonds, where emery and corundum would be quite unsuitable, and among its numerous other uses may be mentioned finishing the soles of shoes, manufacturing pottery and porcelain, and smoothing up "biscuit ware." In the manufacture of bath tubs, it has been found that carborundum rubbing blocks can do the work in one hour that emery would take a day to do.

Thus the importance of carborundum as an abrasive can hardly be over-estimated. In foundries and machine shops carborundum wheels are by this time most extensively used; carborundum cloths and papers are a boon to carpenters and other mechanics, and carborundum knife sharpeners are being introduced into homes all over the country. In short, the unique qualities of carborundum have given it a pre-eminent position in the world of abrasives.

Handsome Tool Window, Shown by Rice Lewis & Son During Toronto Exhibition.

TWO HANDSOME WINDOWS.



RICE LEWIS & SON, Limited, are never behind in using to the fullest advantage the splendid facilities they possess for displaying goods in their show windows and in drawing customers inside by the attractive showing from the exterior. The window dresser excelled himself, however, in the displays made during the two weeks of the Exhibition, when hundreds of hardwaremen and tens of thousands of other visitors were in the city, and Hardware and Metal's photographer was fortunate enough to secure snap shots of the Rice Lewis windows.

The most interesting window, and the one which attracted the attention of nearly every passer by, was the circular window on the corner of Victoria and King streets, the contents being products of the furnaces and factories of the Carborundum Co., Niagara Falls, N. Y., for whom Rice Lewis & Son are agents. The circular shape of the window prevents the photographer from doing full justice to the display, but enough is shown to indicate the beauty of the exhibit. The centrepiece is a large mass of ore-like black diamond crystals, and surrounding this on the floor and walls, and in cases, are samples of the various forms of abrasives, wheels, cones, oil stones, razor hones, paper, etc., made of carborundum. A beautiful electrical lighting fixture in bronze added to the beauty of the window while a number of cards give the passer by a brief idea of the sources and uses of the articles shown. An invitation to "Come in and get your knife sharpened!" was accepted by hundreds and the demonstrator inside was kept busy sharpening all manner of edged blades, explaining the virtues of carborundum and selling oil stones and hones to the satisfied visitors who had seen dull blades sharpened so swiftly. The company also advertised in the daily papers, offering to sharpen the knives of any who would visit the store.

The second window showed a most complete line of carpenters and mechanics' tools, and the view shown illustrates the manner of display so well that further description is unnecessary. The central arrangement of the saws is very attractive, while the whole display is well balanced and not too crowded.

A SPORTING GOODS WINDOW.

In the illustration this week is shown a sporting goods window prepared by Fred Culk for the retail store of the J. H. Ashdown Hardware Co., Limited, of Winnipeg. The arrangement of the rifles, shot guns and other articles included in the display is shown in the illustration. The window was a very attractive one and it commanded the attention of many passers-by.

A Winnipeg Sporting Goods Window.

AN INTERNATIONAL COMBINE.

The London Times reports that an arrangement has been arrived at between the British and German makers in the screw trade, by which the severe competition which has prevailed for so long in this branch of the trade will come to an end. It is understood that a syndicate has been formed embracing all the makers in the trade and that one uniform price has been fixed, representing an advance of about 50 per cent. on previous quotations. The British market is to be closed to the importa-

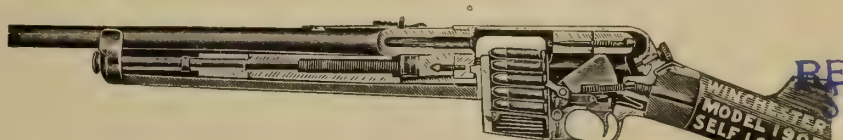
tion of German screws. No British orders will be received by German manufacturers after October, and all orders in hand must be executed by December 21st next. In a circular to their customers, one of the largest buyers of German screws in the United Kingdom states: "As the way towards the formation of an international syndicate is now simplified as between British and continental makers, further advances are impending, and it is probable that the British market may shortly be closed to the import of German screws." This new movement, says the Times, is regarded as one of the most important which has taken place in the screw trade for many years.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

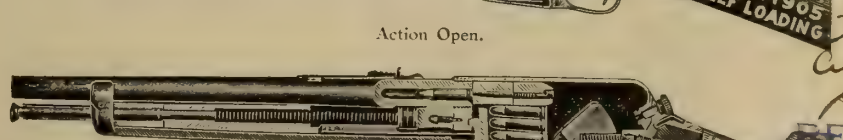
956. A London house makes inquiry respecting Canadian consignments of asbestos fibre.

958. A Cape Town firm of commission merchants desires to get into communication with a Canadian manufacturer of wire window screens (adjustable) and doors.



SELF-LOADING RIFLE.

THE Winchester Repeating Arms Co. has just brought out a new rifle in the shape of a self-loading, hammerless take-down in .32 and .35 calibres. It is the first rifle of the self-loading type made for centre fire ammunition, the cartridges it handles being of the modern smokeless powder type, using metal patched bullets. Both of these cartridges give excellent penetration and with metal patched soft point bullets they have great shocking effect on animal tissue.



As its name indicates, this rifle is self-loading. The recoil of the exploded cartridge ejects the empty shell, cocks the hammer and feeds a fresh cartridge from the magazine into the chamber, leaving the rifle ready to shoot upon the operator's pulling the trigger. By means of the trigger lock, the trigger can be locked if desired, so that the rifle can be carried with the hammer at full cock when loaded. The magazine is of the box type and holds five cartridges. By inserting a cartridge in the chamber before placing the loaded magazine in the gun, the operator can have six shots at his disposal. If rapid reloading is desired, extra magazines can be carried in the pocket loaded, ready to replace an exhausted magazine in the rifle. The operation of this rifle should not be confounded with that of machine guns, which reload and fire to the extent of their magazine capacity without stopping after the trigger is first pulled. In using the Self-Loading Rifle, it is absolutely necessary to pull the trigger for each shot, which places its operation as completely under the control of the operator as that of any repeating rifle. The operation of this rifle is simple and easily understood. The working parts are few and strong, and as there is nothing complicated in its construction, it is not apt to get out of order when used with ardinary care.

The Model 1905 Self-Loading Rifle is

Sherwin-Williams *Modern Method* Floor Finishes offer the greatest opportunity for specialty paint trade and profits.

They are the most uniform and the most reliable of goods backed by a most thorough advertising system. We are constantly working to sell our products after they are on your shelves. We will gladly tell you how we work with you to do this. Just now we are devoting a large share of our efforts to pushing our line of Modern Method Floor Finishes for finishing old or new floors, in any style desired. Like all Sherwin-Williams Products, they fulfill the purpose for which they are manufactured in the most serviceable and economical manner. We say this because we have not spared money or labor in obtaining materials best adapted to long usage, as well as great care in making the goods. They are the best that can be made.

The Sherwin-Williams Modern Method Floor Finishes include:

For Painted Finish
Inside Floors—*THE S-W. INSIDE FLOOR PAINT.*
Porch Floors—*THE S-W. PORCH FLOOR PAINT.*

For Varnished Finish
Natural—*MAR-NOT,* a durable floor varnish.
Stained—*FLOORLAC,* stain and varnish combined.

For Waxed Finish—*THE S-W. FLOOR WAX.*

For Unsightly Cracks in Old Floors
THE S-W. CRACK AND SEAM FILLER.

made with blued trimmings and a plain walnut stock and forearm not checked. The barrel is round, 22 inches long and is fitted with Sporting front and rear sights. Octagon or half octagon barrels, or barrels longer than 22 inches cannot be furnished for this rifle. The stock is 14 inches long and finished with a rubber butt plate; drop at comb, $1\frac{3}{8}$ inches; drop at heel, $2\frac{1}{4}$ inches; length of gun over all, 40 inches. Fancy walnut stocks and forearms, plain or fancy walnut pistol grip stocks checked or unchecked, and stocks having special length or drop can be furnished for this gun when so ordered at the same list prices as for other models.

These rifles are handled by Frothingham & Workman, Limited, of Montreal, who will quote prices or send circulars giving complete description of their finish and operation.

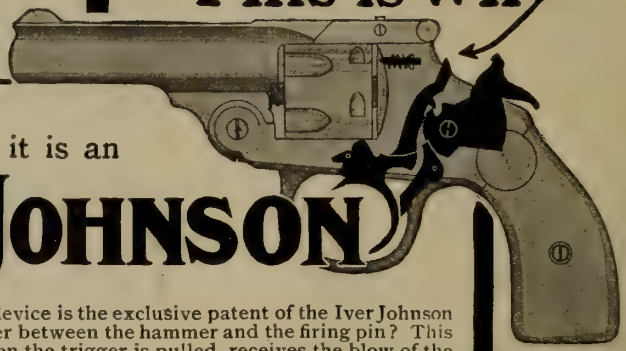
WIRE SCREENS FOR S. A.

C. M. Kittson, Canadian commercial agent at Cape Town, reports that South Africa, owing to the faet that she has at certain seasons many insect pests, offers a peculiarly suitable market for the exploitation of wire window screens (adjustable variety), and wire screen doors, neither of these articles have up to the present received the attention which the possibilities of the market deserves.

THE HORSESHOE AND GOOD LUCK.

THAT the horse shoe is a symbol for good luck is doubted by very few, with no respect of country, time or place.

The origin of this particular belief is referable to the old legend of St. Dunstan. This versatile English ecclesiastic was a skilled farrier, and one day while at work in his forge the Evil One entered in disguise and requested Dunstan to shoe his "single hoof." The saint, although he recognized his malign customer, acceded, but caused him so much pain during the operation that Satan begged him to desist. This Dunstan did, but only after he had made the evil one promise that neither he nor any of the lesser evil spirits, his servants, would ever molest the inmates of a house where a horseshoe was displayed.



Very different is the story by which the Irishman seeks to account for his liking for the same talismanic symbol. The name "Ironland" or "Ireland" he will tell you originated as follows: "The whole island was once submerged in the sea, out of which it only rose once in seven years, and then only for a short time. Many attempts had been made to break the spell and induce the country to remain permanently above the waters, but all in vain, until one day a daring adventurer threw a horseshoe from a boat on to the topmost peak of the Wicklow Mountains, just as they were disappearing beneath the waves. Then at last the ban was removed. The Emerald Isle began forthwith to rise again from the ocean depths into which it had sunk."

LARGE DEMAND FOR CASE GOODS

THERE is evidence of an improved demand for case goods. This is probably due to a revived taste in giving, for wedding presents, the handsome and effective sets of fish eaters, dessert sets, salad sets, etc., which are so well got up by many of the English cutlery manufacturers. These sets of knives and forks, with pearl or ivory handles, delicately arranged on plush, make an excellent display, and, as the saying is, "look good." There is usually a fair demand at this time of the year for this class of manufacture, but now there are many more selling than usual, and this is an indication that the public taste, which has a knack of running in given directions, is setting strong towards case goods. A popular present a year or two ago was a set of carvers and steel in a case, and newly-married people were invariably in receipt of quite a selection of these articles. Then there came an outcry against carvers, and other things were substituted. Now the dainty pearl-handled fish eaters appeal to the guest's sense of the beautiful, and, though hardly appropriate in nine cases out of ten, the bridal pair may rely upon receiving an assortment of the article in question.

Accidental Discharge Impossible—

HIGH SPEED STEEL KNOWN TO ANCIENTS.

IN a paper recently read before the Iron and Steel Institute, Mr. J. M. Gledhill stated that the famous Damascus steel was in reality nothing but a form of our modern high speed tool steel, for it contained all the important properties of the latter. Marvelous cutting powers have been attributed to it and recent analyses of the material show that it contained certain percentages of tungsten, nickel and manganese. This shows that a latent high speed steel was in existence centuries ago. All that was found necessary in order to bring out its inherent qualities was to "burn" it, a process which was long thought to destroy its usefulness, but which is now known to produce its greatest adaptability to the work in hand and render it capable of effecting a great revolution in machine shop practice.

NEW LEATHER GOODS FIRM.

GENERAL LEATHER GOODS, LIMITED, is the name of a firm recently incorporated in Toronto for the manufacture of all kinds of leather goods. The factory of the firm is advantageously situated at 1183 Bathurst street, on the line of the C.P.R. and near the Niagara Power Co.'s lines. The plant of the firm has been running four months, and the company has sufficient business on hand to warrant them in making a two-storey addition to their building, on which operations are already well advanced. The firm manufacture ladies' and gentlemen's belts, razor strops, school bags, rug straps, skate straps, harness parts, halters, etc. The managing director is Mr. R. H. Cameron, who has had many years' practical experience in all branches of the business.

A neat showing of small articles like nail clippers, thread cutters, key rings and chains, corkscrews, etc., will catch the nickels and dimes without much trouble.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

KEEWATIN Flour Milling Co. have closed a contract for the machinery of one of the largest flour mills on the continent. The equipment will be equal to 40,000 barrels a day, and provision has been made for a further output of 20,000 barrels. The successful tenderers were the Allis-Chalmers Co., of Milwaukee, who have built all the large flour mills in the United States. The amount involved will be about $225,000. A considerable portion of the machinery will be constructed at the works of Allis-Chalmers-Bullock, Limited, in Montreal. The contract calls for the installation of the universal bolter system throughout. The power is derived from the Lake of the Woods, and wherever possible electricity will be used in the operation of the plant. A separate water wheel will be installed to generate the current, and the elevator of 500,000 bushel capacity, the car pullers, the wheat shovels, the passenger and freight elevators, the cooper shops, etc., will be run by electricity. The mill building and elevator, now under construction by the Macdonald Engineering Co., of Chicago, will be completed by the 1st of January. Mr. John Mathers, of Ottawa, is president, and a number of Ottawa capitalists are interested. They are determined to have a mill equal to anything on the continent in operation at an early date.

George H. Hees Son & Co., Toronto, are to erect a five storey office and factory building at Bay and Piper streets.

Grand Forks is likely to be the site chosen for the new smelter to be erected in the Boundary district by the Dominion Copper Co.

The Deseronto Board of Trade have chosen these officers for next year: President, John Dalton; vice-president, W. J. Malley; treasurer, A. G. Bogart; secretary, H. R. Bedard.

Prominent officials of the Plymouth Cordage Co. were in Welland this week concluding arrangements for the establishment of the large binder twine factory to be erected in that place.

Richard Ricardi, of Richmond, Va., who manufactures clothes pins and has both a Canadian and an American patent, is thinking of moving to Canada and views Ottawa with a good deal of favor.

The Brant Milling Co., of Brantford, are to erect a new brick two-storey warehouse and cooperage shop. Up-to-date and fireproof materials will be used throughout. Modern cooperage machines will also be installed.

A new sawmill will soon be added to the large number already doing business on the Fraser River. It will have a capacity of 35,000 feet per day and will be owned by the Maple Leaf Lumber Co., Maple Grove, B.C.

Grand Trunk officials say the failure of the Dominion Steel Co. to deliver 25,000 tons of rails from June to September has forced the railway to order 5,000 tons from the United States on which they must pay a duty of $35,000.

Negotiations are still in progress with Japan for Canada's admission to a treaty that will entitle Canadian goods to minimum tariff in the Mikado's domain. Things have, however, reached such a stage that the acceptance of the treaty is practically assured.

September 12 will long be remembered by the people of Fort William as one of the greatest days in the history of the town, Sir Wilfrid Laurier having turned the first sod of the G.T.P. The town presented a magnificent appearance with its thousands of yards of bunting and British flags.

The annual report of the Canadian Electric Light Co., Quebec, reveals a very prosperous condition of affairs highly creditable to the directors and satisfactory to the shareholders. It shows an increase in revenue, and, therefore, presumably in business, of close upon $8,000, and a surplus on the current year's operations of $2,041.

The land is first cleared of all underbrush and moss. Electrically driven appliances then excavate the peat, pulverize it and scatter it over the earth, where it is allowed to lie for some time, until the moisture is reduced by evaporation. There are then appliances for gathering the peat where it is taken to the plant on the electric motors.

Arrangements are being rapidly completed for the annual meeting of the Canadian Manufacturers' Association, to be held in Quebec on Monday, Tuesday and Wednesday, the 18th, 19th and 20th inst. A large attendance is assured. Lieut.-Governor Sir Louis Jette has invited the delegates to an at-home at Spencerwood on Tuesday, the 19th.

Negotiations have been concluded for the leasing of the Lake Superior Corportion copper plant at the Soo to the Canadian Nickel Co. for the purpose of experimenting in copper and nickel refining by means of electricity. The experiment will start about Sept. 15. If successful, it is intended that the Lake Superior Corporation shall introduce the system.

The Londonderry Iron and Mining Co. is erecting a large shaft house on the property of F. Wheelock at Torbrook Mines. The drilling on the shaft is being done by steam. A lot of machinery will be installed there in a few days, including an air compressor. An engineer to survey railway extension to the mines is expected, after which Mackenzie & Mann will start work on the road with five hundred Italians.

The Manitoba Peat Co.'s plant at St. Frances has commenced operations and fuel will be supplied to Winnipeg this winter. The company was only organized last winter and now it has a splendid plant, electrically equipped throughout. The main building contains an engine, two boilers, a large electrical generator, dryers, compressors and all the necessary machinery. There are in addition large storage sheds. To show that the peat is almost inexhaustible it pointed out that there are nearly 20 square miles of peat bogs.

The report of the Allis-Chalmers Co. for the fourteen months ended June 30, 1905, was disappointing from the stockholders' standpoint. The net profits for the period amounting to $1,146,981 were with the exception of $68,000, used for betterments and depreciation. All that was available for dividends was $68,000. The prospects for an immediate resumption of dividends on the preferred stock are not encouraging. The company's working capital, while comparing favorably with the preceding report, is considerably smaller than it was in 1903 and 1902.

The factory of the Munro Wire Works, Limited, who recently began business in Winnipeg, presents a busy scene of industrial activity and the enterprise promises to develop quickly into one of the most important of the local manufacturing institutions. The factory is splendidly equipped from the power house to the fifth flat. The company manufacture all manner of steel and wire fencing, grills, gates, etc., but make a specialty of wire bed mattresses, and their factory is kept running to its fullest capacity, in fact such a demand has been created for their output that larger premises are in contemplation. A large export trade to Japan is being developed.

The dumping clause as regards steel billets will soon be in operation again, it having been suspended between July 24 and September 30, by a bulletin authorizing collectors of customs to grant permits for the importation of steel billets for use in rolling mills or forges, on payment of the ordinary duty, without special duty, subject to the condition that the quantity imported for any one such rolling mill or forge shall not exceed one-quarter of the total quantity of steel billets rolled or wrought by such mill or forge during the calendar year 1904—the quantity to be established to the satisfaction of the collector at the port of entry by a declaration by a principal official of such rolling mill or forge.

Companies Incorporated.

E. C. Atkins & Co. of Indiana have been authorized to manufacture, sell and repair saws, machinery, tools and other hardware articles in the Province of Ontario with a sure capital of $40,000. Charles D. Ten Eyck is to be the company's attorney.

SEPARATING WATER FROM GASOLINE.

FINE wire gauze will not remove water, but if a chamois skin pocket be carried by a gauze on either side and placed between the gasoline tank and the carbureter, all dirt and water will be removed. The arrangement should be on the order of the device shown in Fig. 1, so that the water may settle into a separator, and be drained off. The separator should be about 4 inches long and 2 inches in diameter. If this is drained each day no water will reach the carbureter unless the chamber becomes filled, which could only be occasioned by rain entering the fuel tank, as the gasoline itself of a

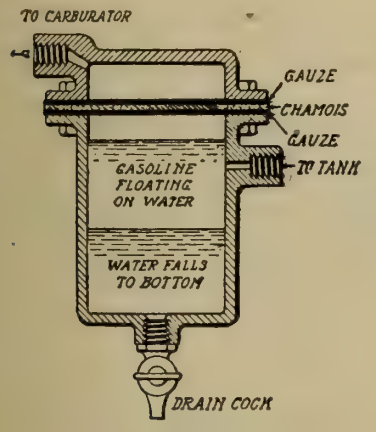

Fig. 1—To Separate Water and Gasoline.

day's usage would not contain that quantity. The strainer placed between the tank and the carbureter is better than one placed at the tank, for the reason that in the latter dirt and water would be forced through the tank strainers by the impact and weight of the fuel entering, while in a strainer placed between the tank and the carbureter the fuel is strained slowly, in fact as slowly as it is used. A first-class water separating strainer is shown in Fig. 2. At the bottom of the separating chamber is a needle valve. On this valve is a metallic float of such a weight as to sink in gasoline and just float in water. When

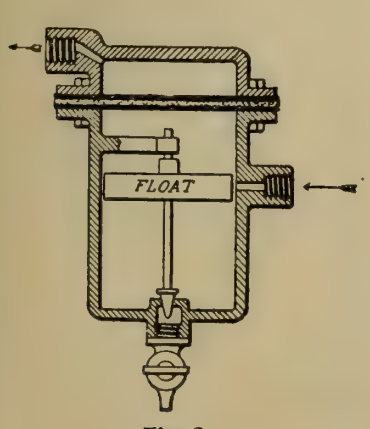

Fig. 2.

the chamber is filled with gasoline the valve is seated, but as soon as water collects the float is lifted, opening the valve and letting the water flow out until the gasoline comes to such a level as the valve seats. The device has the gauze and chamois strainer.—Motor Age.

BUILDING AND CONSTRUCTION

TENEMENTS FOR MONTREAL.

IN our list of Montreal building permits, published in the issue of September 9, appears the item: "H. Wener, Logan street, Papineau ward, dwellings, $48,000." Inquiries into the nature of the "dwellings" has developed the fact that the largest and most comfortable tenements on the North American continent are about to be erected in Montreal. The building, when completed, will shelter 116 families, providing each with five or six rooms, electrically lighted, and fitted with bathroom and modern conveniences. The flats will rent at $14, $15 and $16 per month, according to location.

The tenement is being erected by Mr. Harry Wener, manager of the Montreal Waterproof Clothing Co., who recently purchased for the purpose the entire block bounded by Logan and Lafontaine streets, and Wener and Papineau avenues. The project has long been considered by Mr. Wener, and he now has every confidence in its ultimate success. His idea is to build a tenement which can be made perfectly comfortable and homelike, without passing beyond the financial reach of the workingman, who is most in need of such conditions.

Two blocks will compose the tenement (one at either corner of the property) and the smaller of the two has already been commenced on the corner of Logan street and Papineau avenue. It will contain 48 flats, and should be ready for occupancy in February. The other block will, like the first, be built around three sides of a square, enclosing a central court, and will be 164 x 160 feet. It will have two large stores on the ground floor, and about 70 flats in all. Work on it will be commenced in a few weeks.

Mr. Wener reports that he already has more than 125 applications for flats in the new tenement, without counting any of the employes of his factory, who will, of course, be given the preference. The intention is to have a good class of tenants, so far as character and industry are concerned, and Mr. Wener firmly believes that proper arrangements can make life much more comfortable for the poorer people without demanding from them any more than a reasonable rental.

PAROID ROOFING.

An interesting exhibit at the Toronto Fair was the building erected in Machinery Hall of Paroid Roofing material, which is now in general use in factories, stores, dwellings, railway shops, etc., and is becoming very popular as a material for the construction of Summer residences. The accompanying cut is from a photograph of one of Findlay Bros.' foundry buildings at Carleton Place, Ont., that is covered with "Paroid" Ready Roofing, made by F. W. Bird & Son, of Hamilton, Ont.

F. W. Bird & Son have been in business at East Walpole, Mass., for 88 years, manufacturing special materials, and for over 25 years have been making roofings, waterproof building papers, insulating papers, etc. Their exhibit was a neat building, covered roof and sides, also floor, with Paroid roofing material. Thousands of people walked over what was on the floor, and the material does not show a particle of wear, looks as fresh as the day it was put down.

Paroid contains no tar, is slate color, lies smooth on the roof, is attractive in appearance, and requires no paint when laid.

To answer the growing demand in Canada, F. W. Bird & Son have purchased nine acres of land in Hamilton, and are now completing one of the most modern and up-to-date roofing plants on the continent. Paroid is sold largely through dealers. Write to F. W. Bird & Son, Traders' Bank Building, Hamilton, Ont., for samples and their proposition to dealers. We are sure it will interest you.

Building Made of "Paroid" Roofing.

BUILDING NOTES.

S. E. Whittam, Brantford, is erecting a $3,300 residence.

Porter & Son, Winnipeg, will build a large wholesale warehouse.

A $2,300 addition is being made to J. Cosgriff's hotel at Hamilton.

Dr. Francis H. Sterling is building a $7,000 residence at Victoria, B.C.

Mr. Johnston, of Bright & Johnston, is building a $10,000 residence at Winnipeg.

S. M. McKay intends erecting an expensive residence on the river bank at Winnipeg.

Tenders are being called for the erection of an electric light power house at Indian Head.

The works of the Canada Car Co., Cote St. Paul, Montreal, are rapidly nearing completion.

A new business block is being built in Forest, to be occupied by the Arcade Hardware Co., and other stores. The cost will be $8,000.

Louis Payette, the contractor constructing the Grand Seminary, Montreal, is fire-proofing it with cinder concrete and expanded metal.

Swan, Church & Co., contractors for the metal lathing in the Singer Sewing Machine Co.'s works at St. Johns, P.Q., report that the work is almost finished.

The Victoria Cement Co.'s works at Tod Creek, near Victoria, B.C., are being doubled in size, machinery being added to increase the output to 600 barrels daily.

The Grosvenor Flats, which were the scene of the long labor strikes in Montreal, are now almost finished, some of the contractors being already in shape to knock off work.

Harty & Smith's new hotel at Fort Frances is being erected. Another hotel to cost $17,000 is being planned, to be erected in the same town by George A. Graham, Fort William.

Robert Stewart, Guelph, has secured the contracts to erect several new buildings at Cobalt, amongst them being an 80-room hotel, a modern bank building and several residences.

Finley & Spence, architects, Montreal, are inviting tenders for the erection of a large Armory for the 5th Royal Scots, to be situated on Bleury street. The building will be an imposing one, containing drill hall, gymnasium, shooting alley, bowling alleys, and swimming baths.

The saw mill erected by the Messrs. Babbitt at St. Marys, near Fredericton, N.B., is about completed. The boiler and other machinery will be in working order in a short time. The new mill is 30 x 100 feet in dimensions, and will be equipped with the latest machinery. In addition to the mill there is being erected a neat office, blacksmith and machine shop, and a tenement house. T. E. Babbitt, the senior partner, is also erecting a handsome dwelling. Daniel Babbitt also proposes building a residence.

City Dairy Company, Limited, stable, reinforced concrete, College street, $25,000.

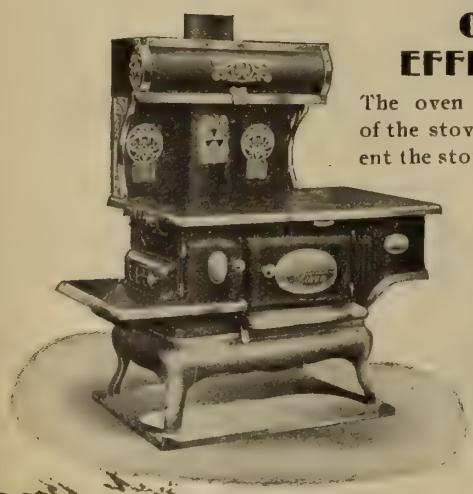
Our Safety Burner

The ALUMINUM OIL HEATER

Sales over the million mark solely through superior merit

Explosions are impossible in the Aluminum Oil Heater, because perfect ventilation and perfect combustion are secured by the liberal air passages on all sides of the wick and oil fount—see that safety burner: solid gallery, solid flame-spreader, no perforations there to clog up. No other oil heater has this grand safety burner.

No direct contact between oil fount and wick—a small tube feeds the wick only as much oil as it can take up instantly.



And the Aluminum Oil Heater is handsome in design and finish, thoroughly well made, and the only oil heater which can and does radiate the heat in every direction. Heats by radiation as well as by circulation. Get your orders in early—the demand is swelling larger and larger every week.

We guarantee every one.

OVEN EFFICIENCY

The oven is the "heart" of the stove. If it is inefficient the stove is "dead."

In

The Empire Queen Range

the highest degree of oven efficiency is attained. Heat is evenly and quickly distributed, and this does not mean, as with many other stoves, a lack of heat from the cooking holes. So you see **THE EMPIRE QUEEN RANGE** is a "sort" of "useful" stove—just the kind of stove enterprising dealers should handle. Information gladly furnished.

STOVES AND TINWARE

SOMETHING NEW IN TIN CANS.

DESPITE an old saying to the contrary, it is a fact that there is always something new in this world for some of us. That which may be new to some is perhaps old to others, but The Max Ams Machine Company, New York City, is making something in tin cans that seems to be new all the way through. Their system embodies an entirely new idea in canned food products, and successfully disposes of the present manner of soaking the interior and soiling the exterior of the cans with objectionable solder and acids. Heat is not required to fasten the tops and bottoms, and the holes are unnecessary. These cans are constructed on sound, sanitary principles, eliminating all the objectionable features now prevailing in other methods.

This method consists principally in applying to the flanges of the covers, by means of a "lining machine," an odorless, tasteless and non-deleterious compound and asbestos in such a manner as to make an absolutely airtight seam without the use of solder or acids ; making the cans cheaper, more attractive in appearance, and more durable than any on the market now used in processing food products of all descriptions.

Here are some of the purposes for which the new seam sanitary can is available : All kinds of fruits, both in syrup or water. All kinds of vegetables, all kinds of meats, dried, smoked or otherwise. All kinds of fish and fish products, dried, in oil, vinegar or brine. Syrups or molasses, honey, maple syrup, condensed milk, plum pudding, soups, butter, etc. Also all purposes where processing is not essential but an hermetically tight can is required, such as drugs, salves, teas, coffees, spices, paints, dry or wet, pastes, etc.

ENAMELWARE REGULATIONS.

THE Hungarian Government has issued an order intended to stop the employment of deleterious substances in the manufacture of enamelware and other articles used for the preparation or storage of food and drink. The order provides that the tin used for making enamel for cooking and drinking vessels, as well as in the manufacture of spoons, syphon-tops, tinfoil and tubes and fittings for wine and beer, etc., may not contain more than 1 per cent. by weight of lead. Suspected goods are to be tested by taking two samples and washing them, first in alcohol, and next in ether or chloroform. One of the samples is then to be moistened with 0.6 per cent., and another with 4.2 per cent. acetic acid, and left exposed to the air for twenty-four hours, after which they must be boiled for one hour with acid of the same strength respectively. The order does not apply to water-pipes in ordinary use. No enamel may be used for the manufacture of culinary utensils which, after an hiur's boiling in 6 per cent. acetic acid, gives a solution containing any trace of lead, copper, cadmium, arsenic, antimony, zinc, barium, or other poisonous metallic substances.

GURNEY COMPANY WINS.

AT Osgoode Hall last week Mr. Justice Magee handed out a consent judgment in the injunction proceedings instituted about two years ago by the Gurney Foundry Company against several trade unionists to restrain them from interfering with the company's employes or customers. The judgment is a victory for the Gurney Company.

The defendants in the case were R. H. Emmett, J. H. Barrett, of the Moulders' Union ; C. Kernish, C. Curtin, A. Stockholme, of the Stove Mounters' Union ; J. Slack, J. Acheson, of the Polishers' Union, and James Wilson. The judgment restrains them from publishing or circulating placards, handbills, etc., calling on the public to boycott the company. They are also restrained from "interfering with and intimidating the plaintiffs' workmen and agents, and wrongfully persuading them to break their contracts of employment with the plaintiffs and wrongfully preventing, procuring, or persuading workmen or agents from taking employment from the plaintiffs, and from wrongfully and maliciously watching and besetting the railway stations from the approaches of the plaintiffs' factory for such purpose."

The trouble between the company and the union dates back about two years, when there was a general strike, and the methods adopted by the strikers led to injunction proceedings being instituted.

FORT WILLIAM STOVES.

IN a recent interview Mr. Harold William, stated that his firm had Copp, of W. J. Copp & Son, Fort just shipped its first carload of stoves to British Columbia. Mr. Copp said the product of the foundry is limited on account of not being able to get the men they want. "We have now about 40 men and could easily use 15 more, but it seems impossible to get them, especially moulders. We have had to call in some of our salesmen because we are not able to fill the orders and I consider that a failure to fill orders does more harm to a business than anything else."

They have lately added a tinning plant to their foundry and are now making their own tin plates. Considerable saving is thus effected as they have to import the copper sheets and the duty is much less on them in an unfinished condition.

STOVE PIPE ELBOWS.

E. T. Wright & Co., Hamilton, have on the market what they claim to be the strongest and neatest stove pipe elbow ever produced. This elbow, (Cooper's Improved Patent), is having a very large sale, which is well merited, as each year this firm have been improving on their elbow until it is now perfected, and only wants the trial of the trade to prove its value. See their advertisement on this page.

Walker "Pilot" Steel Range

OUR MOTTO :

"Quality will be remembered when price is forgotten"

Dealer's Profits. The dealer's profit on the sale of a **Walker "Pilot"** is frequently double what the ordinary range affords, and the price to the consumer meets competition.

Cut showing ***Walker "Pilot" Range*** with High Shelf and Reservoir. Note handsome appearance obtained by adding the ***Walker Hearth Construction,*** an entirely new feature in steel ranges.

Quality. The **Walker "Pilot"** Range is complete with all modern and desirable features, and is properly and honestly constructed of the best material, and has proved itself satisfactory wherever sent.

Sales Assistance. We assist the dealer in every possible way in the sale of the **Walker "Pilot"** Range, and are ready at all times to work with them for our mutual advantage.

This Combination of **Profits, Quality** and **Sales Assistance** will easily permit you to control the Range Trade of your locality, and to build up a business larger than heretofore thought of, and a money-maker that will make your heart glad.

The Walker "Pilot" agent is going to be **the** stove-man of your town, therefore it will be well to obtain agency before it is too late, and order on a sample range for your floor.

If you have not got a copy of our catalogue on file, send for it. It is free and shows other money-making lines.

FINANCE

CANADIAN banking methods will show proof of their excellence during the next three months. In the United States, where the branch bank system does not exist, the annual consternation is on as to how the western banks are going to get enough money to move the crops. The banks throughout the west, on account of the small population of the towns, are small, and as the call throughout the year is for loans and the deposits are small, they have not sufficient capital to handle the business which is put upon them during the harvesting season. Various attempts are made by means of Government deposits to tide them over the next few months, but the farmers and merchants of the west suffer greatly from the difficulty in getting money.

This condition does not obtain in Canada at all. By means of branch banks the big banking institutions are enabled both to plant banks where they could not live independently and to supply these with unlimited money to meet any extraordinary conditions. Here, as in the United States, the greatest wealth is in the east. Thus here the branches in the east receive much more deposits than they have calls for good loans. On the other side, the branches in the west have calls for loans almost exclusively. Accordingly the east feeds the west, and good profit is made from both branches where a single bank in either place would have difficulty in living.

ASBESTOS SAD IRONS

AN IRON FOR EVERY PURPOSE

SENSATIONAL SAD IRON ADVERTISING

We are determined to make "ASBESTOS SAD IRONS" a household word throughont the country. EVERY WOMAN is our prospective customer, and we won't rest until every woman is convinced that she must have Asbestos Sad Irons.

In order to accomplish this result, we are spending thousands of dollars in general advertising. And for the benefit of the trade we offer

$1,000.00 in Cash Prizes

for the best local advertisements and Window Displays of Asbestos Sad Irons.

If any hardware dealer who reads this advertisement has not received the details of our Advertising and Window Display Contests, he should write for full information at once.

These contests have been planned for the benefit of the retail dealer. Every Asbestos Sad Iron that is sold passes through the hands of some dealer, who makes a good, clean profit on that iron. Are you coming in for your share of the sales?

The way to be assured of your share is by letting the people of your community know that you sell Asbestos Sad Irons. Enter our contests and you will get publicity, sales, profits—besides standing the chance of getting a substantial cash prize.

We take it that every hardware dealer is acquainted with the merits of Asbestos Sad Irons. If YOU are not, send for our complete descriptive booklet. Return the attached coupon and we shall immediately send the booklet and details of our Advertising and Window Display Contests.

Made also for Parlor

Three-Flue Base Burner

For Hard Coal

This stove is exceedingly heavy and durable, while the quality of the castings, finish of the nickel parts, ornamentation, close fitting of the doors, mica frames and all joints are of the very best workmanship.

Has been given a new and beautiful nickel dress, making the stove thoroughly modern in appearance.

The grates are a heavy duplex pattern, and are strong enough to grind up the hardest clinkers without breaking.

The fire-pot can be easily taken out by sliding the lower part of the magazine up and drawing the pot out through the front doors. Is replaced in the same way. The pot revolves, which saves continuous wear on one spot.

The three-flue construction, which is found only on this stove (others having but two flues), gives an increased radiating surface and produces nearly one-half more heat from the same amount of fuel.

Printed matter, including all our Base Burners, sent free to any dealer.

THE LAND OF GOLD.

WITH a golden harvest in the west ready for the reaping, golden prospects in every line of manufacture, winning golden opinions abroad as to her wonderful resources, whether of farm or forest, river or mine, surely this Canada of ours must be that land of promise, known in fable only to the ancients, where there would be peace and plenty and abundance for both man and beast. This much despised country of snow and ice, stunted pine trees and famished wolves, has come out from the shadow of ignorance and prejudice under which she has been unwillingly held by other people, and has emerged into the glorious sunlight of her own possibilities. The cry of the word gold from some inaccessible district where the metal is to be found has set the nerves of men tingling with excitement. They have forsaken wife and family, home and kindred and all attendant comforts, endured untold privations, famine itself, and dangers without end, all in the hope of gathering in a share of the yellow metal. This happened so recently as to be still fresh in the memories of all, and yet these very men in getting to the Yukon passed through a country where more gold awaited them than has up to the present been found in the richest mining discovery known to man. In the best year that the Klondyke has seen much less gold was produced than will this Fall pour into the pockets of the fortunate farmers of the west. Fifty million dollars is the conservative estimate placed upon the value of the wheat crop alone now being harvested, and this to be divided, comparatively speaking, among a small number. Why does humanity allow men to live in misery and squalor and want in the slums and hovels of great cities, when they might be independent and happy and enjoy the sunshine and gladness of our unspeakably great and incomparably golden western land?

No less an authority than the New York Wall Street Journal predicts that the centre of the next great world movement will be in Canada, a prime agent in connection with which will be the new transcontinental railway with termini on the shores of the Atlantic and Pacific Oceans. When the cost is considered, which is estimated anywhere from $150,000,000 to $200,000,000, it must be realized that the spending of that amount alone will mean much in the next five years in Canada. Aside altogether from benefits which its construction will bring to Canada, through the opening of an entirely virgin territory to settlement and production, the mere fact that such an enormous sum of money is to be expended in the country, largely in the shape of wages and for supplies which will be of home production, is a sufficient guarantee of great general prosperity during the period of building at least. But when it is considered that the present wheat-producing capacity of the Canadian west is only two per cent. of the equally good growing land which will be thrown open to cultivation by the construction of this great national undertaking, the possibilities are simply staggering. It means that within ten years the production of wheat in Canada will be limited only by the ability to find the labor to cultivate the land and handle the crops. This development means a coming economic change which must be taken into consideration as a world's factor. Canada is now producing about one-sixth of the wheat raised in North America. Her new facilities will increase her ability so vastly that it is evident that she will before many years control the grain markets of the world, and in that fact there is much food for thought for the agriculturist of the United States.

Only second in importance to her wheat production, if indeed it long remains second, will be the return promised from the forests and mines, now practically inaccessible, but to be opened to the world with the completion of the Grand Trunk Pacific Railway. So far we have referred only to the building of the main line of something less than 4,000 miles, but it is the purpose of the Government of the Dominion to build innumerable branches, so that the most remote parts of the main line will be brought into touch with the existing railroads not only of Canada, but of the United States. One of these lines is already under construction—from Toronto to Lake Temiskaming, about 300 miles north in a straight line from the city on Lake Ontario.

Everything indicates that Canada is full of mineral—the precious metals, coal, iron, copper, tin, nickel, phosphates, and, in fact, everything that the requirements of the world demand abound, to say nothing of oil. These fields are thus far untouched. How valuable they are may be gathered from one accidental find on the Temiskaming Railway at Cobalt. Granting that there may be exaggeration about the glowing reports from this district, it must be admitted that sufficient has been shown to raise the hopes of Canadians that this hitherto unexplored country may prove an Eldorado. At least enough has been found to justify scientific search for precious and other metals, and it must be confessed that the mining history of Canada warrants the most thorough exploration. How greatly this will be accelerated by the construction of the new road needs no argument to prove. Important finds of oil and coal have already been announced by the surveying parties, and altogether there seems to be good reason for the optimism which prevails in Canada at the present time.

THE TARIFF COMMISSION.

WINNIPEG has been the scene of a meeting of the recently appointed Tariff Commission, but in point of numbers the sessions were not a very marked success, the people of the prairie section being now too absorbed in the problem of harvesting the wheat crop, and the matters incidental to this problem, to devote much thought to the oft-discussed question of protection versus free trade.

Advocates of both of these principles presented their views to the Commission, however, and Hon. Mr. Fielding has learned that the western farmers and merchants take a different view of the tariff problem than the eastern manufacturer.

Mr. Walter Martin of the Tilden-Gurney Company told the Commission that the importation of cheap American stoves was killing the Canadian trade, and declared that unless something was done Canadian manufacturers would be out of it. He favored a tax of $2 or $2.50 generally on stoves in addition to the 25 per cent. on those now being brought into the country. Mr. James Drew of the Gurney Foundry Company of Toronto, spoke in the same vein. Mr.

Ashdown, the large hardware wholesaler, however, opposed the views of Mr. Martin and Mr. Drew.

Mr. Ashdown also took strong exception to the dumping clause of the Customs Act, and said it sometimes left a dealer in doubt as to what his goods cost him until after he had fixed his price and sold them. He cited experiences in buying earthenware, and said he considered the dumping clause is a hold-up, and would sooner pay the difference in the cost to the American manufacturer than to the Canadian Government. As a choice of evils he would sooner have a higher tariff than the dumping clause. He asked that if it be continued a higher margin between the home and the export price than five per cent. be allowed, and that Canadian dealers be given some allowance for freight like the American dealers. He reminded the Commission that the stove representatives had spoken for the manufacturers. "A great body of our people are consumers," he added, "and are interested in lower rates of duty. The farmer has to compete in the market of the world with his produce, and he naturally thinks there should not be more duty placed upon imported goods than is necessary for purposes of revenue. When you go so far as protection you get beyond revenue. In a large number of cases the present tariff is beyond a revenue tariff. I would ask that the duty be not increased, but, on the contrary, whenever it is beyond the revenue-producing basis it should be lowered."

TOOL MANUFACTURING IN CANADA.

NEGOTIATIONS of notable significance and of great importance to the hardware and machinery trade are approaching culmination.

The Niles-Bement-Pond Co., one of the largest machine tool manufacturers in the United States have secured a controlling interest in the John Bertram & Son, Limited, of Dundas, Ont. As the negotiations are not yet fully completed it will be impossible at the moment to give full details of the changes likely to result from this development, yet Hardware and Metal has learned from official quarters that one result of the change will be that Niles-Bement-Pond tools will be made in Canada in the Bertram works. This will mean the erection of several new buildings at the latter works, and it will probably result in an increase of fully 100 per cent. in the number of men employed at the works in Dundas, and an even larger increase in the output from that concern.

The causes that have led up to this development can be said to date back even as far as 1864, when the firm of McKechnie & Bertram was established in Dundas, Mr. John Bertram being the junior partner. While the tools at first made by this concern were somewhat crude as compared with the present output, great care was taken from the start to make every machine rigid and of great strength. The result has been that an enviable name has been built up, and to-day the firm have the reputation of making a line of machine tools which combine in a most satisfactory degree the rigidity of British tools with the up-to-date features of American productions.

The John Bertram Co. have from the start kept in full touch with the progress in machinery construction the world over as well as with industrial progress in Canada. The result has been that they have been to a large degree successful competitors for business when large orders, such as the Canada Foundry Co., and C.P.R. shops, have been on the market.

Niles-Bement-Pond Co. have also, in recent years particularly, been paying much attention to the Canadian market, and have, when heavy tools were desired, probably been the most successful tenderers among the U.S. concerns for business in Canada. They have, however, been greatly handicapped by the duty of 25 per cent. on their tools, as well as by the stiff competition of Canadian firms. As the American firm is exceptionally strong financially, they followed the inevitable course of seeking arrangement with the strong competitors in Canada which would enable them to compete for business in this market more effectively. These negotiations have culminated in the purchase of controlling interest in the Bertram works.

Now the two organizations will be combined to insure greater efficiency in both production and sale in Canada. So far these has been no change personally of the Canadian organization, and as far as can be learned no vital changes will be made. Fuller details will be given in a later issue.

CANADIAN TRADE WITH ASIA.

THE close of the war in the East will undoubtedly bring about a great commercial development in the countries which are immediately interested.

Japan, Corea, China, through Manchuria, will all be heavy buyers of raw and manufactured goods. A great share of this business should come to Canada. We already have a foothold in the East and with careful cultivation the market possibilities there should prove unlimited.

During the year ending June, 1905, Canada exported over $2,000,000 worth of goods to Japan, China and Corea. There is not one of the items in that list which could not be indefinitely increased. The principal items are cotton, flour, canned salmon and other fish, leather and its manufactures, metals and their manufactures, provisions, lumber and wood pulp. In every case the consumption is large and Canada is in the best situation to supply the demand.

Our transportation facilities are better than those of the United States as the boat trip from Vancouver is two days shorter than from any American port. Moreover, in China at the present time there is an intense prejudice against everything American. This should place Canadian products on a still better basis.

Manufacturers would do well to look into this market carefully. There is no doubt that unbounded propserity will follow the opening up of new provinces and countries to Japan's enterprise.

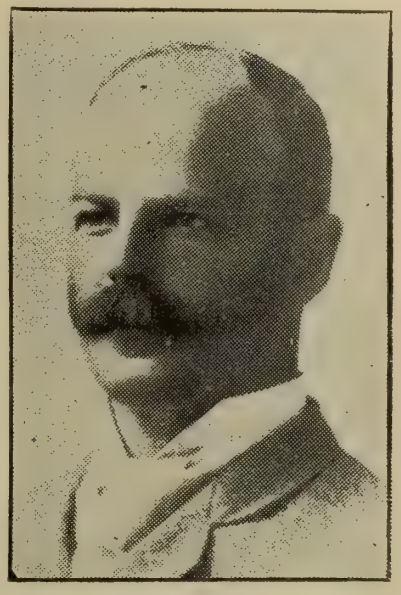
When the great numbers of men whom Japan has kept in the field during the past two years are turned to peaceful avocations and the regular business of the country is resumed, there will be a great call for foreign manufactures.

SCREW THREAD STANDARD.

GOOD work is being done by the Engineering Standards Committee of Great Britain and if suggestions made in a recent report issued by that body are carried out it will result in the abolition of various discrepancies of practice which have been annoying to engineers and mechanics using screwed bolts and pipes. The report issued relating to this matter is not yet complete as the final standardization involves the further collection of data relative to the gauging of screw threads and plain cylindrical surfaces. It was found, however, that the pitches originally formulated by Sir Joseph Whitworth meet general requirements, hence they were incorporated in tabulated form in the report. However, it is universally admitted that the finer threads are desirable in certain cases, so that a second table has been prepared relative to fine screw threads. For screw threads of less than ¼-inch diameter the dimensions recommended by the British Association Small Screw Gauge Committee have been adopted. A point not definitely settled was a decision regarding the best means of securing interchangeability between male and female screws.

THE ABUSE OF CREDIT.

THE credit system as an institution is probably one of the few things which must ever remain with us. In its use it is one of the greatest conveniences of commerce. Abused, it becomes at once a positive curse, and the toughest problem of business.



Constantly our attention is being directed to troubles arising from the abuse of the credit extended by enterprising storekeepers in their anxiety to secure an increase of trade. The storekeeper is often at his "wits' end" to scrape together sufficient cash to satisfy his wholesale men, whilst at the same time a glance at his accounts reveals a satisfactory balance. The reason is his inability to effectuate collections.

It is almost impossible for the country store to arrange prices to compensate for the extent of credit expected. Prices are, to a large extent, public knowledge. Almost all commodities of daily consumption are quoted periodically in the daily papers, and the people who want credit are keen enough to keep their eyes on these quotations, besides which the issuing of catalogues, etc., from large departmental stores, is a fruitful means of keeping the country districts posted with the latest lowest prices, based on the principle of "cash with order." It is a most remarkable fact that among these very people who expect low prices are found many large and prosperous farmers. The result to the storekeeper is most disastrous. He has to supply his goods in competition with these cash terms, and is expected to allow the payment to await the convenience of the farmer, which often means until his crops are harvested. Even to this many a storekeeper would not raise objection, for he can easily negotiate the note of a well-to-do farmer. Our information, however, tells us that the farmer's attitude to his store account is one of great injustice. With his other accounts, such as implements, etc., he has to show a measure of regard. The large firms who run such businesses are not as easy as our amiable and friendly storekeeper; they secure themselves pretty soundly by holding a safe lien until the last final payment. In addition, too, they cover their debt by a note, carefully stating a substantial interest for any future extensions in part or whole, generally never less than 7 per cent. The farmer, therefore, is much more likely to let his "store" account slide in favor of the ever-increasing implement "note," really using the storekeeper's money to pay his implement account. Now this, on the face of it, is a gross injustice, and one that cannot be taken up too strongly.

Our retail friends in Manitoba and the Northwest are about starting a campaign to put down credit entirely, owing to the injustice experienced and to the impossibility of getting prices equivalent to the credit enforced by their customers. We wish them every success.

HARDWARE MERCHANT CHOSEN.

SINCE the change of Government in the Province of Ontario Hon. J. P. Whitney has honored two of the Province's best known hardware merchants with public office, the Hon. Frank Cochrane, of Sudbury, having been taken into the Cabinet as Minister of Mines, and Mr. Edwin R. Rogers, of Toronto Junction, known in all parts of Ontario as the president of the hardware section of the Retail Merchants' Association, being appointed Inspector of Prisons and Public Charities to fill the place made vacant by the resignation of James Noxon.

Mr. E. R. Rogers,
Inspector of Prisons and Public Charities.

The newly-appointed inspector was born in the county of Peterboro, in the village of Ashburnham (which now forms part of the city of Peterboro), some forty odd years ago. His boyhood days were spent there and he was educated at the Union School and from there passed through Trinity College School, Port Hope. Deciding on a mercantile career Mr. Rogers entered the dry goods business in Toronto in 1876, spending two years there and going to Uxbridge in 1878, where he was engaged in the hardware business.

From there Mr. Rogers turned his way westward in 1882 and entered the employ of J. H. Ashdown, hardware merchant, in Winnipeg, where he remained two years, going on to Calgary, where he engaged in the hardware business for five years, then accepting the position of clerk of the supreme court of the North-west Territories at Calgary, Alberta, leaving there in 1898 for Toronto Junction, where he has been engaged in the hardware business for the past seven years.

Mr. Rogers has been actively interested in athletic sports of all kinds, and has done much to forward the interests of the several clubs where he has resided. He is a son of the late Robert Rogers, who was a defeated Conservative candidate in East Peterboro in the late 70's and a brother of R. B. Rogers, superintending engineer of the Trent Valley Canal, and Colonel James Z. Rogers, R.O. 57th Regiment. He is a son-in-law of Henry Pellatt, Toronto. During the last Provincial elections Mr. Rogers was financial agent for the Hon. J. W. St. John, Speaker of the House, and was appointed license commissioner.

The duties of the position of Inspector of Prisons are being rearranged, the plan involving the doing away with the old scheme of each inspector having a certain amount of control over specific institutions, and the adoption of the direction of all the business connected with the institutions from the offices at the Parliament Buildings. Thus Mr. Rogers, who is a business man of experience, will have charge of the purchasing of all supplies for institutions under direct Provincial control. This will relieve bursars of much of their present responsibilities and work, and it will also, it is believed, enable the department to dispense with several assistant bursars and storekeepers, whose places will not be refilled.

The responsibility of Mr. Rogers' position, the purchasing of about $1,000,000 worth of supplies annually for the institutions under his care, is very heavy and it is his intention to dispose of his business as soon as a suitable purchaser is found. His retirement from the retail trade will be a distinct loss as he was one of the most enterprising retailers in the Province and one of the most active workers in endeavoring to organize the retail hardwaremen into an association for mutual protection and advancement. His experience in this direction is that much better results will follow from the form of organization existing in Manitoba and the Northwest, where the hardware trade is organized on an entirely separate basis from other retail merchants, than the system tried in Ontario which has the trade organized as a section of the Retail Merchants' Association. Mr. Rogers has followed the work of the Western Hardware Association in their reports in Hardware and Metal closely and he commends their work highly.

Mr. Rogers' position will bring him in close touch with hardware merchants, a large portion of the million dollar expenditure under his control being for hardware, plumbing and heating supplies, and his long experience and knowledge of the trade will make him a valuable man for the important position he has been chosen to fill. The best wishes of the publishers of Hardware and Metal, and of the trade generally, will go with Mr. Rogers in his new sphere of labor.

Echoes of the Canadian National Exhibition at Toronto

CANADA'S National Exhibition is over. The great fall Fair broke all previous records for interest and attendance. The weather of course could not have been improved upon. The special attractions were such as to astound us, great children that we are, and back of it all there were the substantial exhibits, wonderful and convincing proofs of the greatness of this young Dominion and vital with suggestion of the magnificent future that lies before us.

After all, the human element is the most wonderful and interesting feature of Canada's National Exhibition, and as the exhibits approach in their perfection and potentiality to man himself, so they grow in interest to the eager crowd of men and women who flock each year to Toronto to see and know the new thing that the subtle mind and conjuring hand of the inventor has brought into being.

Year after year the indefatigable directors search out the length and breadth of the land for new special attractions, and here again the human interest shows its strength. A prince of the blood, a Chinese potentate, the Irish Guards Band, or a regiment of American soldiers on a friendly visit, are the attractions that bring out the people by the hundred thousand and work up their enthusiasm to the cheering point, and who will forget who has once heard the ringing cheer of 25,000 or 30,000 of enthusiastic humanity stirred to the depths by the sight of a splendid human spectacle.

But were one to consider it, what is more interesting and wonderful at the great Exhibition than the very people who flock perennially to see and admire the wonders of which they themselves constitute the chief part?

With every year the crowd grows and will continue to grow, not merely because of the merits of the Exhibition, great as they are, but because we all, admit it or no as we will, want to be with the crowd. It is an established fact that if you let it be known that a crowd will be at a certain place at a certain time, the crowd will assemble of itself and find amusement of its own devising.

Canadian National Exhibition—Dodge Shafting and Pulley Exhibit.

Of the first importance both from the points of attractiveness and educative influence were the exhibits in the Process Building, this year more extensive than at any previous Exhibition. It was difficult most of the time to make your way past the crowds held interested against the railings where swiftly driven machinery was turning out manufactures of various kinds with a celerity that was amazing and an accuracy beyond praise.

In the Manufacturers' Building the drawn and fatigued appearance of the attendants as the Exhibition drew to a close showed how severe the tax had been upon their energies. The demonstrating plan was everywhere adopted and you were invited to try this dainty or sample that food product to a degree that threatened you with acute indigestion should you yield to a tithe of the invitations extended.

It was in the Stove Building, however, that the hardware visitor found himself most at home, the many magnificent displays made by the manufacturers, together with the steady advance made in the introduction of new ideas and improvements being sufficiently interesting to induce the progressive retailer to spend some hours amongst the products of the foundries on exhibit. Next to the Stove and Manufacturers Buildings, Machinery Hall was the most interesting spot for hardware and metal merchants, and on the grounds and in the other buildings were also many attractive displays which were inspected with interest by hundreds of readers of Hardware and Metal.

Dodge Bearings as Power Savers.

As usual the Dodge Manufacturing Co., of Toronto, make an attractive show of power transmission machinery in Machinery Hall. A new feature of their exhibit this year was a practical demonstration of the small amount of power actually required to drive shafting with ordinary babbitted bearings when both the shafting and bearings are properly

finished and properly erected. A heavy steel shaft loaded with large pulleys is set up in Dodge Ball and Socket Hangers which are fitted with regular Dodge Self-Oiling Bearings (the good kind), the whole being driven at a high speed from a pulley on the line shaft above, by means of a very fine silk fish line. This was very interesting to many mechanics and power users who at first thought the Dodge Company had gone in for some new fangled sectional bearing, but when they were shown how little power there is really lost through journal friction, "under proper conditions," some of them opened their eyes, especially when they read the following card which accompanied the exhibit:

"Authorities state that in a properly designed shafting equipment the loss in power by journal friction should not exceed ten per cent. and by no means or method is it possible to reduce this loss by more than ten per cent."

And as one man of experience said, "If I saved the whole thing I wouldn't be saving much judging from the way that thing works." The Dodge Company are inviting power users to consult them on the "bearings" question.

Canadian National Exhibition—James Morrison Company's Display of Plumbing and Electrical Fixtures.

Brass and Electrical Goods.

Sparkling with brilliance from hundreds of lights in beautiful brackets, chandeliers and lamps, the exhibit of the James Morrison Brass Mfg. Co., Limited, was one of the most striking in any of the buildings, and certainly was the centre of attraction in Machinery Hall. Three classes of goods were shown, one end being devoted to plumbing goods, the other to brass goods and engineers' supplies, the walls and ceilings being used to show to advantage the beautiful electrical, gas and combination light fixtures manufactured by the company's experts.

The collection was most complete, and the various designs represented the latest creations. Special attention was given to the array of dining room fixtures, while lights for drawing rooms, halls, dens, etc., were also shown. The house fixtures were shown in brush brass, antique brass, copper, oxidized and gold lacquered finish, and the lights were enclosed in bulbs and various shapes of art colored glass, the color effect and design being in advance of anything heretofore shown. Some newel post and table lamps in the form of bronze figures were particularly attractive. The most beautiful of all, however, was a running fountain for the conservatory, its design being very original, and five colored bulbs being used to diffuse their rays through the running water.

In the plumbing section one closet was shown working automatically under the Quinn flushing valve, the operation of the device being exceedingly simple. Two others were fitted with the Nethery flush valve, one being under direct and the other under tank pressure. The "Astoria" closet, a feature of which is that there is always water in the bowl, occupied a prominent place. A marble slab, deeply countersunk, with plate glass mirror back, was probably the most attractive fixture in this section, it being one of the finest pieces of work ever done in Canada. It is fitted with a combination Primus waste for hot and cold water. Two other articles which attracted a lot of attention were an iron enamelled French bath with four inch roll rim, nickelplated fittings and porcelain handles, and a nickelplated shower bath with silk curtains. Combination shaving glasses on a nickeled stand completed the display.

Brass manufactured goods are shown in profusion, and the selection made for the exhibit comprised some of the most modern articles in brass on the market. The Heinz steam trap, a great steam saver, came in for much attention. An hydraulic gasoline torch for brazing was on exhibition and proved a great drawing card for those interested, also the J. M. T. valves and automatic injectors, Hancock inspirators, ship-telegraph gongs for single and twin engines were also shown complete.

Charley World, the company's popular traveler, was in charge of the exhibit, and genial Fred Armstrong and Arthur Betton were also in attendance to hand out pretty blotters to the ladies and the "glad hand" to customers.

Canadian National Exhibition—The James Morrison Brass Manf'g. Co.'s Brilliant Exhibit.

Huron Stoves and Ranges.

The Huron Red Hot Furnace for hard coal, soft coal, wood or coke, manufactured by the Western Foundry Company, Limited, Wingham, attracted a great deal of attention from stove and hardware dealers who visited the Stove Building at the Exhibition. It is a coal furnace, but, having a very large feed door, is convenient for wood burning. A general utility furnace, one, at least, that gives perfect satisfaction, is a rarity, but the Huron furnace fills this exacting bill in every particular. The Huron is built low and is, therefore, especially useful in low cellars. It is easily mounted, and, in short, is powerful, economical and superior. The Huron enjoys a rapidly growing patronage.

The Huron Steel Range for hard or soft coal or wood is a range of unquestioned superiority, beautiful in design, elaborate in ornamentation and perfect in construction. In addition to these points the manufacturers claim for it that it contains many features of merit that are new and desirable.

The "Crown Huron" is a new range fresh from the pattern shops, and especially designed to fill the demand for an up-to-date medium sized cooker with all the desired modern appliances. It is very moderate in price, and just suitable for such households where the larger and more expensive ranges are not needed. It has plenty of nickle ornamentation, and a full set of nickle bands, nickeled oven panel and shelf and nickeled pot shelves, etc., and therefore has the appearance of a much more costly range.

The manufacturers claim that the ordinary sheet flue does not heat the oven bottom evenly, this being the reason why ranges do not bake uniformly. The shortness of the fire travel is also said to consume a great quantity of fuel. In the two flue used in the "Crown Huron" the heat is evenly distributed, consequently the oven will always bake the same on every part, and owing to the fact that the heat travels completely around the oven twice before passing out of the smoke collar, the heat units generated in the fire box are consumed before being lost by passing up the chimney, with the result that it is possible to do the same amount of work as in a sheet flue range on a considerably less amount of fuel.

In addition to these lines the Western Foundry Company manufactures the "Art Huron" base burner, a stove of which it is justly proud, and other lines such as hotel steel ranges. Correspondence is solicited from hardware merchants.

Canadian National Exhibition—Exhib't of Western Foundry Co., Wingham.

Perfect Idea Ranges.

The Guelph Stove Company's display in the Stove Building was handicapped from the insufficient amount of space allowed, but the company made the most of this with a very handsome display, their new "Perfect Idea" range being one of the most studied and admired stoves at the Exhibition. The detachable nickeled rim, easily removed for blackleading when cleaning, is a strong feature of the ornamentation. The high shelf, high closet (steel), water-front and gas attachment (two lids) are all points worthy of emphasis on the "Perfect Idea." Other lines shown in the exhibit were the well-known Kelly furnace, Grand Idea base burner, and New Idea hot blast.

Exhibit of Dominion Belting.

Large maple leafs characterized the belting exhibit of the Dominion Belting Co., Hamilton, in the Machinery Hall. It consisted of three large piles of their "Maple Leaf" stitched cotton duck belting, tapering from bottom to top in different sizes. The dressing made specially for this belting was also on exhibit, the whole making a neatly arranged and interesting display.

"Maple Leaf" belting is made from duck specially woven for this firm, and contains the least possible stretch with the greatest consistent strength. It is machine folded and lock stitched with special strong cord, each row of stitching being entirely independent of the other rows. The belts are waterproofed and are rendered impervious to steam, oil or gasses, and remain flexible under afl conditions. It is uniform in weight and can be made any length desired without joints, endless belts being a specialty.

This belting is manufactured with machinery of patented design, gotten up by the company, and there is only one style of belting made by them, the "Maple Leaf." For main drives and heavy work such as lumber mills, brick-yards, mines, etc., "Maple Leaf" belting is specially efficient. During the last year the company have done a very large business in main drive belts. For this purpose the company claim that the "Maple Leaf" is the surest belting on the market. During this season they have sold over 200 belts in the 12 to 30 inch sizes. Until they started three years ago the Dominion Belting Company claim that the production of belting for main drives was in an experimental state, but since then

"Maple Leaf" makes a sure drive. "Maple Leaf" belting is now stocked by hardware merchants from the Atlantic to the Pacific and in all sizes.

What users say for an article is very significant, and any wishing to get a book of testimonials should apply to the Dominion Belting Co. Among those who give flattering testimonials are : Laking, Patterson & Co., Hamilton ; Imperial Paper Mills of Canada, Ltd., Sturgeon Falls ; the Good Roads Machinery Co., Ltd., Hamilton ; the Lachute Shuttle Co., Ltd., Lachute Mills, Que. ; Wm. Laking, Haliburton, Ont. ; F. W. Fearman Co., Ltd., Hamilton ; the Dowswell Mfg. Co., Ltd., Hamilton; Canada Linseed Oil Co., Ltd., Montreal, and others.

N. H. Walker and R. N. Rose had charge of the exhibit, their geniality making many friends for their company as well as leaving possible customers with a favorable impression of the goods.

Canadian National Exhibition—Dominion Belting Exhibit.

The "Empire" Stoves.

The Canadian Heating and Ventilating Co., Limited, of Owen Sound, had a splendid display of their products in the Stove Building, the arrangement of the display being in the nature of a semi-circle with the "Empire Queen" range as the centrepiece. Grouped around this in neat fashion were the "Empire King" furnace, the "Empire" steel range, the "Empire Ideal" baseburner, and the "Empire Oak." All of these lines are winning great favor, and contain many features which the dealers find to be strong talking points to customers in both town and country. The Empire Ideal Base Burner is one of their most popular lines, and is handsome, modern, perfectly fitted with first-class stove flue construction. The flues are made of heavy, soft sheet steel, entirely separated from one another, from ash wall and from back plate. Cold air is taken in at bottom and circulates around entire circumference of both flues, against ash wall and against back plate. Its heating capacity is greater (with less fuel) for these reasons than any other base burner on the market.

Every stove has double heater attachment, large base heating circular flue, screw draft, removable fire-pot and feeder, improved duplex grate and shaking ring, in addition to all the features usually found in the highest grade base burners. The nickeled parts are swing cover, dome, corner scrolls, name plate, rails, base and legs, entire ash-pit door, knobs, turnkeys, and hinge-pin tips. Made with or without oven.

Dealers wishing territory should communicate with the company at once, as prompt action will be well repaid by future results.

Canadian National Exhibition—Empire Stoves, Ranges and Heaters.

Blackwell's Varnishes.

On the eastern balcony in the Transportation Building stood an exhibit of more than passing loveliness, not only on account of its unique beauty, but because of the surpassing quality of the material employed. It is a well known fact among decorators and paint makers that white enamel that is a true white is the most difficult of all colors to produce. There are many so-called whites, but, on examination, one finds them bluish white, greenish white, and the most common of all, yellowish white.

James Langmuir & Co. have brought the enamel part of their business to perfection, and their exhibit was an attestation of that fact as it stood a monument of glistening white, "As pure as snow, as chaste as ice," but with a soft, liquid brilliancy that reflects the high character of that material and proclaims the truth that "Homolite" Enamel is the white enamel par excellence of this continent, and as one of the catchy little verses informs the beholders :

Canadian National Exhibition—Exhibit of Blackwell's Varnishes in Transportation Building.

"If you would live in spotless town,
No porch should e'er be green or brown.
No other color should be seen
Than Porch White with its silken sheen."

Porch White and "Homolite" are destined to have a great sale in this country, if one is to judge by the large number of orders which have been taken for them by the salesmen in charge of the exhibit, and the many comments of admiration made by visitors. And as one decorator tersely remarked, "You have a line of goods that you have not to create a demand for. The decorators of this country have tried everywhere to get a white enamel like what you are producing, but have signally failed. The demand is here, all that you have to do is to supply it, which you evidently can do. I am going home now to tender on a contract for white enamel work that I refused to tender on before because it has to be white, and I despaired of being able to fulfill the requirements, but with your "Homolite" Enamel I can win out and do work that will do me credit."

Many such expressions were heard on every hand, while the firm were being constantly congratulated on the extraordinary whiteness and beauty of their exhibit and its attractiveness. Architects and decorators vied with each other in expressing their admiration for the delicate beauty and beautiful gloss of porcelain-like "Homolite," while the ladies became enraptured over it, everyone of them having parlors or rooms, furniture or mantles, or chairs that they were going to have enameled with Homolite. The poet of the James Langmuir & Co., Limited, catching the fever of enthusiasm, on the occasion of his visit to the exhibit, brought forth the following verse as most fitting the circumstances :

When dainty maids forsooth would please,
They robe themselves in snowy white.
And so, with minds at perfect ease,
We offer you our "Homolite."

Nor are dainty maids the only ones who recognize the fetching qualities of snowy white. As all who visited the Manufacturers' Building are aware, the T. Eaton Co.'s exhibit, perhaps the most costly, as it certainly was the most magnificent, exhibit on the grounds, was finished with the snowy white "Homolite." Whatever that celebrated company undertakes is completed with that thoroughness and attention to detail that have made their name synonomous with perfection, as they are never satisfied with any but the best productions. The selection of "Homolite" for their exhibits is a compliment that the James Langmuir & Co., Limited, were quick to appreciate, and they have not failed to direct the attention of visitors to the splendid character of their displays and the superiority of the finish of their stands.

Although James Langmuir & Co., Limited, are a new firm in Canada, Mr. James Langmuir, the president, is not unknown to fame among the paint manufacturers of Canada, owing to his long connection with Harrison Bros. & Co., of Philadelphia, of which well-known house he was vice-president. Consequently, he is one of the best posted, technically and practically, among the paint producing fraternity on this continent. The skill, knowledge and enterprise possessed and acquired in a long, active administrative life in the United States he is now bringing into force in his native country and city, and the paint consuming trade at large can rely upon receiving from James Langmuir & Co. the fairest possible treatment and the finest productions that accumulated wisdom can make.

Canadian National Exhibition—Page Wire Fence Exhibit from Rear.

The most attractive features of the exhibit were the doors done in cabinet polish varnish, one of them being done two years ago, and without preparation of any kind appeared to have been varnished only a few days. Several ordinary house doors finished in very high lustre interior Amborine varnish also attracted a lot of attention. A variety of gums and samples of varnishes in bottles and tubes were also shown, while the entire exhibit, stand, pillars, railings, etc., was done with "Homolite." The company's desire to meet the trade in the outlying districts met with very gratifying results, large numbers visiting the exhibit.

Page Co.'s Log Cabin.

For genuine originality there was nothing on the grounds to outclass the log cabin constructed of wire fencing and gates manufactured by the Page Wire Fence Co., Walkerville. Situated on the lake front, near the Manufacturers' Building, the log cabin was a centre of attraction, particularly for farmers and for hardware dealers who find wire fencing one of their best selling lines.

The structure was constructed entirely of Page products, the walls being made of large bundles of the White Brand Page Fencing, while the doors, windows and roof were formed of gates.

In addition to the cabin the display included a large number of gates of various types, including both plain and ornamental scroll designs, the whole being surrounded by a Page wire fence, 10,000 miles of which are in use on railways, and, according to the company's representatives, more miles of which are in use than of any other kind.

As an added protection to wearing qualities of the wire, Page fencing and gates are coated with white enamel paint. Zinc lead is used. This not only helps to preserve the wire, but the white makes the goods more sightly, and greatly improves the appearance of property which it encloses.

To the hardware trade the white brand has a special significance. Enterprising dealers take pride in giving the goods a prominent place in their stores, for, unlike plain, the white gives a decided showy appearance.

Dealers handling "Page" goods are in a position to meet the requirements of all their trade, because of the many different styles they manufacture in both heavy and light weight fences. The Page Co. also makes poultry netting, metal gates, window guards and lawn fences—in fact anything in fancy wire and iron work. Besides their head office and factory at Walkerville, the company has branches at Toronto, Montreal, St. John and Winnipeg.

Canadian National Exhibition—Exhibit of Mantles and Lighting Fixtures.

Canadian National Exhibition—Front View of the Page Wire Fence Company's "Log" Cabin.

"International" Gas Lights.

The exhibit of the International Gas Appliance Co., Limited, of 25 and 27 Richmond street west, Toronto, was a source of attraction to the visitors at the Canadian National Exhibition this year and the amount of interest shown in their new "International" light will be reflected in enquiries for these lights from hardware dealers. This light is premier among a host of lights that have been introduced to the trade during the past year. It is economical in consumption of gas and prolific in light and at the prices quoted to us by their representative they should certainly prove a leader with every dealer in gas appliances.

Their exhibit also included a comprehensive set of samples illustrating the various stages in the manufacture of their mantles. They have equipped their factory with the latest type of machinery and engaged the most experienced help that can be obtained and the results are in accordance with the care

and precision expended on their productions, and it is highly gratifying to notice that Canadian mantles can more than hold their own in price and quality with the imported article. The company is comparatively a young concern and since their first exhibit last year when they were awarded a medal and diploma have made wonderful headway and by the untiring energy and courtesy of their manager, Mr. W. M. Campbell, and his staff of assistants, the company has forced its way to the front and holds a strong position in its own particular line. Their travellers carry a full line of samples which we commend to the notice of our readers.

Most of our readers are in some way interested in the goods carried by the International Gas Appliance Co., Limited, and a visit to their show rooms will repay any one handling the goods. As their name implies, they are "International," and the best and latest things in gas lighting from the United States and Europe are to be found there, and it is necessary for dealers to be up-to-date in this as in any other line.

Canadian National Exhibition—Splendid Display of Telephone City Stoves.

Telephone City Stoves.

Amongst the magnificent display of stoves, ranges, furnaces, etc., in the Stove Building, the exhibit of heaters made by the Telephone City Stoves, Limited, Brantford, stands out for originality of design and practicability for heating purposes. The heaters are unlike all others shown and the exhibit of "Telephone City" top draft heaters for coal, wood and gas is, therefore, of special interest to the stove dealer who is on the lookout for progressive ideas.

The well known and successful "Telephone City" top draft, air-tight wood stoves call for brief notice, although their good qualities are known to hundreds of dealers. The merit of these consists in better material, heavier linings, removable tops, and a convenient and practical ventilating check damper and condenser. This line commands a ready sale and gives universal satisfaction.

The "Mohawk" series of air-tight wood stoves is a lower priced line of excellent value to meet the demand in some sections for a low priced stove.

The success of the "Telephone City" top draft coal heater, introduced last year, encouraged the company to enlarge the line and for this reason they can supply four sizes of single and one double heater in two series. The "Fifty" series have sheet iron tops with hinged covers, and the "Sixty" series have cast iron nickeled swing tops and base and are very handsome. The predominant feature of these coal heaters is the quick and economical production of heat, and its steady maintenance. They carry fire for fifteen to twenty hours and are easily managed and controlled. They are furnished with either a draw centre shaking or the Ransom duplex grates, and an excellent ventialting check damper goes with each coal heater.

A neat 24-page booklet distributed by the company describes and illustrates the product of the company better than can be done in a short article, and dealers unfamiliar with the "Telephone City" line will act wisely in sending for a copy. Not only are the stoves valuable for heating, but the top has an arrangement by which cooking can be easily done and sad irons can also be heated. Innumerable points of merit are mentioned in the booklet while recommendations from hardware merchants and others who use the heaters in their stores are also given. Mr. Yeigh, who was in charge of the exhibit, has received many orders from dealers who have been impressed with the heaters shown.

Gurney Foundry Exhibit.

The Gurney Foundry Co., Limited, of Toronto, must have been well repaid for the bright idea of arranging a model hotel kitchen. It was certainly up to date, and excited the admiration of all those interested in that line of goods. The kitchen was complete even to minor details such as wall furnishings. One of the special features of the kitchen was a John Bull steel plate heavy duty hotel range fitted with boiler, high shelf and canopy. Another special feature was a grill gas range with eight ovens and canopy. This is something new on the

Canadian market, and great credit is due the company for the production of this range, which was designed and built at the Toronto works. From the numerous enquiries being received by the company for this range, it is almost certain to come into general use for quick restaurant work. The carving table which was displayed in the model kitchen is another up-to-date production of the Gurney Foundry Co. The cast iron top of the table was partly enamelled and partly nickeled, which was to demonstrate that the firm make them either way. The bake oven, the Bain Marie cook table and the warming closet were also features of the kitchen exhibit well worthy of special attention. The kitchen exhibit was completed by a fine display of copper and aluminum pots, pans and urns. On the whole, this model kitchen display could only have been produced by a first-class firm.

In conjunction with the model kitchen was the stove exhibit in which was shown the famous Imperial Oxford range in numerous designs and the Oxford Chancellor steel range in every design, even to the yacht range, and in their new dress excited much admiration. The new steel gas range shown is certainly a beauty, and attracted considerable attention. A very prominent position in the exhibit was held by the Oxford Laurel double heater, both with and without oven. This is the very latest style, and from what Mr. Hancock, their northern representative, who was looking after the firm's interests at the Exhibition, said and also from the genial smile of the Toronto sales agents, it might be judged that sales in that line had been very gratifying.

From the general appearance of the furnace exhibit, three sizes of a line of eight being shown, it might well be supposed that the firm have had no small success in the furnace trade.

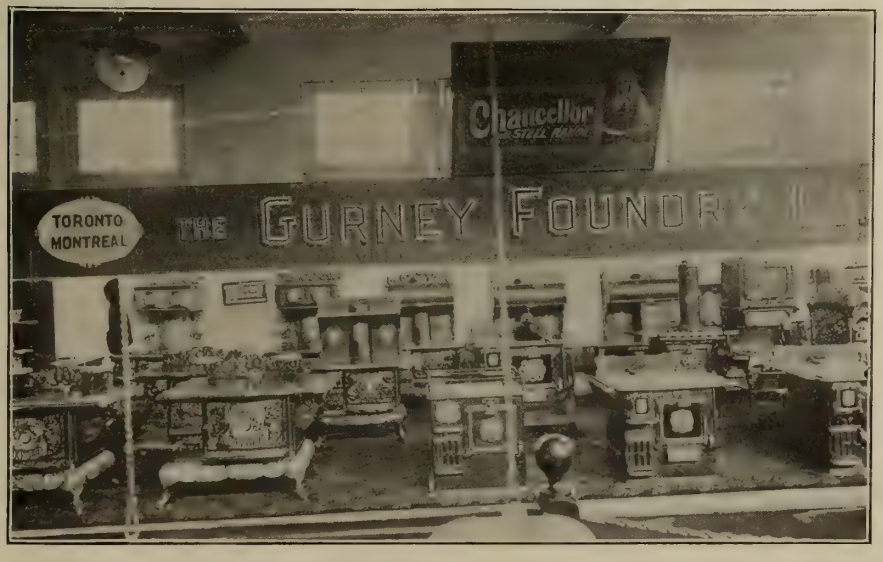
Canadian National Exhibition—A Corner of the Gurney Foundry Display.

forts of Mr. Hancock and those associated with him at the Exhibition will result in increased business for the firm. Dealers will also reap some of the good results of the work at the Exhibition, in that those who have been introduced to the products of the Gurney Foundry Co. at the Exhibition will be on a lookout for them when they go home.

Imperial Varnishes and Colors.

A pyramid of paints and varnishes in the exhibit of the Imperial Varnish and Color Company, Toronto, attracted attention to a remarkable extent. The display was in the Manufacturers' Building and was a splendid showing of the large variegated colors giving the whole an artistic effect, the beauty of which would have to be seen to be appreciated.

Steel Troughs.



A display of steel troughs exhibited in Implement Hall by the Steel Trough & Machine Company, Limited, Tweed, was inspected with interest by thousands of farmers and by dozens of hardwaremen who have become familiar with the firm's goods through their advertisement in Hardware and Metal. Merchants who did not visit the Exhibition and have not yet handled these lines should send for descriptive literature illustrating the hog troughs, storage tanks, feed boards, stable troughs and stock watering outfits, feed boxes, foot warmers, etc., manufactured at the works at Tweed.

Pease Furnaces.

Most artistic was the exhibit of the Pease Foundry Company in the Stove Building, our illustration showing enough of it to give a fair idea of the beauty of its arrangement. While the company had no space to spare, the exhibitors showed good taste in leaving plenty of floor space around their furnaces and heating apparatus. Too often exhibits are crowded owing to lack of space, but the Pease booth was a pleasing exception to this rule.

Two rows of goods were shown, the front row taking in several of the smaller sizes of "Economy" and "Economy Jr." boilers and water heaters, some very artistic radiators and on the end a massive wood furnace. Along the wall in the background about a dozen samples of "Economy" and "Florence" hot water and steam heaters and "Victor" furnaces were shown, as well as some "Colonial" and "Imperial" side wall registers.

Two furnaces which attracted considerable attention were the "Economy" combination for both hot water and steam, and the new style of "Economy" burning wood, hard or soft coal, a feature of the latter being that no gases

Canadian National Exhibition—Oxford Stoves and Ranges, Shown by the Gurney Foundry Company.

On the whole the exhibit was worthy of the large and enterprising Gurney Foundry Co. No doubt the energetic e-f line of goods manufactured by the company, comprising gums, varnishes, paints, dry colors, oils, white lead, etc.,

can gather around the doors. The "Victor" is a cheaper but very popular line.

This was the first occasion when the "Florence" and "Economy" heaters have been on exhibit at any Fair. The latter is made in twelve sizes for use in residences, and ranges from 275 to 2,700 feet of hot water radiation. It has many special features contained in no other boiler on the market. Its oscillating grate actually sifts its own ashes, while the grate can easily be turned on edge to have the fire-pot cleaned. Another important point is that the top surface of the grate can be got at with a poker. The fire-pot is unusually fitted with corrugated sides and dome. This construction gives double the direct fire surface of that of any previous one. Another feature is the centre nipple connection which permits a free flow of water through the heater without passing over surface exposed to air. There are also churches and other public buildings requiring ventilation. It is so constructed as to utilize the heat radiated from the combustion chamber, and the sides of the heater as well as through the smoke pipe, and warming the air used for ventilating. Radiators are placed in the various rooms desired to be heated. The company claim that this heater will heat and ventilate large school buildings with at least 40 per cent. less fuel than the same work has ever been done by any other kind of heater. The popularity of this new line is indicated by the fact that it has already been adopted for heating schools at Berlin, Guelph, Moose Jaw, Regina, Winnipeg and other important towns and cities this year.

Another branch that the Pease Foundry Co. has recently gone into is that of manufacturing registers, they making a large variety in all different styles of finish. Carloads are being shipped to all parts of the Dominion and this branch of the business bids fair to become very important. In order to take up this line the company have built a new plant containing 37,000 square feet of floor space, five acres being acquired on Shaw street, near the C.P.R. tracks in the northwestern part of Toronto. It is also the company's intention to build a modern up-to-date foundry on this site this fall. For the present the Mimico plant will be continued but by next year the new plant on Shaw street will be constructed, and they will be made large enough to accommodate all of the manufacturing branches of the company. The Mimico plant will then be disposed of. This advanced move on the part of the company allows them to "put all their eggs in one basket" and will greatly systematize their work and allow of greatly enlarged productions the facilities for manufacturing being several times greater than at present.

The company are exhibiting their new line of "Colonial" and "Imperial" Sidewall Registers, the new device showing provision for heating from two to six rooms through the trunk system from one pipe off the furnace. This system can often be ased to save heating room in the cellar, and for using half the number of pipes. It is obvious that it will reduce the amount of heat wasted in the furnace room; a large volume of air moving through the pipes provides for this, and it is not liable to be influenced by prevailing winds and other points which sometimes interfere with the working of warm air furnaces. These registers are very economical for small houses, and an additional advantage is that with a sidewall register floor space is saved and the cutting of carpets, etc., is avoided.

Canadian National Exhibition—Artistic Display of Furnaces and Heating Apparatus, Manufactured by the Pease Foundry Company.

many other important details in the "Economy" which are worthy of consideration.

The "Florence" boiler is the first made in Canada for both hot water and steam and is also the first individual heater. It ranges from 600 to 1,200 square feet of radiation and weighs from 17,000 to 18,300 pounds. The company consider the prospects exceptionally bright for the "Florence" leading all others for fine points and for fine residences and other large buildings of all kinds where ventilating is not required.

The Pease Foundry Co. also manufacture the "Economy" Steam Heater and Ventilator, which is too large to be shown in such an exhibit as can be made at the Exhibition. The heater weighs from 8,000 to 12,000 pounds. It is the latest invention of the company, and is intended for use in schools,

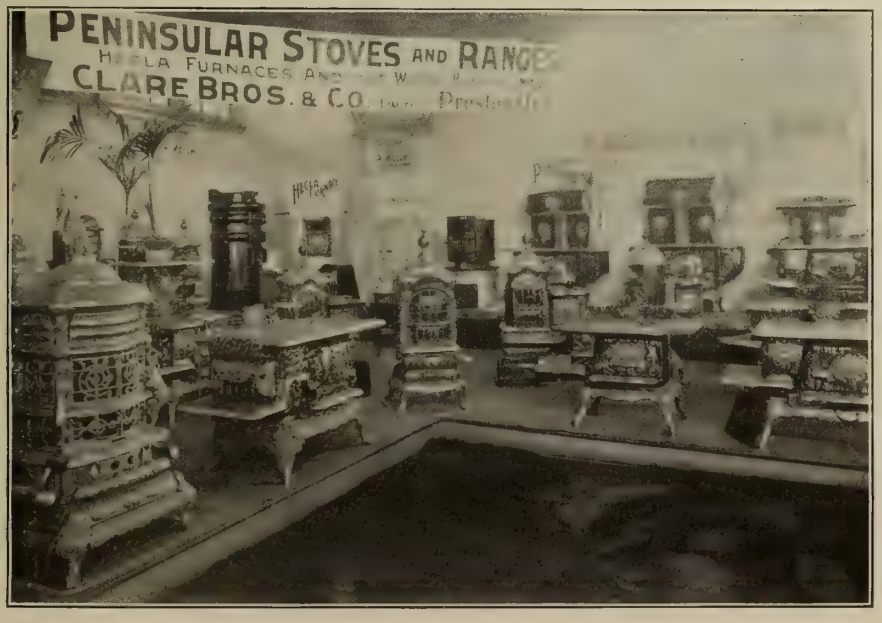
Many other lines manufactured by the company were not shown in the exhibit. Some of them, however, were illustrated in pictures or cuts, and described at length in some very interesting booklets by the company, prepared for distribution. Copies of these books can be secured by addressing the company at its office on Queen street east, Toronto.

Metallic Roofing.

An interesting exhibit in the Manufacturers' and Liberal Arts Building was that of the Metallic Roofing Company, Toronto, their entire exhibit being made in their own factory. Much of the material used was embossed steel, while metallic ceilings and walls and ornamental designs of fixtures were also shown.

Standard Silver Co.'s Exhibit.

Very handsome indeed was the exhibit of the Standard Silver Co., Limited, Toronto, and very complimentary were the remarks passed on its appearance. Without doubt these were fully warranted, not only because of the arrangement of the exhibit, but also because of the quality of the goods exhibited. As can be seen from the accompanying illustration, the exhibit consisted of a room neatly finished in white and gold on the outside, which colors gave the neat and attractive appearance to the exhibit. Surmounting the room was a standard bearing the name of the company, the gold letters standing out from the blue background with a brilliant effect. The room was provided with show windows on both sides, the entrance being at the corner, in which was exhibited the standard goods of the company. These goods included tea sets, coffee sets, waiters of all kinds, tilting sets, ice pitchers, berry dishes, fruit dishes, salad bowls and servers, cake plates and baskets, baking dishes, soup tureens, butter dishes, biscuit jars, pickle casters, breakfast trays, celery jars, card receivers, bon-bon dishes, cups, prize trophies, cups, etc., combination sugar bowl and spoon holders, spoon trays and holders, syrup jugs, egg sets, dessert sets, chocolate pots, fern pots, smoking sets, hotelware, toast racks, and other goods. Two special features of this display of goods were a lacrosse trophy and a 20-inch tray. These were finished in copper and pewter, and presented a unique as well as an attractive appearance.



The room itself was neatly furnished, and served as a reception room where the company received their customers and customers' friends. In there was displayed a handsome silverware cabinet of polished oak, with brass trimmings, being the Oriental type of cabinet. It contained a tea set, waiter and flatware, significant of the high quality and well guaranteed goods made by the Standard Silver Co.

Canadian National Exhibition—Handsome Display of Silverware.

It is difficult from appearance to tell whether silverware is of good wearing quality or not, and in order to assure their customers and their customers' customers of the high quality of their goods, the company have a special guarantee worded as follows: "The purpose of a manufacturer's guarantee is to assure both dealer and customer that the goods will wear satisfactorily. Every piece of hollow ware bearing our trade mark is guaranteed by us to be of the very best quality, and warranted to wear satisfactorily. This guarantee is a signed and sealed document, which we print for every dealer and send, neatly framed, upon request."

In order to help their dealers in the advertising of Standard silver goods the company are in the habit of supplying to them small booklets, on which is printed the dealer's name, and which contains illustrations of some of the most useful silverware, and also a copy of the guarantee. These the dealers can distribute throughout their respective districts. This, without doubt, is a valuable assistance to the dealer in his silverware trade.

Canadian National Exhibition—Display of Clare Bros. & Co., Preston.

Hecla Warm-Air Furnace.

Clare Bros. Company, Limited, Preston and Winnipeg, had a splendid showing of Hecla furnaces and Peninsular stoves and ranges in the south-eastern corner of the Stove Building. The arrangement of the exhibit was very attractive and thousands stopped to inspect the goods on exhibition. The illustration shows the display of stoves, steel ranges, heaters, wall registers, etc., on the floor, and the ranges, furnaces, boilers, base burners, oaks, etc., on the elevation in the rear, but to appreciate the exhibit it had to be seen.

The Hecla is a Canadian furnace, made from a Canadian design, by Canadian workmen, for a Canadian climate. It is of the most careful construction, and its design insures in a marked degree those essentials of a successful furnace, durability, power, economy, and easy management. It differs from others in having a fuse joint which prevents gas

leaks, while the cast dome prevents burning out.

Peninsular ranges and stoves are so well known that it is unnecessary to elaborate at length upon their good features. However, improvements are made from year to year. The manufacturers are ever willing to adopt new ideas and this insures the securing by the public of the very latest in stoves when they buy a Peninsular.

The sheet steel oven radiates heat quickly and saves fuel and time. The ovens are also ventilated, thereby preventing soggy baking and keeping the oven pure. Grates can be removed without disturbing fire linings or water front.

Peninsular ranges are constructed with a view to getting the best results with the least consumption of fuel. In order to reach this end, much thought and money has been spent in experimenting to get the area of the flues the proper size to assist combustion and carry an even heat to all parts of the oven.

Clare Bros. & Company invite correspondence from dealers who have not studied the quality of their goods. Booklets illustrating the various lines made by them will be supplied on request.

The Walker Steel Range.

A very busy space in the Stove Building was that occupied by the Walker Steel Range Co., Limited, of Grimsby, Ont., who are manufacturers of "The Walker Line of Ranges and Heaters," including the well-known "Walker Pilot Steel Ranges."

All of their goods are the very latest production of the patternmaker's art, the Walker Pilot especially being noted for its many excellent and exclusive features.

Many pleased users of their ranges were among those who called, and the trade not only verified this fact, but spoke strongly in favor of the company's sales system, guaranteeing, as it does, proper profits.

All of their goods are unconditionally guaranteed, and this fact, combined with the excellence of the goods and assurance of proper profits, combines to make the agency for this line a valuable one. The company still have some unoccupied territory, and good dealers will be given the agency in those districts. An exhibit will also be made at London Fair.

Canada Metal.

The usual enterprising spirit was shown by the Canada Metal Co. in their exhibit in the Machinery Hall. The exhibit consisted of metals of all kinds, together with some manufactured goods. Of metals in ingots they had a fine display of aluminum, copper, tin and pig lead. Babbit metal of course formed a very prominent part of the exhibit, and the company no doubt are ready to demonstrate the high quality of their metal for bearings. An interesting feature of the exhibit was the display of piping, including phosphor-tin pipe, lead pipe and lock tin pipe. Of interest to electricians and wire-men was the complete display of fuse wire. Among the kinds of solder shown was wire solder for canners' use. Perhaps the most attractive part of the exhibit to those not directly interested in metals in general and also to printers was the display of type metal, including as it did several semi-circular forms for newspaper presses. The company pays special attention to this line of metals, and now have very numerous customers.

The growth of the business of this firm is shown by the extension of their plant during the past year, and from the progressive spirit ever shown by the firm, it might well be supposed that their business will continue to expand as it has done in the past.

The Bowser Oil Tank.

Few exhibits at the Exhibition were of greater general interest than that of the Bowser system of oil storage, better known as the Bowser oil tank. Situated at the extreme easterly end of Machinery Hall, the exhibitors were allowed a remarkably small space and were compelled to leave out one of the best features of their exhibit after having specially prepared for the display.

The showing was, however, a remarkably good one and hardware merchants, grocers, manufacturers and heads of large industrial plants were found at all times at the booth securing information regarding the Bowser system, and studying the working of the perfect self-measuring and perfection syphon.

S. F. Bowser & Company, the patentees of the system, manufacture at 530 West Front street, Toronto, and Fort Wayne, Indiana, pumps and tanks for the storage and handling of oils of all grades, delivery being made direct to the customers' cans in retail stores, direct to autos or launches, direct to the oilers used around mills or factories, and to the mixers in paint works. The system offers economy in oil and in labor with perfect safety and cleanliness as well as checking purchases and sales. Possibly the most important outfit is one for handling gasoline or benzine con-

Canadian National Exhibition—Walker Steel Range Company's Display.

sisting of a tank of heavy galvanized sheet steel placed outside the building, either buried in the ground or in a shed and attached to a powerful pump inside the building capable of delivering an exact gallon, half gallon, quart or pint of oil from such outside tank a distance of 250 feet direct or up to any reasonable elevation.

This outfit (cut 41 in catalogue) is entirely evaporation proof and complies with the most rigid demands of the insurance companies in Canada and the United States. In a recent fire in a garage at Providence, R.I., the gasoline caused no danger whatever and the pump worked perfectly after the fire was extinguished. The firm's representative, Mr. J. B. Bates, reports a growing demand for this style and where they have been used no single instance so far exists of disappointment or of danger. Furniture factories are using them for benzine with pump on fifth floor of building.

A similar outfit (cut 15) for handling linseed, turpentine, or other non-lubricating oils, with tank in basement of building and pump on first or higher floors, has the advantage of taking up but little floor space and handles linseed without gumming and turpentine without evaporation.

A new style of tank and pumps has recently been put on the market for use in lumber mills, power plants, lithographers, cotton and linen mills or any place where "oilers" are in need of filling. This outfit (cut 51) delivers 1 quart, 1 pint and ½-pint at a stroke and can be placed in the engine room or other position securing economy in distribution, economy in labor and safety in storage. Many of the leading firms in Toronto, Montreal and other cities are placing second or third orders for this style.

The machines for measuring coal oil, either from tank on floor of store (cut 19) or in cellar (cut 1), offer accuracy, cleanliness, safety, speed and delivery and it is established that at least 2 per cent. more oil can be sold from a Bowser outfit than in any other way, a better quality of oil being furnished as well.

Many of the railway store departments are using the long distance systems of this firm, as many as 25 different classes of oils being handled in a separate oil house basement with pumps conveying the oil to other floors or transferring it through underground pipes to other parts of the plant. A very large order for this style was lately shipped to Scotland and men from Fort Wayne, Ind., went over to install it.

As showing the increasing popularity of the Bowser system, Mr. J. B. Bates reports that at our Exhibition he received calls and enquiries for goods from Siam, Indo-China, British Guiana, Switzerland and London, Eng. Visitors from New York, Chicago and other cities in the States also expressed their entire satisfaction with outfits which some of them had used upwards of 10 years and handed in addresses of others who are desirous of buying.

Canadian National Exhibition--The Bowser System of Oil Storage.

The manufacture of these goods in Toronto is managed by Mr. H. Rodgers, and to him and Mr. O. Cooley, one of his assistants, is largely due the handsome decoration of the exhibit in Machinery Hall. The Canadian business is solicited in the Northwest by Mr. T. Cragg, Mr. N. Rosconi in Quebec and two travellers in the Maritime Provinces. Headquarters of the firm are at Fort Wayne, Ind., where a large plant is operated. The display made is most creditable but would have been far more comprehensive had more space been available.

Capewell Horse Nails.

The Capewell Horse Nail Co., Toronto, whose interesting and attractive exhibit in the Main Building is pictured on this page, is a recent addition to the already large list of Toronto manufacturers. Their plant, at 48 to 56 Duke street, is completely modern and up-to-date, and the product of the factory is already favorably known in all parts of the world.

The exhibit at the Fair arrested the attention of every lover of horse flesh, the neat arrangement of the horse nails and the display of handsome horseshoes being such as to attract all passers-by. A neat souvenir in the form of a finger ring, made of a horse nail, was presented to visitors. Capewell nails were exceedingly popular, and are being called the "fit-well," not only because of the neat fit of the souvenir ring, but also because of their strength and ease on the horse's foot.

Capewell nails are "Made in Canada," they are the best driving nails, the best nails to hold, the safest to use, and the most perfect in form and finish. These claims made for them are being substantiated by actual use.

Capewell nails never split in driving. They never crimp in the hardest hoof. They are flexible to clinch, and the clinch holds against any strain in service. Their perfect points make a clean cut hole in the most brittle hoof. They are absolutely uniform in length, breadth and thickness.

They are made from the best Swedish iron rods, specially imported, the quality of which is improved in compactness, tenacity, and uniformity of temper, by the Capewell process, controlled exclusively by this company.

As demonstrated by actual mechanical tests, the company's literature states that the tensil strength of the Capewell is one-half greater than that of any other nail made. Thus it is that Capewell nails never break under the heads, but hold the shoe until it is worn out. There will be no loose shoes to tighten for nothing.

The accompanying testimonials have been selected from hundreds of equal merit, simply to indicate to any strangers to Capewell nails, in Canada or other lands, the opinion of smiths who use their nails in different classes of work and in various parts of the world.

At the present time Capewell nails are exported to nearly all countries for use in armies and other exacting service. In

Canadian National Exhibition—View of Capewell Horse Nail Company's Exhibit.

the hot and dry parts of the country, and in the heaviest work, it is acknowledged that the Capewell is the nail which gives at all times the best satisfaction.

All Capewell Horse Nails, from Nos. 5 to 12, are packed in five-pound paper boxes, five of these boxes being contained in a wooden box of 25 pounds. The small sizes, 3, 4 and 4½, are packed in one-pound paper boxes, 25 to a wooden box. Both Regular and City heads are supplied in all sizes, the Regular being larger than the City heads. The company is confident that its nails are what it claims for them—"The best in the world."

Samples and catalogue free on application.

Brantford Cordage Exhibit.

"Maple Leaf" brands of binder twine were shown in the Implement Building, and attracted a lot of attention amongst farmers and hardware merchants. The central feature of the display was a pyramid of twine, another being the strong sack shown in the photo, the sack being prepared ready for shimpent. Some Manila hemp from which the twine is made, was also shown.

The four "Maple Leaf" brands are sold by hardware dealers in all parts of the country, the Cordage Company having had to install much new and up-to-date machinery in order to meet the growing demand for their twine. The company meet the association prices, and claim to make the best quality produced in Canada, their output being very large.

Four lengths of "Maple Leaf" twine are made—500, 550, 600 and 650 feet to the pound—these being designed to meet all the varied conditions affecting the use of binder twine. They are adapted for binders of all makes and conditions, if properly adjusted, in all kinds of grain.

In the manufacture of these brands every detail is carefully guarded. The fibre used is the longest, strongest and cleanest obtainable. There is complete system and close attention in every department, and with every process of the preparing, blending, spinning and balling. A careful examination and comparison reveals the fact that "Maple Leaf" brands are even, clean, free from tow bunches and fine spots, and are also long and strong.

These are the characteristics which mean so much to the twine user in the busy harvest time. With "Maple Leaf" twines there is no clogging of the tensions, no tangling and breaking, no time wasted in re-threading the needle, no scattering of grain in unbound sheaves, no loss of time, money and patience.

Canadian National Exhibition—Brantford Cordage Co's Exhibit of Maple Leaf Binder Twine.

Canadian National Exhibition—Owen Sound Wire Fence Company's Display.

Owen Sound Wire Fencing.

Occupying a prominent position among the wire fencing displays on the lawn near the lake front, the Owen Sound Wire Fence Company, Limited, had a well-arranged showing of wire fencing and metal gates, the important feature of the Owen Sound fence being that nothing but the best high carbon steel spring wire is used in the strands, and the Dillon Hinge-Stay which overcomes the principal objection that has ever been raised against wire fencing, viz., the bending of the stays or uprights when weighted down. Farmers who have tried or examined the hinge-stay principle give it their hearty endorsation. Mr. Goldsmith, the companionable representative of the company, also emphasizes the superior quality of wire used, the company making a fence of No. 9 wire throughout.

In the exhibit steel gates occupied a prominent position, a bridge being erected of them and one being also set up in working order, it being inspected by thousands of farmers during the Fair weeks. Gates are made in various sizes, from 3 to 14 feet in length.

High carbon hard steel wire is used in all the strands while No. 9 medium tempered wire is used for stavs. The manufacturers guarantee this wire to stand a pressure of 2,300 pounds and over, this being more than sufficient for any use which fencing may be put to on the farm. People climbing aver the fence do not bend it out of shape, the wire used in the strands being of coiled spring. This keeps the fence tight at all times and a weight on the fence merely causes it to lay to one side on its hinges, springing back into shape as soon as the weight is removed. The same features render the fence impervious to extreme heat or cold, this overcoming the objection to wire fencing owing to the action of frost upon it.

The Dillon Hinge-Stay Fence is not a cheap article. The aim has been to make it perfect in every detail, its quality making it cheaper than inferior fences in the long run. Various styles are manufactured, one being made particularly for the prairie land of the west.

While lower in price it combines durability and safety, being designed to replace barb wire at small cost. The company makes a specialty of pushing business through hardware merchants and they report a marked increase in business, the demand being ever on the increase. Illustrated printed matter will be sent on request.

The E. W. Gillett Co., Limited.

The exhibit of E. W. Gillett Co., Limited, in the Manufacturers' Building, was acknowledged by visitors to be one of the richest, most artistic, and attractive of the entire Exhibition. To the general hardware trade this immortal Don Quixote says, "All comparisons are odious." How far the truth of this saying may be applied to the various exhibits at the Exhibition visitors are able to judge for themselves. Certain it is that the display of E. W. Gillett Co., Limited, this year admitted of no comparison, and while in a general line similar to that of last season, some attractive advertising features were added that did not fail to arrest the attention of visitors. The large electrical cabinet in the centre told of the virtues and qualities of Magic Baking Powder, Imperial Baking Powder, Gillett's Lye, Gillett's Cream Tartar, etc. Two smaller revolving electrical devices displayed on two sides of the exhibit pertinent ads. of the firm's products. E. W. Gillett Co., Limited, have a reputation of making only one grade of goods, and that "the best," and the enormous increase in sales from Newfoundland to Dawson City shows that the public and trade do appreciate the Gillett Co.'s efforts to supply them with thoroughly reliable and absolutely pure goods.

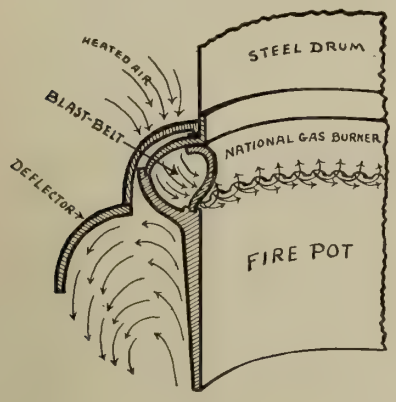
Canadian National Exhibition—Exhibit of E. W. Gillett Co., Limited.

company's famous Gillett's Lye is a familiar and popular article. The manner in which Gillett's Lye is growing in favor indicates that the public are learning of the hundreds of ways in which this useful article may be used. The hardware merchant, more than any other, is in a position to bring the qualities and uses of Gillett's Lye to his customer's attention, and, aided by the extensive, continued and educative advertising the company is doing, the trade's interest should lie in encouraging the sale of Gillett's Lye more and more.

In the main aisle, near the eastern door, was the exhibit of E. W. Gillett Co., Limited, Toronto. Cervantes in his

Moffatt's National Stoves.

National Stoves and Ranges manufactured by the Moffatt Stove Company, Weston, constituted a most creditable and conspicuous exhibit at the entrance of the Stove Building. The order of the display was especially attractive, a row of steel and cast iron ranges occupying an elevated position in the background, in the front being a line of cast iron ranges and in the intervening space an assortment of different styles of heating stoves, base burners, oak heaters and air tights. All were well polished and nickeled and the whole gave an effect which excited attention, while the variety was convincing.



The Canada National Steel Range is a special line which interests the housewife. The ovens are thoroughly ventilated. Fresh air passes through the oven continually in proper quantities, so that quick baking and perfect operation are not interfered with.

The Classic National Range is another popular line, being one of the handsomest in America. The grate system permits the removal of the bars at any time they become worn out, without disturbing the waterfront or fire box linings. There are no complicated mechanical features to get out of order. The big square ovens of the Classic National, one inch larger than other ovens, are ventilated with a steady stream of pure heated air.

Mr. Moffatt states that a very large trade is being done in the west, steel ranges and the Alberta Hot Blast with

duplex grates being the principal stoves in demand.

Housewives who have had trouble in the past with thermometers in oven doors will find this difficulty overcome in the Moffatt ranges. The inside of each oven door is lined with a pressed tin reflector which centralizes the air upon the thermometer, there being an opening behind the instrument while at all other points it is closely attached to the

No. 1

door. In addition to this the company has made a contract with a leading American firm to make a special thermometer which the Moffatt Company guarantees to indicate the exact temperature when properly placed on the door.

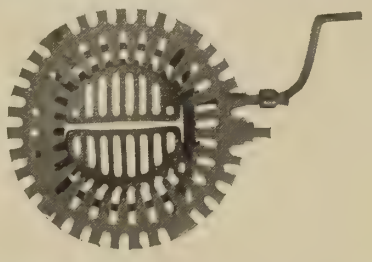
Another feature worthy of note is the new nickle guard rail which is attached to the top of the range, a circulation of cold air keeping it from becoming tarnished. The fact that the Moffatt Company confines its business entirely to stoves and ranges, not manufacturing furnaces, hotel goods or other side lines, should be a strong recommendation for their goods. Mr. Moffatt states that no other Canadian company specializes upon such exclusive lines as does his firm.

A splendid catalogue (No. 2) has just been issued by the company and will be sent any dealer who desires a copy.

One of the company's leaders for this season is the "National Oak Heater," the "king of all oak stoves." When made with double heater the cold air is taken from the floor. Magazines can be fitted in each size for hard coal. The front nickle reflector and nickle wings are finished in their new process brilliant nickle.

Cut No. 1 shows the double hot blast system. Air is taken through screw draft and passes around the superheating chamber, entering fire-pot through slots, consuming all the gases, and also checking the fire when necessary. The mica door is protected with a wire gauze which prevents the mica from smoking when burning soft coal. Bottom and top of steel drum are flanged and fastened air and gas tight to rings. Cut No. 2 shows the duplex grate with annular shaking ring. This is separate and inhependent, and can be withdrawn without removing a single plate or bolt.

Dealers desiring exclusive territory should write the company for particulars.



Canadian National Exhibition—Display of Moffat's National Ranges.

Cnnadian National Exhibition—Moffat's Display at Entrance to Stove Building.

The Borden Co.

A display that attracted much attention at the Toronto Exhibition was the well arranged exhibit of the Borden Company, manufacturers of hand and power pipe-threading machinery, hand stocks and bolt stocks, 16 Sheppard street, Toronto. Their popular solid adjustable dies as applied to these hand stocks and hand and power machines is

No. 2

a distinctive feature and demonstrates itself in being simple, more practical and easier running, such as is well suited to meet the requirements of the trade. All the dies are constructed with inserted segments of high grade steel, which can be replaced, when worn out, at a small cost. The hand machines are constructed entirely of malleable iron and each one carries with it an unconditional guarantee. The Borden Company, to show the confidence they have in their hand machines, are willing to loan to any one sufficiently interested one of these machines on ten days' free trial. Another feature in connectian with these machines is their saving in time, which alone is a very important consideration to anyone having occasion to use threading machinery.

* * *

The important place which gasoline is filling was clearly demonstrated in the Process Building. Engines of a variety of sizes and styles were there in evidence and commanded not only attention but interest of a practical kind

* * *

The show of cattle was one of unsurpassed interest. Many of the beasts shown, we venture to say, could not be surpassed anywhere.

Home Treasure Ranges.

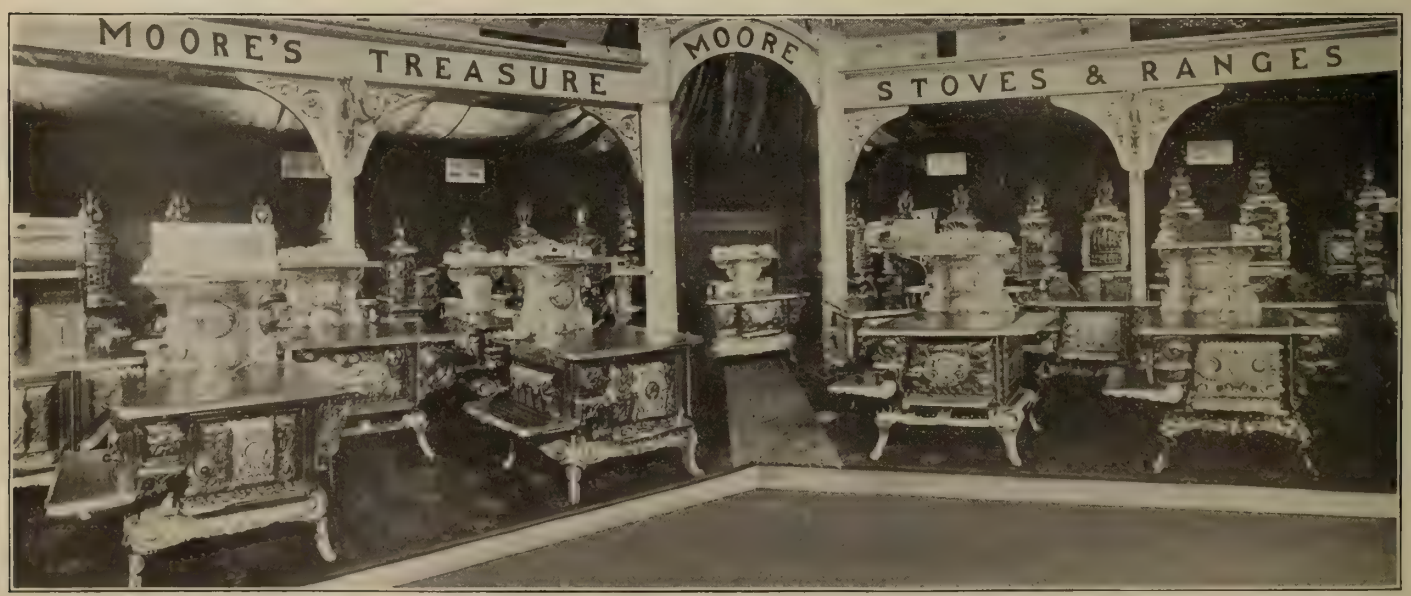
One of the prettiest exhibits in the stove building was that of the D. Moore Co., stove founders, Hamilton, makers of the popular "Home Treasure" range and the "Happy Home" line. Their steel range, the "Premier Treasure," is a beauty in style and construction, and its merit is winning for it an exceptionally large sale both in the east and in the western Provinces.

The exhibit occupied the northeasterly corner of the stove building, and a great deal of work has been put upon the decoration of the background and arrangement of the stoves. No less than 90 stoves and ranges were shown, and had more space been available an even better showing would have been made.

The Moore Co. are also manufacturers and importers of tinners' general supplies, and have agencies at Winnipeg and Vancouver. Their foundry was established in 1828, and the firm was one of the pioneer stove concerns in Canada. The exhibit was in charge of Mr. J. W. Parish, who has been kept busy handing out beautiful pin trays to thousands of ladies who have visited the exhibit, admired the artistic display and inspected the good features of the stoves and ranges shown. In addition to the lines named a splendid assortment of "Art Treasure" and "Empire Treasure" base burners, and "Oak Treasure" stoves were displayed, the company being very proud of their base burners and oaks, they having several other styles of the former which were not on exhibition owing to lack of space.

Permanent woodwork has been erected, the pillars and framework being attractively ornamented with bronze figures and electric lights, while above and behind there is a background of bunting. The color scheme is quite striking, and the corner should make a nice home for the Moore Co. in future years.

The Canadian Fairbanks Co., Limited.



The Canadian Fairbanks Co.'s exhibit in Machinery Hall is one which attracts a great deal of attention. It is splendidly arranged, and is representative of their leading lines. Their display of Fairbanks Standard Scales is indeed a credit to them, scales of all sizes and for all purposes being tastefully arranged. Viewing it one cannot but feel that they have justly earned the world-wide reputation which they enjoy.

Canadian National Exhibition—View Showing Some Fairbanks Scales.

As already mentioned in our previous editions of Canadian Machinery, the Canadian Fairbanks Co., Limited, are now the exclusive Canadian selling agents for Fairbanks, Morse & Co.'s lines of gas and gasoline engines, steam pumps, windmills, hand push and motor cars, etc. They are now building a Canadian factory to be located in Toronto, where all these lines will be manufactured. The exhibit of gas and gasoline engines is a creditable one. Their farm engine, known as "Jack of all Trades," was one which attracted considerable attention, being in constant operation and seemingly perfect in every detail. This is an engine of 2-horse-power, being specially designed for farm use. It will pump water, saw wood, shell corn, run cream separators, etc. Their line of vertical and horizontal engines showed up exceedingly well, all running constantly.

They also displayed a complete line of Fairbanks' asbestos and bronze seated globe and angle valves, both brass and iron ; Pratt & Cady renewable seat ring gate valve and check valves ; the genuine Pratt & Cady asbestos packed steam cocks ; Dart's patent bronze ground joint unions ; Yale & Towne's chain hoists, as well as a Taylor & McKenzie hand punch that was worthy of more than passing attention.

Canadian National Exhibition—D. Moore & Company's Exhibit.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 82.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 15, 1905.

COLD weather is needed to stimulate trade, which, however, is going along evenly at the present time. A cold spell, however, would induce people to buy in much greater volume.

Montreal wholesalers state that the commercial travelers' tax still has the effect of keeping American salesmen away, and is seriously handicapping the local jobbing interests.

The best sellers at present are skates and snowshoes, which are being booked in good volume. Ammunition still keeps its position at the head of the list, and sales are really tremendous.

Cast iron hollow-ware has been advanced during the week, the present discount being 32½ per cent. only. Wrought brass butts are also on the upward move, the current price being 12½ per cent. advance on list.

Prices on lanterns have been withdrawn by one of the largest manufacturers, and a return to a profitable schedule will be made. This will not seriously affect any of the local interests, however, as stocks are said to be large enough to demoralize the lantern trade for some time.

Axes—A good healthy movement is seen. We quote the following prices: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Conditions remain the same as at last report. Prices are: Axe handles No. 3, $1.35; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Business is looking up as the busy season approaches. Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—The trade is said to be stocked up for any emergency. Prices have been withdrawn by one of the largest firms manufacturing lanterns, but we are still authorized to quote: Cold Blast, $4.50; No. 0 Safety, $5.50.

Rivets and Burrs—Normal conditions prevail. We quote as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—There is no falling off to be noted in the trade. Our prices are: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—The usual demand is apparent. Our quotations are: 3-8 and smaller, 60 to 10; 7-16 and larger, 55 to 5.

Wire Nails—Sales are satisfactory, a steady tone being maintained. We quote: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—Fair quantities are being shipped. We give prices: $2.20 per keg f.o.b. Montreal.

Horseshoes—Blacksmiths and dealers in blacksmiths' supplies are placing large orders at the following quotations: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and large, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods — Ammunition and rifles are still the features. This has been a great season for ammunition so far. Our prices are as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—There is naturally a better movement as the Fall advances. The period just preceding the close of navigation is always one of activity. Prices are still the same.

Cordage—No change has occurred in prices. The trade is satisfactory.

Cement and Firebrick—The quietness reported last week still continues, and there is little activity manifested at the present time. We quote: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35.

Coil Chain—The demand is improving, good orders being received from all parts of the country. Our quotations: 5-16 inch, $4; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—The fruit season is creating a very brisk demand. Our quotations are as follows. Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—Nearly every order just now includes skates, and they are being shipped in all directions to wideawake retailers. We quote: 25c to $2.50, according to quality.

Sleigh Bells—From now until Winter there will be an active sale of these goods. We quote as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—Our quotations are unchanged, as follows: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—Although the season is very early, numerous inquiries are being received. Prices are from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Sept. 15, 1905.

IN general the hardware market is feeling the reaction of the two Exhibition weeks, and although business is fair there is not the activity that marked the two Exhibition weeks. All the travelers are now on the road again, and orders are now coming in through them.

Sporting goods are a prominent feature on the market at present, and the demand for shot guns and ammunition is increasing every week. Rifles, too, are beginning to come forward. Washing machines have an excellent demand, and step ladders, too, are moving quickly. There is an excellent demand for building materials of all kinds, including paper, wire nails, cement and fire brick. Rivets and burrs, bolts and nuts, and screws, also, have an excellent demand. Prices continue unchanged.

Sporting Goods—Shot guns and ammunition have an ever-increasing demand at present, and rifles are beginning to be a feature. There has been no advance in shot, as was expected last week.

Washing Machines — An increasing demand is reported.

Chain—Fall trade is beginning to pick up. We quote as folows: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders— The opening of Fall has brought an increased

trade. We quote: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Business is quiet this week at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demand for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—The market is quiet this week.

Wire Nails—Trade is very large, but stocks are ample for all demands. Prices are the same.

Cut Nails—There is a very satisfactory trade being done. Quotations are: $2.40 per keg f.o.b. Toronto.

Horseshoes—Good business is being done and a large Fall trade is looked for. Our quotations are: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Axes—It is a little too early to expect much business, but trade is good.

Cutlery—Trade is increasing and case goods particularly are in demand.

Skates and Sleigh Bells—Large orders are booked for future shipment, an increased trade being indicated by the orders in hand.

Horse Nails—Trade is active at unchanged prices.

Screws—Demand is strong and some mills are talking of increasing their plants. Prices are firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—There is an excellent trade being done.

Cordage—Sorting orders are coming in. Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Our quotations continue as follows: Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—There is no change in the market this week. Business is very good. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse, Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Demand is strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 20c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—A good business has been done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool—The market in these goods continues to be unsatisfactory. Prices have still further stiffened, although not showing perceptible advance in quotations. Arrivals are coming in somewhat slowly, and demand keeps well to the front. The present state of this market is attributable to what is considered an unhealthy competition between rival buyers, and by no means warranted by the true conditions. We quote:

Hides, inspected, No. 1 per lb.		0 12
" " " 2 "		0 11
Country hides, flat, per lb.	0 10½	0 11
Calf skins, No. 1, selected		0 14
" " No. 2		0 12
Lamb skins and pelts, best city slaughter		0 85
Rendered tallow, per lb.	0 04	0 04½
Unwashed wool, per lb.	0 16½	0 17
Wool-washed fleece	0 26	0 27
Rejections	0 20	0 22
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 15, 1905.

As foreshadowed in our last report, the tin market has succumbed to persistent bearing on the metal exchange, and the price dropped during the week. At time of writing it has stiffened again to almost its old figure, but fluctuations are so frequent and sudden that no safe prediction can be made for the immediate future. In the United States the price is as strong as ever, and as the visible supply all over the world is very short, there is no doubt but what tin will again advance as soon as the bears have been driven from their attack on the corners. On the whole, the present year has been an extremely good one for tin dealers.

Lead also weakened very perceptibly as a result of the peace declaration, but firmed up again, and is now quoted but little below last week's price.

Welcome news to dealers will be the fact that local jobbers have been offered antimony at a price £2 under the previous quotation, but this is still too high to induce buying. It only serves to show the tendency of the market, and a return to normal conditions is hoped for.

The advance of copper has been stopped, though the market is as yet too strong to forecast lower prices.

Trading in pig iron has been quite satisfactory. Though no large orders have been placed, a few lots of one and two hundred tons have been sold, thus helping to keep up the prices.

Canada Plates — There is nothing new to chronicle this week. Prices are: 52's, $2.35; 60's, $2.40; 75's, $2.45; full polished, $3.60; galvanized 52's, $3.75, $3.85; 60's, $4, $4.10.

Copper—No further advance has taken place this week. The prices given are very firm, however, and the output of the mines is all well contracted for. We quote: Ingot copper, 17½c.; sheet copper, 24¾c.

Ingot Tin—A decided weakness developed in the early part of the week, but a slight recovery brought the prices back somewhat. The existing weakness is attributed to better arrivals, and the tightness of money. Our prices are: 36c. to 36½c. per lb.

Pig Lead—Slightly easier conditions exist this week, the current prices being firm at $3.70 to $3.80 per 100 lbs.

Boiler Tubes—Business continues exceptionally good. Prices still remain firm.

Pig Iron—The demand is normal and there are no indications of excitement. The prices given below are for import orders, and shipments direct from the blast furnaces. Orders from stock will not be accepted at these figures. We quote:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18.00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16.50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.50	"	"
" (special)	18.50	"	"
Ayresome No. 1	18.50	"	"
" No. 3	17.75	"	"
Summerlee	18.50 to 19.00	delivered	Montreal.
Clarence No. 1	17.75	"	"
" No. 3	17.25	"	"
No. 1, Cleveland	17.50	"	"

Tool Steel — We still quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—The trade remains in a satisfactory condition. We give the following prices: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting— We quote prices: Cold rolled shafting, 3-4 ing quoted: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—The market is very strong, and importers are now paying from 5 to 10s. a ton more than last week, with prospects of a further advance. Prices to jobbers have been advanced in accordance therewith. Makers decline to take orders for delivery far ahead, showing the strong feeling for a further advance. We quote to consumer: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 and 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15;; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c. extra.

Black Sheets—Strength is the characteristic feature of the market. We quote: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—Jobbers are now getting better prices from the producers, but the price is still considered too high, and we are as yet quoting 16c.

Tin Plates—Have not felt the weak-

LAFARGE (non-staining) CEMENT

for setting, pointing and backing Limestone, Granite or Marble where freedom from discoloration is desired. Send for descriptive catalogue.

Drain Pipes, Sewer Bricks, Fire Bricks, Building Bricks, Portland Cement, Road Paving Bricks and Blocks.

C.F. JACKSON & CO., Limited

Wholesale Merchants

Ormidale Block, Vancouver, B.C., and Liverpool, England

Direct Importers of:

Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc. etc.

ening in ingots, and we still quote: Cakes, $3.75; charcoal, $4.

Ingot Zinc—Prices are unchanged at 6½c. to 6¾c.

Scrap Metal—Although foreign prices for scrap iron are higher at present, the Canadian mills are holding it down on the local market. There is not enough activity in the Canadian trade to warrant an advance. Scrap copper remains at our last week's prices, but the supply seems very short We quote the following prices. Copper and wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 5-8c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed scrap, 75c. to 90c. per 100 lbs.; old rubbers, 5 1-2c. to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, September 15, 1905.

THE metal market continues strong, and the general market is much the same as last week, with the exception that galvanized sheets are firmer. Tin is still rather weak, and antimony continues very scarce. There is no change in prices.

Pig Iron—Many of the mills are booked ahead with orders and stocks are light. Quotations continue unchanged, as follows:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—There is a very active market. The mills are running to their full capacity. We quote: $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—The market continues weak.

Tin Plates—Demand is active with prices not so firm.

Galvanized Sheets— The demand is very good, and prices are much firmer than last week.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—The market continues strong, with stocks light and demand very active. Prices are very firm. We quote: Pig lead, $4 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—There is an active demand. Prices are steady: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Higher prices are looked for and present figures are very firm. Our quotations are as follows: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—In spite of the excesive prices ruling, there is an active demand. Stocks are very light.

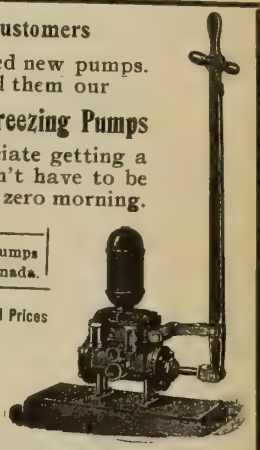
Old Material—Copper and brass are very firm and stocks are very light. Dealers' buying prices are as follows: Heavy copper and wire, 13 1-2c. per lb.; light copper, 12c. per lb.; heavy red brass 11 1-2c. per lb.; heavy yellow brass, 9 1-2c. per lb.; light brass, 7 1-2c. per lb.;

SANDERSON'S TOOL STEEL

"The most reliable tool steel on the market."

LARGE ASSORTMENT IN STOCK.

A. C. LESLIE & CO.



MONTREAL.

Ask your customers if they don't need new pumps. If they do sell them our

Standard Anti-Freezing Pumps

They'll appreciate getting a pump that doesn't have to be thawn out every zero morning.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, September 14, 1905.

A REVIEW of the whole iron industry justifies the general statement that it is enjoying great present activity and a brilliant promise for the future. The usual doubts as to an adequate amount of work for the Winter months have not even arisen this year and the outlook is for work at high pressure well into next spring. Added to this come reports of a distinct improvement in England, whose business has been lagging until lately, the Continent having sent cheerful reports since the early Summer.

There have been further heavy purchases of steel rails, the Pennsylvania Company leading with over 179,000 tons, distributed among the mills on the line of the road. The Missouri Pacific has added 25,000 tons to former orders and the Harriman lines 32,000 tons. The Soo line has purchased 10,000 tons and the Wheeling & Lake Erie 5,000 tons. The Tennessee Company has orders on its books aggregating over 210,000 tons, which will keep the works busy far into 1906, while the Colorado mill is committed far ahead. It is understood that the New York Central is negotiating for 160,000 tons and there are besides in the market one system for 35,000 tons and another for 50,000 tons.

An interesting situation is developing in relaying rails, which are very scarce, because the roads, finding it impossible to secure prompt deliveries on new rails, are loath to part with what relayers they have.

It is reported that to-day negotiations will be closed for the sale to the Steel Corporation of 10,000 to 15,000 tons of Bessemer pig for September delivery. During the past week smaller interests have taken moderate blocks of 2,500 and 5,000 tons of Standard Bessemer from dealers at the range of $14.85 to $14.90. Valley furnace and some fair sized lots of basic pig have also been placed.

It is estimated that the leading interests will need between 35,000 and 40,000 tons per month of Bessemer pig during the balance of this year.

There are indications of renewed buying of basic pig iron by the eastern steel makers. One large plate mill in eastern Pennsylvania has just purchased 20,000 tons for delivery running into 1906, and there are feelers which will probably lead to large business during the next fortnight.

Some pretty large requirements for foundry iron are coming up in the Pittsburg district, between 25,000 and 30,000 tons being referred to as the requirements of some large consumers. Some of the leading melters in the Chicago district are in the market for lots of 5,000 tons and under. Some business has been closed in the Cincinnati market, but on the whole the southern furnaces are not apparently pushing sales. Reports of the acceptance of $11.50 to $11.75 for No. 2, Birmingham, by some of the smaller furnace interests continue to come. The large companies are firm.

The estimating departments of the fabricators of structural material are exceedingly busy, so that the prospect of a large volume of work is excellent. The pressure for deliveries of material continues heavy.

In the plate market there has been increasing activity in anticipation of an advance. Thus far the tendency toward higher prices has found its only expression in the withdrawal of the usual $2 concession in the price of narrow plates, 14-inch and under.

The tonnage in the wire trade continues heavy. Prices, which have been ruling for some time past on the basis of 1.70c per lb., have been advanced to 1.75c.

The pipe trade is active. It is stated that the National Tube Company has 93 per cent. of its capacity at work.

The monthly blast furnace returns collected by The Iron Age show that capacity in operation remained almost stationary during July and August, the weekly output being at the rate of about 410,000 tons. The production during August is estimated at 1,841,000 tons, of which the Steel works produced 1,186,050 tons.

LONDON METAL MARKETS.

From Metal Market Report, September 13, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 48s. 6d, and Scotch warrants at 47s. 6d, making prices as compared with last week 3d higher for Middleboro and 2s. higher for Scotch warrants.

Tin—Spot tin opened weak at £146 7s. 6d, futures at £145 12s. 6, and after sales of 140 tons of spot and 370 tons of futures closed easy at £146 2s. 5d for spot and £145 10s. for futures, making price as compared with last week £2 10s. 1d lower on spot and £2 7s. 6d lower on futures.

Copper—Spot copper opened weak at £69, futures £68 17s. 6d, and after sales of 100 tons of spot and 250 tons of futures closed quiet at £69 for spot and £68 17s. 6d for futures, making price as compared with last week 5s. lower on spot and 2s. 6d lower on futures.

Lead—The market closed at £13 17s 6d, making price as compared with last week 7s. 6d lower.

Spelter— The market closed at £26, making price as compared with last week 7s. 6d lower.

The Dominion Antimony Company, St. John, N.B., have let the contract for a $75,000 plant at their West Gore mine, Nova Scotia.

Nova Scotia Trade News

Halifax, N.S. Sept. 13.

TRADE during the past week has been remarkably quiet. Jobbers report orders coming in very slowly. This fact is attributed in part to the approaching Exhibition in this city. Dealers say that their customers hold back their orders, and taking advantage of the cheap excursion rates on the railways they come to the city and purchase supplies direct. The fair this year promises to be most successful. Manufacturers are taking a deeper interest in it, and some of them are making large exhibits.

The market has seen several changes since last report. Lead pipe has advanced ten cents per hundred pounds. It is now quoted at $4.99 per 100 pounds. Sheet lead is also stronger. The advance is said to be due to the rise in the price of pig lead. Sheet zinc is being quoted at $7.50 for No. 8. This is for 100 pounds (cash lots) and over. Less than cash lots, 8 cents per pound. The advance amounts to 25 cents per 100 pounds. Zinc spelter is quoted at $7.25 per 100 pounds, an increase of 25 cents on the hundred.

Dealers are also looking for an advance in brass and bronze goods. The Maritime manufacturers have conformed to the request of the trade of the Province and dropped the price of wire nails to $2.15 base. This means a total reduction of 15 cents, and local dealers are now in a much better position to compete with the Montreal men.

There has been a drop in the price of cotton sheets and mounted nets. Cotton sheets (standard) are now quoted at $4.65, and mounted cotton (standard) at 6.35. These are jobbers' prices. The retail prices are beyond those figures.

The Autumn trade gives promise of being a little backward. The time has arrived when the lumbermen should be ordering their supplies, but so far none have come to hand.

A new find of coal is reported at Debert, Colchester county. It has long been supposed that other good seams were beneath the one being worked, and last spring two Government core drills were put to work, and within the last three weeks three new seams have been discovered, underlying the one being worked, at depths of 80, 100 and 140 feet. These seams range in thickness from three to fifty feet of solid coal. The quality of the coal is said to be exceptionally good.

The announcement during the week that the large fish and former hardware firm of Black Bros. & Co., Limited, had gone into liquidation caused quite a surprise throughout the Province. The firm of Black Bros. is heavily indebted to the Bank of Montreal. William Duff, of Bridgewater, has been appointed receiver by the court.

Prices quoted here follow :

Lead pipe	$ 4 99
Sheet zinc, in casks	7½c.
" " 5 sheets and over	7¾c.
Less	8c.

Suggest a "Metallic" Front to your neighbor for that new building.

Pages 384 to 399 of our Catalogue show styles that cannot fail to please him and reveal to him possibilities in sheet metal work he never thought of. A quick sale at a good profit will surely be the result.

We make up these fronts in a great variety of beautiful designs.

Nothing is too simple or too intricate for us to undertake.

New trade and extra profits are in store for live dealers who don't overlook the local possibilities of "Metallic" building materials.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:

"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Siding (stone, brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Material of every description.

402

MINES AND METALS.

Active work is progressing at the new gold find at Seal Harbor, Guysborough county, N.S.

* * *

The Nova Scotia Steel & Coal Co. are opening another new colliery between Sydney No. 3 and Little Bras d'Or cut.

* * *

A valuable deposit of fire clay is stated by the local press to have been found within the limits of the town of Baddeck, C.B. It is located on property owned by Mr. C. M. Campbell, and a depth of 12 feet of material has been found so far. The Dominion Iron & Steel Co. are making tests of the clay, which is described as of superior quality.

* * *

Dr. Haanel, Dominion Superintendent of Mines, points out that in the United States some anxiety is beginning to be manifest about the iron supply. Formerly they would not look at ore containing only 55 per cent. of iron, but now they were very glad to get it. Very soon they would be willing to take ore with much less content of iron. In the United States also much less discrimination is being shown with respect to the sulphur content of ore.

R. E. Harris, president of the Nova Scotia Steel Company, completed an important deal in Newfoundland last week, when he purchased from the local owners the submarine ore areas on the north of Belle Isle. The ore deposits on the island are beginning to run short, and from present appearances it looks as if the supply will last but a few years longer. It is this that has compelled the company to look elsewhere, and they will now determine whether or not the ore runs out under the sea. One of their tunnels is about one hundred feet from the sea and about the same distance below the sea level, and the ore has increased in thickness by nearly two feet since going underground. Should the venture prove a success, the company will have a supply for many years, but it will cost them more than $100,000 to prove that the ore is workable.

LEAD OUTPUT IN B. C.

FULL returns of the lead production in British Columbia during the fiscal year 1904-1905 and the bounty paid by the Dominion Government are at hand. The returns from southeast Kootenay show a very large increase over the figures of the previous year.

The returns of shipments to the Canadian Reduction Works at Trail from July 1, 1904, to June 30, 1905, show that the St. Eugene mine produced 6,247,508 lbs. of lead, and the North Star 2,082,903 lbs. of lead.

The total shipment of the Province was 29,874,756 lbs. of lead; of this amount 70 per cent. must be credited to the St. Eugene and North Star mines.

The total of lead produced and treated in Canada amounts to 33,730,546 lbs., and the bounty paid amounted to $240,288.

The amount of lead exported was 21,972,988 lbs., on which the bounty paid was $96,579. The grand total for the year is 55,703,534 lbs. of lead produced and $336,886 paid in bounty.

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Sept. 15, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

WORK is being rushed ahead rapidly on the addition to the Market street warehouse of G. F. Stephens & Co. In a few weeks the additional storey will have been added, and the firm will have the increased floor space which the growth of their business demands.

* * *

Business is very active, and the staff of one or two houses are working overtime in the effort to keep pace with the rush of orders. All lines of general hardware are in strong demand, the movement of threshers' supplies of all kinds being particularly heavy. Values are steady throughout.

* * *

Lanterns—Department store competition is demoralizing the retail trade. wholesale prices are as follows:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Wire—Business is brisk. We quote:

Barbed wire, 100 lb	$2 85
Plain galvanized....6 to 8	3 39
" 9 2 50	2 90
Plain galvanized....10	3 50
" 12	3 10
" 13	3 20

" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g. hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 00
" double bitts	12 00 to 18 00

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is very active at following unchanged prices:

Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Ammunition, Etc.—All lines of ammunition for Fall shooting are in exceptionally brisk demand. Discounts are quoted as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—For small quantities the price is 20 cents per lb. Concessions are obtainable for large quantities.

Iron and Steel—The market is active and prices are steady. We quote:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—Business is active at following unchanged prices:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—Quoted as follows:

Apollo, 10 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

INGERSOLL, ONT.

NEW OFFICES IN TORONTO.

The D. M. Steward Mfg. Co. of Canada, Limited, have taken offices in Saturday Night Building, 26-28 Adelaide street west, Toronto. They have also a manufacturing plant in another part of the city.

Gas tips and machinists' crayons are the lines manufactured by this firm in which the hardware trade will be interested.

Mr. Robert Bruce Steward is the president of the Canadian company.

PERSONAL MENTION

Toronto.

L. Meiklejohn, Stirling, spent a few days in Toronto last week.

J. Henry, Orono, called on Toronto hardware jobbers a few days ago.

W. Rankin, Ottawa, called on local hardware jobbers a few days ago.

Geo. Barfett, of Barfett Bros., Newcastle, was in Toronto a few days ago.

T. N. Waite, hardware merchant, Picton, was a visitor in Toronto a few days ago.

George T. Peppal, of Samuel, Benjamin & Company, is on a week's vacation.

W. F. McPherson, hardware dealer, Prescott, visited Toronto and Hamilton last week.

J. H. Jackson, of Lewis Bros., Montreal, was a visitor in Toronto during the past week.

Adam Taylor, of the Taylor-Forbes Company, Guelph, was a visitor in Toronto this week.

W. W. Mountain, traveling representative of the Sherwin-Williams Paint Co., Cleveland, was a visitor in Toronto this week.

The Fletcher Mfg. Company, 440 Yonge street, have nearly completed the installation of a handsome marble front to their store.

Charles F. Smallpiece one of the directors of the firm of Lewis Brothers, Montreal, was in Toronto renewing acquaintances with old friends a few days ago.

Charles Soules, who recently purchased the hardware store of Messrs. C. & E. Mason, Richmond Hill, was a caller at the Toronto office of Hardware and Metal on Thursday.

James Taylor, of the Taylor-Forbes Company, Guelph, has been in Toronto for a couple of weeks in charge of the company's branch office during Mr. Flett's absence in the west.

Canadian importers of loaded shells have been having considerable difficulty in securing stocks from England. Messrs. Rice Lewis & Son have, however, received two carloads during the past week. The English plants have been overworked.

Fred J. Haney, a popular young hardware merchant from Strathroy, was in Toronto during the past couple of weeks, he having captured one of Toronto's fair daughters in the person of Miss Annie M. Saul. The happy couple visited New York and Boston on their honeymoon.

Montreal.

Mr. McMurtry, of Picton, Ont., is in Montreal this week.

A. W. Humphries, of Parkhill, spent last week in Montreal.

Mr. Meunier, of Chambly Basin, was in the city on business Wednesday.

A. H. Campbell, of A. C. Leslie & Co., metal merchants, has returned from a brief vacation.

F. Cyr, of St. Hermas, Que., paid a visit to the city this week, in connection with his business.

J. J. Murphy, the well known contractor of Quebec, was in the city for a couple of days last week.

Mr. Arel, contractor, of Valleyfield and Beauharnois, Que., visited the local supply houses during the week.

Chas. Dietrich, of Shurly & Dietrich, saw manufacturers, Galt, Ont., called upon the local trade this week.

Herb. Seybold, of Seybold, Sons & Co., wholesale hardware merchants, enjoyed a trip to Quebec this week.

Arthur J. Owen, of Franklin Saunders & Co., spent a few days last week in Toronto and other western cities.

Mr. Griffin, representing the J. Stevens Arms & Tool Co., of Chicopee Falls, Mass., called on the trade last week.

B. Rogers, of Alberton, P.E.I., spent Tuesday in the city, on his way home from Toronto and other western cities.

D. R. Logan, manager of John Forman, manufacturer of electrical supplies, is at his home in Toronto on his holidays.

J. R. Terrill, the genial city traveler for Caverhill, Learmont & Co., is in Ottawa this week, shaking hands with his many friends at the Capital.

Walter Grose, president of the Ontario Lantern and Lamp Co., is taking a trip to the west, visiting Toronto, Hamilton and London. The trip will consume two weeks.

Messrs. G. W. Dunn and G. M. Gray, of the traveling staff of Lewis Bros., Limited, spent Saturday in the city. They report splendid prospects for Fall business.

The salvage of the Starke Hardware Co., recently burned out of their premises on St. Peter street, is being disposed of at the old warehouse of Lewis Bros., Limited, on St. Sulpice street.

J. A. Body, of London, Eng., who was identified with the Winnipeg Linseed Oil Mills, was in town for a few days this week, accompanied by his son, both bound for the Prairie City. The Winnipeg Linseed Oil Mills have recently been acquired by the Canada Paint Co., of Montreal.

Reginald O. Simmons, of London, England, and latterly of Montreal, has decided to locate in Yokohama, Japan. He wishes to secure some reliable agencies for manufacturers who are anxious to promote trade in the Far East. Mr. Simmons has excellent social and financial standing and would urge parties interested to apply promptly as it is his intention to sail for Yokohama early in October. Further information might be obtained by communicating with the offices of the MacLean Publishing Co., Montreal.

Mr. Jenotte, with L. H. Hebert, wholesale hardware merchant, was married Monday morning of this week. Before deserting bachelorhood, he was honored with a complimentary dinner at the Canada Club, by his business friends, including T. H. Newman, of Caverhill, Learmont & Co.; Robt. Starke and W. Starke of the Starke Hardware Co.; Mr. Strange, of Lewis Bros., Limited; Mr. Kinghorn, of Montreal Rolling Mills; A. E. Hanna, of the Dominion Wire Co.; Mr. Esmond Peck of the Peck Rolling Mills; Mr. Drake, of the Canadian Axe and Harvest Tool Co.; Messrs. Geo. and W. Haldimand of Geo. Haldimand, Sons & Co., and F. Bacon of Bacon Bros.

Winnipeg.

H. R. Flett, Toronto manager of Taylor-Forbes Company, Limited, is in Winnipeg this week.

A. B. Kent, secretary of Marshall Wells Co., left last week on a trip to the coast and the Portland Fair.

The Gurney Foundry Company employes held an enjoyable excursion on the Red River on the afternoon of Labor Day.

T. L. Walden, western manager of Caverhill, Learmont & Co., returned to Winnipeg on the 8th from a flying business and pleasure trip to Montreal, Toronto and other eastern points.

In the absence of Mr. J. Irwin on his wedding trip the western office of Henderson & Potts Co., Limited, is in charge of H. V. Lawlor. Mr. Lawlor looks the part as he occupies the manager's chair, but he is better satisfied with the more strenuous life on the road.

C. D. Walden, of the Pease-Walden Co., Limited, went west last week in the interests of his firm, visiting Regina, Calgary and other western towns. He will be absent some time, and no doubt the sales of the Pease line of heating goods will show a considerable increase as a result of his trip.

J. Irwin, western manager of Henderson & Potts Co., Limited, went east last week on an important errand. His marriage to Miss Irene Boxwell Cooper, daughter of W. E. Cooper, Montreal, was announced some time ago to take place at Chalmers Church on September 14th. Hardware and Metal extends congratulations to Mr. Irwin and wishes the newly wedded couple long life and prosperity.

Elsewhere.

G. S. Kilbourn, assignee of the estate of the Strathy Wire Fence Company, Limited, Owen Sound, has issued his second and final dividend sheet showing on hand for distributian the sum of $1,226.26, equivalent to a dividend of 6.41 cents on the dollar.

We understand that the Ontario Lantern and Lamp Co., Limited, Hamilton, have withdrawn all prices on these goods on account of the continued advance in raw material of all kinds. These goods have been sold by the manufacturers at cost or under, since the first of the year, but the steady rise in tin plate, brass and the other materials going into lanterns and lamps, will now compel them to put up the price, and a sharp advance in this staple line may be looked for in the near future.

Many readers of Hardware and Metal will regret to learn that Mr. Geoffrey Morrow, of the firm of Wm. Stairs, Son & Morrow, Limited, lies dangerously ill at his residence, "Bircham," Northwest Arm, Halifax, N.S. Mr. Morrow's health has been very indifferent for some time past, and a trip to Florida last Spring did not result as beneficially as was desired. Since his return Mr. Morrow has been in the sanatarium at Molville, but has recently been moved to his home. The complaint is Bright's disease, and the doctors have very little hope of his recovery.

Intercolonial Railway Exhibit.

Hot and tired as the visitor at the Exhibition may be, from much wondering and gazing, a refreshing and cooling feeling is experienced as one, on entering the original Art Building, turns to the first exhibit to the left and finds himself in the spacious rooms presided over by Mr. A. E. Barton where the Intercolonial Railway has its exhibit. A sense of nearness to nature is felt, produced no doubt by the manner in which the room is finished and decorated. The walls are overlaid with hemlock bark and logs of the same wood form the casing of the two large doorways. The protected by a rustic railing. On the fish are artistically grouped while a large illuminated sign bearing the trade mark of the Intercolonial Railway faces the visitor as he enters the main doorway. The pictures are enlargements from actual photographs illustrating some of the beautiful scenery through which the Intercolonial Railway passes, as well as typical scenes of sports and recreation afforded by the districts connected. The mounted heads consist of moose and red deer from New Brunswick and cariboo from Newfoundland, all being fine specimens, the sight of which is calculated to thrill the ardent sportsman in search of stands on a table nearby bearing the sign, "I am little Johnny Bear."

A further treat is in store for the visitor to this exhibit, as through one of the walls a rock finished grotto is built. It gives an added charm and takes the visitor miles away from the busy scene around him. On the walls of this cave glass cases are neatly concealed, illuminated from the rear, and in these live specimens of New Brunswick sea trout may be seen. For the purpose of catching the latter, and to have the satisfaction of engaging in this pastime many visitors take trips every year to the region where they abound.

Regarding the Intercolonial Railway

Canadian National Exhibition—Intercolonial Railway Exhibit.

same effect is incorporated in the ceiling, except for a space running entirely around where a soft white light is diffused by a screen to the scene below. From the centre an inverted pyramid of the bark is suspended, the latter being surmounted by a cedar burl from which hangs an enclosed arc lamp. For evening illumination this is supplemented by four incandescent lamp clusters also placed at the ceiling.

The middle of the floor space is taken up by a fountain of running water encircled by growing ferns, the whole being the larger game. No angler could look walls pictures, deer heads and mounted at the panels of mounted fish without experiencing a desire for a chance at least of catching some of these fine specimens. They are salt water salmon, caught in the Restigouche, Matapedia and Miramichi, and are considered the gamiest fish in America. That the sportsman is not limited to deer hunting and fishing is shown by the presence of a large black bear, shot in New Brunswick, while a cunning bear cub itself as affecting service, cars, equipment and all the added appointments and comforts that make railroad travelling a luxurious outing, it is not surpassed by any line on the continent. In fact in many of these it is easily first. There is certainly no finer dining service, no better cars and no more substantial road-bed to be found anywhere, so that a more enjoyable outing could not be planned than a trip through the surpassingly beautiful country that may be viewed from a passenger coach of the Intercolonial Railway.

PAINT, OIL AND BRUSH TRADES

THE CASTOR OIL INDUSTRY.

IN most tropical countries, and notably in North and South America and India, there flourishes the plant from whose product is derived one of our most valuable medicinal and commercial oils. This plant was known to the older botanists by the name of Recinus (Communis), owing to the great similarity of its bean to the tick, a loathsome animal which has the same name in Latin. Another name given to the plant is "Palma Christi," but it is more generally known as the castor plant.

In size the castor plant varies from a shrubby plant to a tree 30 to 40 feet in height, according to the climate in which it is found. Its growth is, of course, more luxuriant in tropical latitudes. It is often cultivated as an ornamental plant on account of the bright green to dark red color of its palm-like leaves, which are also useful as food for some kinds of silk worm. The flower is comparatively inconspicuous, while the seeds or beans are contained in a pod, and much trouble is experienced in harvesting them. In India there are two crops annually, the seed being sown in May and November. Although plants will bear for two or three years, yet they are usually uprooted each harvest, and new seed planted. The beans vary in size, according to the species of plant, but all have a shinning black and white or black and brown mottled appearance, and are of an oval form, with a hard and brittle shell enclosing a very white and oily interior. In a natural state these beans contain a poisonous principle, but it is from them that the manufacturers crush one of the most extensively useful purgative medicines known, and the only one which, under certain circumstances, can be safely administered. This medicinal oil, when absolutely pure and cold pressed, has a slightly yellowish tinge. Its specific gravity is about .964, and as a lubricant it is the most valuable of oils.

The centre of the great oil crushing industry of England is the city of Hull, which, with a population of 250,000, is one of the most important sea ports of Great Britain. During the year 1904 the imports of oil seeds into the port were over 700,000 tons. From this city there is easy access by water to a splendid system of locks, and thence to nearly all parts of the world.

Situated on the banks of the River Hull are the works of the Hull Oil Mfg. Co., Limited, a company established some twenty years ago. During that time Mr. MacIlwaine, one of the two present managing directors, has devoted his energies to the extraction of rape oil, in connection with which he has invented and patented a number of processes. In 1897 the manufacture of castor oil on a small scale was begun, and the success which attended this effort encouraged the directors to erect a large and costly plant, with the object of increasing the output. This action, in conjunction with the strictest economies in working, has enabled the Hull Oil Mfg. Co. to compete successfully against Indian and foreign manufacturers, so that at the present moment they are the largest makers of rape and castor oils in the United Kingdom.

Their standard grades are: Medicinal oil of excellent color and absolute sweetness; first pressure oil, recognized as one of the standard English oils, and seconds oil, which is an extracted oil and yellow in color. The residuum of these oils has a ready market in the shape of a most valuable feeding meal, containing about 35 per cent. albumenoids, all trace of the poisonous voluble oil being eliminated in the process of manufacturing the castor oil. The manurial properties are well known, the "Homco" manure meal containing from 5½ to 7½ per cent. ammonia.

When importing castor oil from the East Indies the leakage is generally very heavy, and the wooden cases supplied in that country unsatisfactory. Taking a lesson from this fact, the Hull Oil Mfg. Co. pack their oil in 40-gallon barrels, 4 tin cases or 2 tin cases of 40 lbs. to the tin. These latter have proven to be the most handy for export, as they are easy to handle, and consequently arrive at their destination in first-class order.

B. & S. H. Thompson & Co., Limited, Montreal, were among the very first firms to appreciate the commencement of what was for England a new industry. With characteristic zeal they applied themselves to introduce into Canada the new Homco brand of castor oils, and their efforts were so successful that the Hull Oil Mfg. Co. soon appointed them their agents for Canada. In their hands the Canadian business of the firm has had a wonderful development, and there are few hardwaremen in our country who do not handle the famous "Homco" brand of oils.

GOOD PAINTS PAY BEST.

The old saying that "it is economy to buy the best," applies to no article of commerce more aptly than to paints, says St. Paul Trade. Cheap paints are always dear, no matter what the price. Good paint will last five times as long as the cheap kind, hence there is no question regarding the genuine economy of its choice. Dealers in paints can always rely on it that the best grades are always the safest to keep in stock, and to insure the holding of their trade, the better grades naturally cost a trifle more, but the satisfaction they give to both dealer and user, make ample amends in the long run and in other ways make up for the few cents difference of cost.

Paint and Oil Markets

QUEBEC.

Office of Hardware and Metal,
232 McGill Street,
Montreal, September 15, 1905.

SOME important price changes are to be noted in our lists this week. In spite of a good volume of orders for linseed oil that article has dropped 2c. all round from our last price list, though it is felt by the trade that this is only a temporary condition, and a recession of prices is in order.

Turpentine continues to gain strength and at time of writing an advance of 1c. is reported over last week's prices. The market is very strong and still further jumps are not unlikely.

As anticipated by Hardware and Metal it will be noticed in our price quotations that there has been an advance of 15c. per 100 lbs. in ground white lead. This advance we are assured will be maintained and it is quite probable that a further appreciation of 10c. per 100 lbs. will take place within a few days. This forecast is based on the fact that good-sized orders are flowing in and excess stocks are being rapidly depleted. The greatest firming influence, however, was the wrecking of the Leyland liner Virginian, which had 200 tons of white lead in her cargo.

Turpentine—The strength of the market is gradually forcing the market up, and we are this week quoting another advance of 1c. We give prices: Single barrel 91c. per gallon. Two barrels or over, 90c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—A drop of 2c. is reported but it is not thought that the weakness will be permanent. Our prices are as follows: Raw, one to four barrels, 46c.; 5 to 9 barrels, 45c.; boiled, 1 to 4 barrels, 49c.; 5 to 9 barrels, 48c. f.o.b. Montreal. Net 30 days

Ground White Lead—The expected advance has occurred as a result of the near approach of the total working of the new tariff. There was a large consignment of white lead on the Virginian which was wrecked in the lower St. Lawrence as reported last week. This lead formed a part of orders sent in some time ago, and its loss will make it impossible to buy any more at the old price. We quote as follows: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—A brisk turnover is reported, but no change has occurred in the price. We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc—We quote: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (ground in oil—Prices are unchanged, a very satisfactory business being shown. Our prices are: Pure 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty— Current prices are as follows: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral— Prices are firm as follows—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Good orders are being received for shipment at the following figures: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—The advance in gum has boosted varnish up about 10c. in some quarters, though we are still authorized to give the following minimum prices: Pure white in barrels, $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—In anticipation of the close of navigation, good sized orders are flowing in, and the prices are firm at our last quotations: From $1.20 to $1.40 per gallon.

Castor Oil—The recently advanced price continues firm and a fine demand is reported. We quote: 8 1-2c. to 9 1-2c. according to lots.

Refined Petroleum—Crude oil has been advanced by the Standard Oil Co., and advice to raise the price of refined petroleum is momentarily expected. In the meantime, the market may be said to be in a very firm condition, and large orders are being filled daily. Those merchants who foresaw the advance and ordered early, are considered fortunate. At time of writing the price last quoted is still ruling.

ONTARIO.

Office of Hardware and Metal,
10 Front Street East,
Toronto, September 15, 1905.

NO particular changes have taken place during the past week, although, as foreshadowed by us a week ago, white lead has taken a stronger position, and is being quoted at 15c. advance. The ruling figure is now about $5.55 or $5.60, as there has been considerable margin between the figures listed by different houses on white lead during the past six or eight weeks. The impossibility of buying any more raw material at low prices will now stiffen the backs of jobbers, and uniform prices should soon prevail, the possibility be-

WAGNER'S CARRIAGE PAINTS

This line has a wide fame, and is regarded as standard by carriage makers. It is important that you should know that we are the only firm manufacturing, or who have ever manufactured this particular line of colors for the trade.

—Many imitations are offered. Be on your guard.

—Wagner's Carriage Paints are excellent for refinishing vehicles in an easy, handsome and economical manner. They are perfectly adapted to finishing anything inside or outside requiring a durable gloss finish ; also for ornamental purposes.

THE CANADA PAINT COMPANY, LIMITED

Paint and Varnish Makers.

ing that the ruling figure may go as high as $5.75.

Linseed is weaker in the Eastern markets, but there has been no change in the figures quoted locally. Turpentine also continues unchanged.

The Rockefeller interests in the United States have advanced crude oil 3c. per gallon, but there has as yet been no corresponding movement here. The probability of an advance and the fact that the close of navigation is approaching accounts for the increased business being done.

Glass is unchanged, and the local stocks are reported to be satisfactory. No discounts are being given on prices quoted, the former 15 per cent. off having been cancelled. While prices are expected to increase in firmness, there done not appear to be very much reason to look for much higher prices at present.

General business continues to be quite satisfactory.

White Lead—Ex Toronto, pure white $5.55 to $5.65; No. 1. $5.12½; No. 2. $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs.. $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white. $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 51c.; boiled, 54c.; 5 to 9 barrels, raw, 50c.; boiled, 53c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrel, 92c.; 2 to 4 barrels, 91c.; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

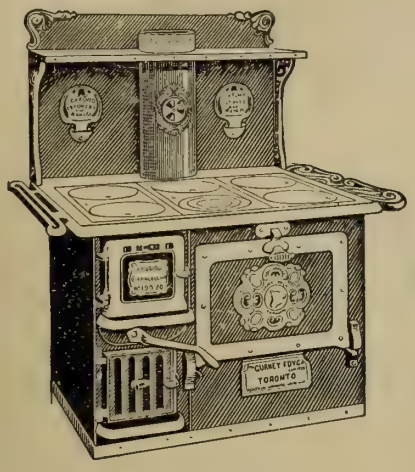
Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Prospects for a good Fall trade are excellent. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass—See current market quotations.

WINDOW GLASS—MONTREAL.



The misfortune to the Virginian seems to have been the last straw needed to boost the price of window glass. For a long time the scarcity in the local market has been acute, but there was a reluctance to raise the price, owing to the already abnormally high figures demanded. Ten thousand boxes of glass were included in the cargo of the Virginian, and these will be an almost total loss, even if the vessel is now safely floated, owing to breakage and soaking by water.

In consequence local jobbers have found it necessary to advance the price of glass all around, as will be seen by consulting the price list below : First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feeth, $6.25; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50 seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

PREPARATION OF ZINC WHITE.

The latest method for making zinc white is to volatilize the metal in the electric arc, and then burn it. The two carbons are placed in a crucible, which is kept full of zinc, and is placed in a closed vessel through which a current of air passes. The electricity volatilizes the zinc very rapidly, and the vapor rises into the current of air, which not only supplies the oxygen necessary for the combustion which immediately takes place, but carries the zinc oxide smoke into a large chamber through a flue. In this chamber the oxide settles to the ground, and is cleared out at intervals with shovels. The air exit from this chamber is provided with a muslin filter, to prevent the escape of any of the zinc oxide. The zinc is best fed into the crucible in the granulated form, and the crucible should be so mounted that, when necessary, the carbons can be withdrawn and the slag run out by tilting the crucible.—Le Mercure Scientifique.

The basis of trade that lasts and creates other trade is **value.**
Range Buyers have never failed to get value in fullest measure in

THE

Oxford Chancellor Range

For years its performance has made good its promise, and satisfied housewives everywhere are constantly verifying its virtues by words of praise to many friends.

Wise dealers soon conclude that the reputation of Oxford Ranges, backed by the aggressiveness of Oxford advertising, make them a very good proposition to handle.

They make a very attractive store display, yield a good profit and assure satisfaction to all concerned.

HEATING AND PLUMBING

RESIDENCE HEATING BY HOT WATER.

Paper Read by E. F. Capron before the American Society of Heating and Ventilating Engineers' Convention at Chicago. Cuts loaned by courtesy of The Plumbers' Trade Journal, New York.

DURING the past ten years the writer has installed a number of hot-water heating plants, using both direct and indirect radiation, and the results obtained have been very satisfactory, both with the overhead and the up-feed systems of circulation.

The heating apparatus described in this paper was installed in a three-storey and basement brick residence, having exposure on all sides, with no protection from surrounding buildings.

The cubic contents of the building is 98,304 cubic feet, wall exposure 7,182 square feet, glass area, 1,416 square feet, and it is heated by 2,518 square feet of direct and 1,200 square feet of indirect surface, with 285 square feet in the tempering chamber.

There are two boilers of the locomotive fire-box type, brick setting, each containing 279 square feet heating surface and 9.2 square feet grate area, one boiler being used in ordinary Winter weather (15 degrees above zero). The automatic system of heat regulation controls the temperature in a number of rooms and also controls the draught to boilers.

The system of piping is what is called "up-feet" except in the sun-porch, which is one pipe. All piping is concealed and covered. Each pair of risers has controlling valves with drip valve for draining, and each stack of indirects is treated in the same manner.

The air for indirect radiators enters the building through two windows, having shutters which are easily adjusted, passes through cheese-cloth screens and through tempering radiators into a main cold-air room, from which room galvanized iron ducts carry the air to the various radiators.

There is a by-pass damper under the tempering radiators, controlled automatically, the thermostat controlling same being located in cold-air room.

Each individual stack of indirect raditors has a by-pass damper, allowing tempered air being admitted to the rooms when the temperature raises to 70 degrees. The rooms heated by indirect radiation are ventilated by means of fireplaces.

The house had been satisfactorily heated, but the plant is somewhat complicated for the ordinary house man to operate and obtain the best results.

During the month of February of this year the writer made a test in the operation of the plant, and the results of which are given below:

Average amount of coal consumed each day, 718 lbs.

Two boilers were in operation on the 15th, and only one boiler on the 19th and 20th.

At the time the test was made, the automatic regulation was not in perfect order until 11 a.m. on the 20th, and since that time the plant has been working very successfully, and the consumption of fuel used has been reduced considerably.

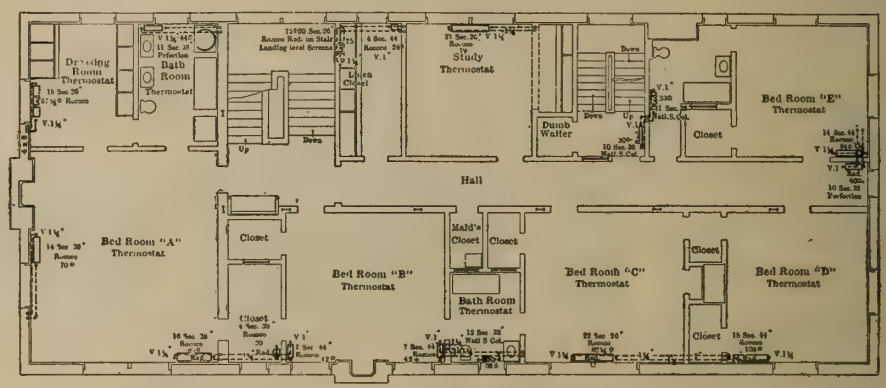
In plants of this description, it would be a good plan for architects and engineers to include in specifications "a week's operation by competent persons," as the ordinary house man is not capable of operating a plant of this description in a satisfactory manner.

Residence Heating by Direct and Indirect Hot Water. Plan of Basement.

PREVENTING TRAP SYPHONING.

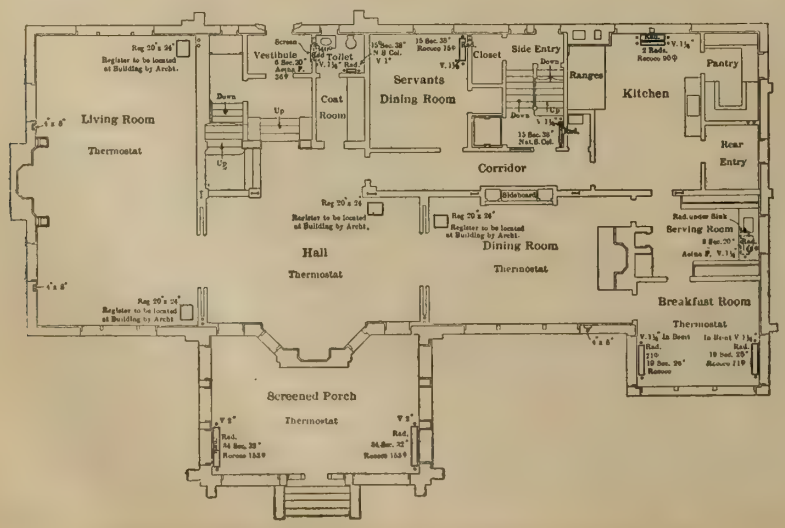
Written specially for HARDWARE AND METAL.

THE question is often asked by architects and owners of dwellings: What can be done to prevent the soil pipe from freezing after it passes through the roof, and thereby allowing the trap under the various fixtures throughout the house to syphon out with the result that sewer gas escapes wherever the fixtures are located? We all know what this means in a house all closed up. It therefore seems to me this should be an important question among plumbers. There have been several devices tried in past years, such as having the soil pipe encased with a galvanized iron jacket, with asbestos or mineral wool packing between jacket and soil pipe. This did not prove altogether satisfactory. It was found where the main trap on drain had been dispensed with the mouth of soil pipe froze over, but where the main trap on drain was in use this device of the many tried has given the best results.



Another device was a galvanized jacket about 1 in. larger than soil pipe, with perforated holes at top, the other end was extended down through roof and left open under attic ceiling. This proved a failure, as the cold air dropped down into the room, in place of the hot air going up, as was intended, thereby helping to freeze pipe, in place of preventing same. The writer is not prepared to suggest any device, for to do so would entail a great deal of expense, but would rather suggest a simple remedy to prevent trap from syphoning when soil pipe freezes up.

In the ordinary house we have two stacks of pipe, one for soil and waste water, and the other to back vent the trap of fixtures, connected as near to the water in the trap as possible, and on the sewer size of trap. This pipe generally extends from the basement fixtures, (if fixtures are located there), if not from the kitchen sink, and extends to about three feet above highest fixture and connected into soil pipe. Where the vents for bathroom fixtures are connected into same, the size is increased proportionately. Now, if we take this pipe, which is generally 3 in., extend same down to basement and connect with drain near to connection for soil pipe, by this we could have a circulation of air, especially when any fixture was discharged which would prevent, not only the trap from syphoning, but the end of the vent pipe from stopping up with rust and sediment, as we often find it. The expense of connecting vent pipe into drain would add little to the cost of a plumbing system in either small or large house. I believe the future will find a great many changes in our present system of plumbing and ventilation, when it will be impossible for any trap to syphon, no matter what the weather conditions may be.



Let us foreshadow a few of the changes that may come: That the drain in every building will be constructed of iron. Our experience has shown us in many instances how unreliable the tile drain is, more especially when laid in a poor foundation, and as we often find in altering work, or when a test is applied, an opening has been made which is easily done in tile, either for the waste of some fixture or for weeping tiles laid around the foundation walls.

Some years ago the writer had occasion to apply the smoke test to a building where the basement or cellar was used as a dairy. The dairyman, to get rid of the waste water from chilling the milk and washing the cans, had a hole cut in the tile drain, with the result that sewer gas was a constant compound with the milk. We have instances of the same nature every day. Now, with a heavy iron drain, the ordinary individual could not cut a hole, and the lengths being made longer and joints caulked with lead, a poor foundation would not affect the iron pipe as it will the tile.

The iron pipe should extend at least five feet outside of building. The main or intersecting trap should be placed immediately inside wall of building and left so that it can be examined at all times. At the present time the law says the main trap must be placed at the street

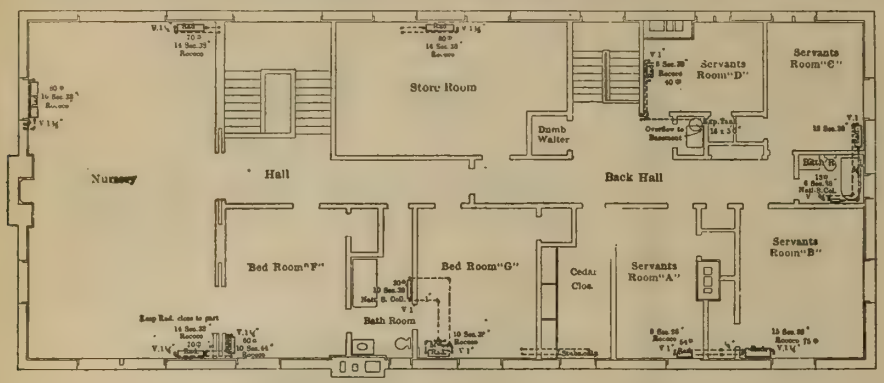
GET A GOOD THING Fairbanks Renewable Disc Valve

KEEP IT GOOD We do.

Then EVERYBODY WANTS IT. That's right.



WHATS THE DIFFERENCE ?

Fairbanks Renewable Disc Valves are strongly built. Nothing cheap or skimpy about them. The Disc is renewable and can be changed in a moment without loss of time. There are no nuts, bolts or springs used in our Renewable Disc Valves, therefore no chance of any small pieces falling in the valve or getting in the pipe line and causing trouble and very heavy damages at times. For sale by all leading dealers.

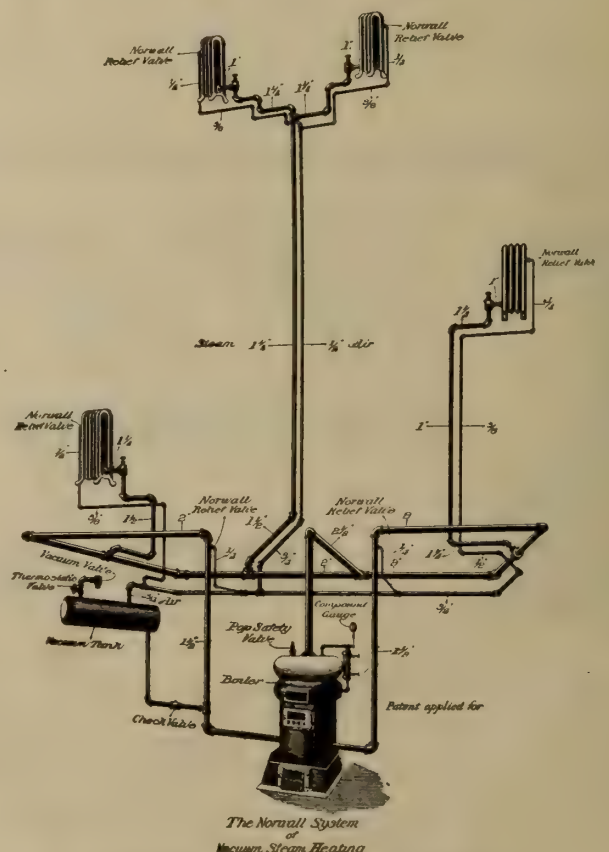
THE CANADIAN FAIRBANKS CO., Limited.

Montreal Toronto Vancouver Winnipeg

line, and if anything gets into the trap which can not be moved from the cleaner the ground must be opened up, which is very inconvenient and dangerous to the occupant of the building. From the house side of the main trap a 4 in. pipe should be taken off, which is termed a breather. This pipe should be extended back through cellar to near line of soil pipe or some other convenient and warm location, and carried up through building above roof and extended at least three feet above soil pipe. By this means no matter what the weather conditions were a free circulation of air would be assured at all times. The fresh air would be taken in through soil pipe and the foul air would escape through breather.

Residence Heating by Direct and Indirect Hot Water. Third Floor Plan.

Another change which might take place will be the construction of back vents, which, in the opinion of the writer, are defective, especially from baths and W.C.'s. The bath vent in most cases is carried under the floor with a slight fall, and after being in use for some time and examined is found clogged up. The same is the case with the vents of nearly all fixtures installed under the present system. The vents of all fixtures should be carried up perpendicular at least 6 in. above the bottom of fixture, so that when any fixture did stop up it would show before it got into the horizontal vent, when the sediment running after the trap has been cleared.



A change which will surely come is the overflows from fixtures, especially from basins in the P.O. bowl, which are so universally used. There is a small, square-cornered passage cast into the bowl, and in these corners, which can never be cleaned as the inlet from basin is through small perforated holes, filth collects, sending out a disagreeable odor. All basins should be fitted with a simple standing waste, which can be easily taken out and cleaned. The basin to be made after the style of the Simplex, but without the recess. In conclusion, I hope the efforts of the future will be as beneficial to all as they have been in the past. G. C.

VACUUM STEAM HEATING.

WHEN steam heating first received attention the piping system included a supply main and a return working under a pressure. Many advancing steps have been taken since to one-pipe systems heating with exhaust steam, and the last step that is now attracting wide attention is the various vacuum systems which provide for exhausting the air from the pipes and radiators so that the steam is more effectively distributed. The piping system and apparatus for creating a vacuum shown in the diagram is offered by the Norwall Mfg. Company, Chicago and New York, and is known as the Norwall Air Line system of vacuum steam heating. This system contemplates the use of the Norwall vacuum appliances in connection with the ordinary low pressure system of steam heating, and while the drawing illustrates a single pipe system, the vacuum system is equally applicable to the double pipe system or any system of low pressure steam heating.

The relief valves used in connection with this system of steam heating are simply vents having restricted outlets opening when steam is turned on, permitting the air, steam or water to pass through them into the air lines, through which it is conducted to the vacuum tank in the basement. When the radiator steam valve is closed this relief valve closes, thereby preventing short circuit of the steam back into the radiator through the relief valve. On the vacuum tank is placed a venting vacuum valve, and between the venting valve and the tank is placed a thermostatic valve. As the air passes into the tank from the radiators the venting valve permits its free exit either into the basement or a chimney flue until all of the air from the entire system is exhausted in this manner. As soon as the steam reaches the vacuum tank and seeks to find outlet through the thermostatic valve this valve automatically closes, thus preventing the egress of steam from the tank. The tank having by this time become full of steam becomes a condenser and in this manner creates a vacuum within itself, thus assisting in maintaining a complete vacuum in the radiators. The tank is connected directly with the main return pipe below the water line; the pipe leading from the tank being fitted with a check valve between the tank and the return pipe insures return of all water of condensation to boiler, while the check valve prevents the water from the boiler backing up into the vacuum tank.

One advantage claimed for the use of the Norwall Air Line system of vacuum heating is that it entirely dispenses with the automatic air valves in connection with the radiators. The operation of the relief valves as above described insures a complete and rapid circulation of steam at atmospheric pressure throughout the entire system. It does away entirely with any liability of a leakage of water, as in case of the radiator becoming water logged the water which passes through the relief valve simply finds its way back to the boiler through the air lines and vacuum tank. After the air

Norwall System of Vacuum Steam Heating.

Think it Over!

Would in not pay you better

to adopt something in your business, even though it is comparatively new, that has already proven a great success?

Nowadays people like new things provided they are an improvement over what they have been long accustomed to.

has been once expelled from the system and pressure ceases in the apparatus the venting valve on the vacuum tank automatically closes and prevents the return of air to the tank and in this manner to the system. With a tight job in all respects, pipe, fittings, boiler connection, &c., it will be possible to operate under vacuum as desired.

The company recommends the use of the Norwall Packless radiator valves for good work, on the ground that its stem is vacuum proof and requires no packing. The system can, it is emphasized, be quickly and cheaply installed on any system or low pressure steam heating, new or old, and its use insures a fuel saving of 20 to 40 per cent.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, September 15, 1905.

LEAD weakened somewhat during the week just past, but recovered its tone and is now back to the prices quoted in our last issue. No change is noted in lead pipe. At time of writing no definite statement can be made concerning the likely condition of this market in the near future, as fluctuations are probable. The declaration of peace between Russia and Japan seems to have put an end to the steadiness of lead.

In soil pipe and fittings revised lists are now out, but changes are quoted only in some particular sizes, where an extra 5 per cent is given. On the whole however, the prices given last week will cover existing circumstances.

These are the only features of note, on a market which still maintains a wonderful activity. Good sized orders are pouring in from all parts of the country, and these are well assorted.

The advancing season has quickened the demand for radiators and boilers, the frequent call for these goods showing that there are some good heating jobs under way.

Range Boilers—Continued strength is the feature, and the following prices are firm: Iron clad: 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Fluctuations have occurred in pig lead, during the week, the tone on the whole being weaker. This has not affected pipe, however, and last week's figures are steady. We quote prices as follows: Discount 25 per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

Iron Pipe Fittings — A decidedly stronger tone is evident, denoting that an advance is immenent. Our quotations are: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—The firmness reported last week, due to shortage in some places, has been accentuated. We are still authorized, however, to quote the following prices: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent.; 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch, 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Soil Pipe and Fittings—As stated in our introduction, and as predicted last week, the price lists have been revised. The new lists show few changes, 5 per cent. extra being given on certain sizes. Generally, prices still remain: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—Tin and lead have both been subject to several fluctuations during the week, but at time of writing, while lead is somewhat weaker in tone, tin is correspondingly stronger, and we still quote: Bar solder half-and-half guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street east,
Toronto, September 15, 1905.

Brass goods, which were expected to advance during the past week, have not yet moved upward, but it is certain that a rise of about 10 per cent. will result in a very short time. Many houses in the United States and some in Canada have withdrawn the prices listed and are now quoting open figures. It is only a question of time before higher prices are listed.

Soil pipe continues very scarce and so long as this scarcity exists there is no possibility of lower quotations.

Iron pipe continues firm and large buying of both pipe and fittings is reported. Lead pipe is in strong demand and the recent advance has held quite firm. No reduction has been made on the quotation of solder, although the metal markets are slightly weaker.

Large business is reported from all sections of the country and orders are pouring in in the expectation that work must be booked now in order to have the work completed this Fall. Business in lighting fixtures is picking up and from now on there should be increased business in this direction. Heating jobs are also seasonable and large contracts are being made by the trade, while the supply houses are loaded up with business, being unable to keep up with their shipments.

Lead Pipe—Prices hold firm since the recent advances. We quote: Lead, 7c.; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—Shipments are behind owing to foundries being unable to fill orders. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Stocks are fairly large; prices continue firm. Quotations continue as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers—Buying continues active, prices being quite firm. We quote following prices: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Iron Pipe—Stocks are normal and prices continue steady. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Demand is strong and despite weaker conditions in metal markets, prices are firm at the old figures. Our quotations are as follows: Bar solder,

PLUMBING GOSSIP.

T. G. Barrington, plumber, 934 College street, Toronto, is building a two-story stable.

Mr. O. Charland, steamfitter, of Nicolet, was in Montreal calling on supply houses during the week.

Mr. E. Monbleau, steamfitter and machinist, of St. Johns, Que., called on the Montreal supply houses during the week.

Mr. Jas. Masklyne, of Pittsburg, Pa., is in Stratford installing two new benches for manufacturing gas at the gas works. This will double the capacity of the plant, bringing it up to about 80,000 cubic feet.

Mr. W. N. Falls, manager of the plumbing and steamfitting supplies department of Wm. Stairs Son & Morrow, Halifax, N.S., was in Montreal this week to meet Mrs. Falls, who arrived from England on the Tunisian.

Mr. Robert Ross, Toronto, ex-president of the National Association of Master Plumbers, has returned from his sojourn in the country and is lying seriously ill at his home. All his many friends hope to hear of his early recovery.

The Lunkenheimer Company, Cincinnati, Ohio, are making an interesting exhibit of their valves and engineers' supplies at the Steam Engineers' Convention at the Labor Temple in Toronto this week. Mr. J. T. Carland, their Canadian representative, and Mr. Wm. Schmidt, jr., from the head offices, are in charge.

Mr. Joseph Bourassa, a steamfitter, 38 years of age, was electrocuted by a live wire at the Angus shops of the C.P.R., Montreal, last Wednesday. The victim was making repairs in the power house, when he came in contact with the unprotected wire and dropped to the floor. A physician was summoned, but when he arrived Bourassa was dead. The body was taken to the morgue, where an inquest was held Thursday.

The Empire Gas Improvement and Construction Co. of New York City have been awarded the contract for the additions and improvements to the Guelph gas plant. There were four tenderers, but the New York company was the lowest, their estimate being $58,382. The other figures were: Canadian Gas Apparatus and Construction Co., Windsor, $64,000; Economical Gas Apparatus Construction Co., $66,153; John Coates & Co., London, Eng., and Ottawa, $68,875. The improvements will be started at once and the contract calls for the completion of the work by May 15th, 1906. A bond of $10,000 was furnished by the company.

Business Changes

Ontario.

Farwell & Noden, hardware merchants, Hamilton, are selling out.

R. J. Harmer, blacksmith, Fullarton, has advertised his business for sale.

Hughes & Hughes, agricultural implements, Kingston, have assigned to James G. MacNee.

The assets of the Canada Launch & Engine Works, Limited, Toronto, are for sale by tender by liquidator.

There was a meeting of the creditors of Hughes & Hughes, agricultural implements, Kingston, on the 18th inst.

Quebec.

Alex Desmarteau has been appointed curator to J. H. Blais, tinsmith, Napierville.

The buildings of E. M. Lapierre, hardware, Buckingham, have been damaged by fire.

Frank Reddaway, of F. Reddaway & Co., leather belting, etc., Montreal, has been registered.

Manitoba and N. W. T.

T. H. Strain, blacksmith, Melfort, has sold out to James Fowler.

George W. Mowat, hardware merchant, Winnipeg, has been succeeded by Daly & Wolloy.

T. J. Agnew, hardware merchant, Prince Albert, has been succeeded by the Agnew Bros. Hardware Co., Limited.

THE WRONG MAIN.

A story is told of a Connecticut plumber who made a ludicrous mistake. A resident who wished his house system of water supply connected with the city mains had a plumber to do the tapping, which he executed skilfully and quickly, then, going into the house, opened the kitchen faucet, expecting to have a rush of air, then a gush of muddy water; but instead, the air rushed out in an undiminished volume, and filled the house with an odor far more objectionable than any city water. Looking around for the mistake, the journeyman touched a lighted match to the faucet, and immediately a bright flame shot up, lighting the house and giving the plumber considerable enlightenment at the same time, for he had tapped the gas instead of the water main.

NOVELTY IN BATH TUBS.

A wooden bath tub, taken out of an old house in an eastern city, is described as being certainly unique. It is a tub manufactured by a cooper which carries all the marks of that trade. Composed of cedar strips, shaped like an old-fashioned foot-tub, this serviceable but obsolete work of art is held together by metal bands running parallel. While appearing much longer, its inside measurement is only five and a half feet. Without lining of any kind save a number of coats of paint, it suggests the thought that if Noah's Ark was constructed upon similar lines, its seaworthiness must have been all that is claimed for it.

BOOK REVIEWS

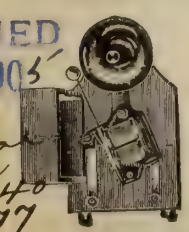
"Producer Gas," by A. Humboldt Sexton, F.I.C., F.C.S., Manchester, the Scientific Publishing Co., price ten shillings, net.

The production of this volume is the outcome of a series of lectures given by the author on "Producer Gas" at the Technical College, Glasgow. This volume treats in a comprehensive manner with the qualities of gas and its action, describing the different kinds of gas produced for industrial purposes. The matter of producers is taken up and discussed at some length in conjunction with the different gases to which they are adapted. The matter of cost is also dealt with. The book ends with a description of some of the most improved gas producers.

"Concrete, Plain and Reinforced." By Frederick W. Taylor, M.E., and Sanford E. Thomson, S.B., New York, John Wiley & Son.

In this book the materials, construction, and design of concrete and reinforced concrete are dealt with. In addition to the author's work, chapters are included by R. Feret, William B. Fuller, and Spencer B. Newberry. It is designed for the use of practicing engineers and contractors as well as a text and reference book for concrete and engineering students. It contains 585 pages and is copiously supplied with illustrations, diagrams and tables. In order that the reader may become fully familiar with the subject under discussion, the opening chapters deal with definitions of the different terms used. In the second chapter is given an elementary outline of the process of concreting, which is followed by chapters on specifications, the choice of cements and its classification, chemistry and special tests with the material, strength and composition, followed by a full discussion of the subject of reinforced concrete in its different applications, together with other information regarding the different processes of manufacture.

"Dimensions of Pipe Fittings and Valves." Second edition. By W. D. Browning, Cleveland. The Browning Press.



This is a practical book, well filled with sketches, diagrams and illustrations, together with tables and other valuable information regarding the subject mentioned. References are made in it to sources of more detailed information on the subject. This is the book that every plumber and steamfitter and engineer should have, as not only will its perusal increase his practical knowledge, but will give him a better insight into construction details of the materials he uses.

"Electricians' Handy Book." By Prof. T. O'Connor Sloane, A.M., E.M., Ph.D., New York; Norman W. Henley Publishing Co., pocketbook size, 610 engravings, 768 pages, bound in red leather, gold titles and edges; price $3.50.

The tendency towards standardization and simplification of electrical apparatus, as well as the need of a practical book that could be understood by the student, the practical worker, and the everyday working electrician, and yet be valuable to the consulting electrical engineer, has led to the production of this book. Its reception is not for a moment in doubt, as it fills the place in electrical practice not covered by any previously published volume. The entire electrical field is covered in the most practical manner in forty-one chapters. The ilustrations and diagrams are profusely used, thus simplifying the already clear and concise reading matter. It is the style of book that anyone desirous of becoming acquainted with the field of electricity would do well to procure, and at the same time its value as a book of reference is unquestionable.

A NEW WINDMILL.

THE one source of power bestowed by nature on the prairie farms of the country has heretofore proved largely unavailable because of the danger to machinery involved in permitting windmills to run during heavy storms. For a new invention it is claimed it will transmit power, says the Draftsman, not exceeding a predetermined limit, no matter how strong a wind is blowing. This new windmill has two wind wheels with sails oppositely inclined so they will run in opposite directions. As the velocity of the wind increases the wind wheels are tilted upwards, thus modifying the force of the wind on the sails. The shaft

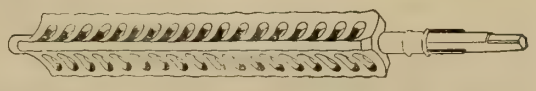
THE OXFORD BOILER

Nothing in the way of Heating Apparatus for modern homes has ever equalled The Oxford Hot Water Boiler ("B" Series.")

Its constructional detail is scientifically perfect and results in a greater utilization of a given amount of generated heat, and a lesser waste of it up the chimney than any other boiler made.



The walls of the firepot slope inward above the fire and the heat impinges thereon in its upward course with consequent absorption, utilization and fuel economy. The same action ensues as the heat strikes the first water section which is deeper than the others, and provided with bell-shaped flues to secure maximum heating surface.

All sections are joined by tapered steel push nipples which do away with the use of rubber gaskets or packing of any kind. This makes a "metal to metal" unleakable joint.

Our hollow grate bar provides for ample draft and complete or partial removal of ashes.

We would like to send you our free catalogue giving full details of the Gurney Oxford Steam and Hot Water Heating Apparatus.

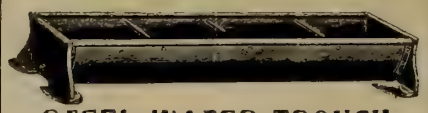
TELEPHONE, MAIN 3389

of the inner wheel is hollow and revolves on the shaft of the outer wheel, and the bracket in which the shafts are mounted has a universal joint connection with the windmill standard, an adjustable counter-weight balancing the weight of the wind wheels.



The shafts carry bevel gears at their inner ends, that of inner wind wheel engaging the upper teeth of the power wheel, while the gear attached to the shaft of the outer wind wheel engages the lower teeth of the power wheels. Consequently, although the wind wheels turn in opposite directions, they both act together in driving the power shaft in the same direction. A blade or sail lying adjacent to and below the level of the wind wheels forms the vane of the mill, which occupies a plane normally transverse to the direction of the wind. As the strength of the wind increases the wind wheels rise because of the pressure against this vane, and the wheels then rotate at an acute angle to the direction of the wind. In this way the force of wind on the wheels is modified, for any increase in velocity will be compensated for by an increase in the angle between the axis of the wheel and the direction of the wind.

NEW ROLLING MILLS FOR QUEBEC.

Rumors are afloat in Montreal, that an American firm is considering the establishment of rolling mills, in the province, probably in Quebec City. Color is given to these reports by the fact that several prominent metal men in Montreal were interviewed last week by gentlemen representing large American interests.

Every hardware merchant should choose a good washing machine and push it amongst his customers. Every household is a possible customer.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MacLEAN PUBLISHING CO., Limited

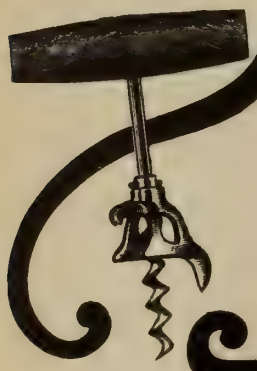
BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.



THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information nc effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

WALTER GROSE, Montreal, SELLING AGENT FOR THE DOMINION.

The Fisk Detachable Motor Tire

Some of the things that experts say about it;

"Fisk Tires are giving us such excellent satisfaction and are making friends so fast among those who are using them that it will soon be impossible to sell anything else, regardless of what effort the salesman may make on other tires."

"I recommend them to anyone desiring a tire that is very easy riding, that will stand a great amount of wear, that does not blow off or roll off the rim and, above all, that can be detached and replaced by any one not a tire expert."

"We congratulate you on having in this tire a construction that seems to solve the tire question."
